- **HIV-protease inhibitors** are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Idelalisib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Imatinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Moderate Study
- **Letermovir** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Moderate Study
- **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Ivacaftor** is predicted to increase the exposure to **loperamide**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ivacaftor**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Moderate Study
- **Ivacaftor** is predicted to increase the exposure to **nintedanib**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ivacaftor**. Moderate Study
- **Ivacaftor** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **Ivacaftor** is predicted to increase the exposure to **sirolimus**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **Ivacaftor** is predicted to increase the exposure to **tacrolimus**. Moderate Theoretical
- **Ivacaftor** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Ivacaftor** is predicted to increase the exposure to taxanes **(docetaxel)** (oral). Unknown Theoretical
- **Ivacaftor** is predicted to increase the exposure to taxanes **(paclitaxel)** (oral). Unknown Study
- **Ivacaftor** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Moderate Study
- **Ivacaftor** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Ivacaftor** is predicted to increase the exposure to **topotecan**. Severe Study
- **Ivacaftor** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Ivacaftor** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Ivacaftor** might increase the exposure to **vinca alkaloids**. Severe Theoretical

Ivermectin

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Ivermectin** potentially increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Levamisole** increases the exposure to **ivermectin**. Moderate Study

Ixazomib

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Theoretical

Ixekizumab → see monoclonal antibodies

Kaolin

- Oral **kaolin** decreases the absorption of oral antimalarials **(chloroquine)**. Separate administration by at least 4 hours. Moderate Study
- Oral **kaolin** is predicted to decrease the absorption of oral **hydroxychloroquine**. Moderate Theoretical
- Oral **kaolin** is predicted to decrease the absorption of oral **tetracyclines**. Moderate Theoretical

Ketamine → see **TABLE 8** p. 1491 (hypotension), **TABLE 11** p. 1492 (CNS depressant effects)

- **Ketamine** is predicted to increase the risk of elevated blood pressure when given with **ergometrine**. Severe Theoretical
- **Memantine** is predicted to increase the risk of CNS adverse effects when given with **ketamine**. Avoid. Severe Theoretical

Ketoconazole → see antifungals, azoles

Ketoprofen → see NSAIDs

Ketorolac → see NSAIDs

Ketotifen → see antihistamines, sedating

Labetalol → see beta blockers, non-selective

Lacidipine → see calcium channel blockers

Lacosamide → see antiepileptics

Lamivudine → see NRTIs

Lamotrigine → see antiepileptics

Lanreotide

- **Beta blockers, non-selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. Moderate Theoretical
- **Beta blockers, selective** are predicted to increase the risk of bradycardia when given with **lanreotide**. Moderate Theoretical
- **Lanreotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. Severe Theoretical

Lansoprazole → see proton pump inhibitors

Lanthanum

- **Lanthanum** is predicted to decrease the absorption of antifungals, azoles **(ketoconazole)**. Separate administration by at least 2 hours. Moderate Theoretical
- **Lanthanum** is predicted to decrease the absorption of antimalarials **(chloroquine)**. Separate administration by at least 2 hours. Moderate Theoretical
- **Lanthanum** is predicted to decrease the absorption of **hydroxychloroquine**. Separate administration by at least 2 hours. Moderate Theoretical
- **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. Moderate Study
- Oral **lanthanum** might decrease the absorption of oral **tetracyclines**. Separate administration by 2 hours. Moderate Theoretical
- **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. Moderate Study

Lapatinib → see **TABLE 9** p. 1492 (QT-interval prolongation)

- **Lapatinib** is predicted to increase the exposure to **afatinib**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **aliskiren**. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **alpelisib**. Moderate Theoretical
- Oral **antacids** is predicted to decrease the absorption of oral **lapatinib**. Avoid. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1492
- **Lapatinib** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **berotralstat**. Severe Study
- **Lapatinib** is predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **lapatinib**. Moderate Study
- Oral calcium salts **(calcium carbonate)** -containing antacids are predicted to decrease the absorption of oral **lapatinib**. Avoid. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **ceritinib**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Ciclosporin** might increase the concentration of **lapatinib**. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. Moderate Theoretical
- **Lapatinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Dabrafenib** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Lapatinib** is predicted to increase the exposure to **digoxin**. Moderate Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Lapatinib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **everolimus**. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to factor XA inhibitors **(apixaban)**. Moderate Theoretical
- **Lapatinib** is predicted to slightly increase the exposure to factor XA inhibitors **(edoxaban)**. Severe Theoretical
- **Lapatinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **gilteritinib**. Moderate Theoretical
- **Grapefruit** juice is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the absorption of **lapatinib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study
- **Imatinib** is predicted to increase the exposure to **lapatinib**. Moderate Study
- **Lapatinib** increases the exposure to the active metabolite of **irinotecan**. Monitor adverse effects and adjust dose. Severe Study
- **Lapatinib** is predicted to increase the exposure to **larotrectinib**. Mild Theoretical
- **Letermovir** is predicted to increase the exposure to **lapatinib**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- **Lapatinib** is predicted to increase the exposure to **loperamide**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1492
- Macrolides **(erythromycin)** are predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **lapatinib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Lapatinib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Lapatinib** increases the exposure to **pazopanib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical

Lapatinib (continued)

- **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical
- **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Theoretical
- **Lapatinib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Lapatinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Lapatinib** is predicted to increase the exposure to **sirolimus**. Moderate Theoretical
- Oral **sodium bicarbonate**-containing antacids are predicted to decrease the absorption of oral **lapatinib**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Lapatinib** slightly increases the exposure to taxanes **(paclitaxel)**. Severe Study
- **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Severe Theoretical
- **Lapatinib** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Lapatinib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Lapatinib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Lapatinib** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492

Laronidase

- Antimalarials **(chloroquine)** are predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. Severe Theoretical
- **Hydroxychloroquine** is predicted to decrease the exposure to **laronidase**. Avoid simultaneous administration. Severe Theoretical

Larotrectinib

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **larotrectinib**. Mild Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. Moderate Study
- **Larotrectinib** slightly increases the exposure to benzodiazepines **(midazolam)**. Use with caution and adjust dose. Mild Study
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **larotrectinib**. Mild Theoretical
- **Ciclosporin** is predicted to increase the exposure to **larotrectinib**. Mild Study
- **Cobicistat** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. Moderate Study
- **Larotrectinib** potentially decreases the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. Severe Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- **Eltrombopag** is predicted to increase the exposure to **larotrectinib**. Mild Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- **Larotrectinib** is predicted to increase the exposure to **ergotamine**. Use with caution and adjust dose. Mild Theoretical
- **Grapefruit** juice is predicted to increase the exposure to **larotrectinib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. Moderate Study
- **Idelalisib** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **larotrectinib**. Mild Theoretical
- **Leflunomide** is predicted to increase the exposure to **larotrectinib**. Mild Study
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **larotrectinib**. Mild Theoretical
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- **Larotrectinib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Use with caution and adjust dose. Mild Theoretical
- **Larotrectinib** is predicted to increase the exposure to **pimozide**. Use with caution and adjust dose. Mild Theoretical
- **Ranolazine** is predicted to increase the exposure to **larotrectinib**. Mild Theoretical
- Rifamycins **(rifampicin)** are predicted to moderately decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- **Larotrectinib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. Mild Theoretical
- **St John's wort** is predicted to decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. Mild Theoretical
- **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. Mild Study
- **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. Mild Theoretical

Ledipasvir

- Oral **antacids** are predicted to decrease the exposure to oral **ledipasvir**. Separate administration by 4 hours. Moderate Theoretical
- **Ledipasvir** increases the risk of severe bradycardia or heart block when given with antiarrhythmics **(amiodarone)**. Refer to specialist literature. Severe Anecdotal
- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Study
- Antiepileptics **(fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Theoretical
- Calcium salts **(calcium carbonate)** are predicted to decrease the exposure to **ledipasvir**. Separate administration by 4 hours. Moderate Theoretical
- **Ledipasvir** is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683. Moderate Study
- HIV-protease inhibitors **(tipranavir)** boosted with ritonavir are predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683. Moderate Theoretical
- Rifamycins **(rifabutin)** are predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Study
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by at least 2 hours. Moderate Theoretical

- **St John's wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Study
- **Ledipasvir** with sofosbuvir is predicted to increase the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Moderate Anecdotal
- **Ledipasvir** with sofosbuvir is predicted to increase the exposure to statins **(fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. Moderate Theoretical
- **Ledipasvir** with sofosbuvir is predicted to increase the exposure to statins **(rosuvastatin)**. Avoid. Severe Theoretical
- **Ledipasvir** with sofosbuvir slightly increases the exposure to **tenofovir disoproxil**. Moderate Study
- **Ledipasvir** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Moderate Theoretical

Leflunomide → see **TABLE 1** p. 1490 (hepatotoxicity), **TABLE 15** p. 1493 (myelosuppression)

PHARMACOLOGY Leflunomide has a long half-life; washout procedure recommended before switching to other DMARDs (consult product literature).

- **Leflunomide** is predicted to increase the exposure to **adefovir**. Moderate Theoretical
- **Leflunomide** is predicted to decrease the exposure to **agomelatine**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **alpelisib**. Moderate Theoretical
- **Leflunomide** decreases the exposure to **aminophylline**. Adjust dose. Moderate Study
- **Leflunomide** is predicted to decrease the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to anthracyclines **(daunorubicin, doxorubicin, mitoxantrone)**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Leflunomide** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Study
- **Leflunomide** is predicted to decrease the exposure to antipsychotics, second generation **(clozapine)**. Moderate Theoretical
- **Leflunomide** is predicted to decrease the exposure to antipsychotics, second generation **(olanzapine)**. Monitor and adjust dose. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **baricitinib**. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **berotralstat**. Severe Theoretical
- **Leflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- **Leflunomide** is predicted to increase the exposure to cephalosporins **(cefaclor)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Leflunomide** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Leflunomide** is predicted to increase the exposure to endothelin receptor antagonists **(bosentan)**. Moderate Study
- **Filgotinib** is predicted to increase the risk of immunosuppression when given with **leflunomide**. Avoid. Severe Theoretical
- **Leflunomide** is predicted to increase the exposure to **ganciclovir**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Leflunomide** is predicted to increase the exposure to H_2 receptor antagonists **(cimetidine, famotidine)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **larotrectinib**. Mild Study
- **Leflunomide** is predicted to increase the concentration of **letermovir**. Moderate Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Leflunomide** is predicted to increase the exposure to loop diuretics **(furosemide)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to meglitinides **(repaglinide)**. Moderate Study
- **Leflunomide** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **methotrexate**. Moderate Theoretical → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **montelukast**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to NRTIs **(zidovudine)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to NSAIDs **(indometacin, ketoprofen)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **oseltamivir**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. Moderate Study
- **Leflunomide** is predicted to increase the exposure to penicillins **(benzylpenicillin)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **pioglitazone**. Moderate Study
- **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to quinolones **(ciprofloxacin)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to rifamycins **(rifampicin)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. Moderate Study
- **Leflunomide** is predicted to decrease the exposure to SNRIs **(duloxetine)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, pravastatin, simvastatin)**. Moderate Study → Also see **TABLE 1** p. 1490
- **Leflunomide** is predicted to increase the exposure to statins **(rosuvastatin)**. Adjust dose. Moderate Study → Also see **TABLE 1** p. 1490
- **Leflunomide** is predicted to increase the exposure to **sulfasalazine**. Moderate Study → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- **Leflunomide** is predicted to increase the exposure to sulfonylureas **(glibenclamide)**. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Leflunomide** is predicted to increase the concentration of taxanes **(paclitaxel)**. Severe Anecdotal → Also see **TABLE 15** p. 1493
- **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. Moderate Theoretical
- **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Leflunomide** moderately decreases the exposure to **tizanidine**. Mild Study
- **Leflunomide** is predicted to increase the exposure to **topotecan**. Moderate Study → Also see **TABLE 15** p. 1493
- **Leflunomide** is predicted to increase the exposure to **tucatinib**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical

Lenalidomide → see **TABLE 1** p. 1490 (hepatotoxicity), **TABLE 15** p. 1493 (myelosuppression), **TABLE 5** p. 1491 (thromboembolism)

- **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Avoid. Severe Theoretical
- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **lenalidomide**. Moderate Theoretical

Lenvatinib → see **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 4** p. 1490 (antiplatelet effects)

Lercanidipine → see calcium channel blockers

Letermovir

- **Letermovir** is predicted to increase the exposure to **abemaciclib**. Moderate Study

Letermovir (continued)

- **Letermovir** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. Severe Study
- **Letermovir** is predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 210. Severe Study
- **Letermovir** is predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- **Letermovir** is predicted to increase the concentration of antiarrhythmics **(amiodarone)**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, phenobarbital, primidone)** are predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- **Letermovir** is predicted to decrease the concentration of antiepileptics **(fosphenytoin, phenytoin)** and antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- **Letermovir** slightly decreases the exposure to antifungals, azoles **(voriconazole)**. Moderate Study
- **Letermovir** is predicted to increase the concentration of antihistamines, non-sedating **(fexofenadine)**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Letermovir** is predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to antipsychotics, second generation **(cariprazine)**. Avoid. Severe Study
- **Letermovir** is predicted to increase the exposure to antipsychotics, second generation **(quetiapine)**. Avoid. Moderate Study
- **Letermovir** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose, p. 1045. Moderate Study
- **Letermovir** is predicted to increase the exposure to **axitinib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical
- **Letermovir** is predicted to increase the exposure to benzodiazepines **(alprazolam)**. Severe Study
- **Letermovir** is predicted to increase the exposure to benzodiazepines **(midazolam)**. Monitor adverse effects and adjust dose. Severe Study
- **Letermovir** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study
- **Letermovir** is predicted to increase the exposure to **brigatinib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Letermovir** is predicted to increase the exposure to **cabozantinib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Letermovir** is predicted to increase the exposure to **ceritinib**. Moderate Study
- **Letermovir** increases the exposure to **ciclosporin** and **ciclosporin** increases the exposure to **letermovir**. Monitor and adjust **letermovir** dose, p. 693. Severe Study
- **Letermovir** is predicted to increase the exposure to **cobimetinib**. Severe Study
- **Letermovir** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. Severe Study
- **Letermovir** is predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Letermovir** is predicted to decrease the concentration of coumarins **(warfarin)**. Monitor and adjust dose. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **crizotinib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **dabrafenib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **darifenacin**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **dasatinib**. Severe Study
- **Letermovir** is predicted to slightly increase the exposure to **dienogest**. Moderate Study
- **Letermovir** is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors **(saxagliptin)**. Mild Study
- **Letermovir** is predicted to increase the exposure to **domperidone**. Avoid. Severe Study
- **Letermovir** is predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- **Letermovir** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Letermovir** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Eltrombopag** is predicted to increase the concentration of **letermovir**. Moderate Study
- **Letermovir** is predicted to moderately increase the exposure to **encorafenib**. Moderate Study
- **Letermovir** is predicted to increase the concentration of endothelin receptor antagonists **(bosentan)**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. Severe Theoretical
- **Letermovir** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Letermovir** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to **erlotinib**. Moderate Study
- **Letermovir** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Letermovir** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. Moderate Study
- **Letermovir** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. Mild Study
- Fibrates **(gemfibrozil)** are predicted to increase the concentration of **letermovir**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **gefitinib**. Moderate Study
- **Letermovir** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. Moderate Theoretical
- HIV-protease inhibitors **(atazanavir, lopinavir)** boosted with ritonavir are predicted to increase the concentration of **letermovir**. Moderate Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. Severe Study
- **Letermovir** is predicted to increase the exposure to **imatinib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Moderate Study
- **Letermovir** is predicted to increase the exposure to **lapatinib**. Moderate Study
- **Leflunomide** is predicted to increase the concentration of **letermovir**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the concentration of **letermovir**. Moderate Study
- **Letermovir** is predicted to increase the concentration of meglitinides **(repaglinide)**. Avoid. Moderate Theoretical

- **Letermovir** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Modafinil** is predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **naldemedine**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- **Letermovir** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- **Letermovir** is predicted to increase the exposure to **nilotinib**. Moderate Study
- NNRTIs **(efavirenz)** are predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- NNRTIs **(etravirine)** are predicted to decrease the exposure to **letermovir**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Letermovir** is predicted to increase the exposure to opioids **(methadone)**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **pazopanib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **pemigatinib**. Severe Study
- **Letermovir** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study
- **Letermovir** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to **ponatinib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **ranolazine**. Severe Study
- **Letermovir** is predicted to increase the exposure to **regorafenib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **ribociclib**. Moderate Study
- Rifamycins **(rifabutin)** are predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to affect the concentration of **letermovir**. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to **ruxolitinib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **selpercatinib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Letermovir** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study
- **Letermovir** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Letermovir** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- **St John's wort** is predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- **Letermovir** moderately increases the exposure to statins **(atorvastatin)**. Avoid or adjust **atorvastatin** dose, p. 220. Severe Study
- **Letermovir** is predicted to increase the exposure to statins **(fluvastatin)**. Monitor and adjust dose. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to statins **(pravastatin)**. Avoid or adjust dose. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to statins **(rosuvastatin, simvastatin)**. Avoid. Severe Study
- **Letermovir** is predicted to increase the concentration of sulfonylureas **(glibenclamide)**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **sunitinib**. Moderate Study
- **Letermovir** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Letermovir** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to taxanes **(docetaxel)**. Severe Study
- **Letermovir** is predicted to increase the exposure to taxanes **(paclitaxel)**. Moderate Anecdotal
- **Teriflunomide** is predicted to increase the concentration of **letermovir**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Letermovir** is predicted to decrease the concentration of thrombin inhibitors **(dabigatran)**. Avoid. Severe Theoretical
- **Letermovir** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Letermovir** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- **Letermovir** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Letermovir** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Letermovir** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Levamisole

- **Albendazole** slightly decreases the exposure to **levamisole** and **levamisole** moderately decreases the exposure to **albendazole**. Moderate Study
- **Alcohol** potentially causes a disulfiram-like reaction when given with **levamisole**. Moderate Study
- **Levamisole** increases the exposure to **ivermectin**. Moderate Study

Levetiracetam → see antiepileptics

Levobunolol → see beta blockers, non-selective

Levobupivacaine → see anaesthetics, local

Levocetirizine → see antihistamines, non-sedating

Levodopa → see **TABLE 8** p. 1491 (hypotension)

- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of **levodopa**. Moderate Study
- Antipsychotics, second generation **(amisulpride)** are predicted to decrease the effects of **levodopa**. Avoid. Severe Theoretical
- Antipsychotics, second generation **(aripiprazole, clozapine, lurasidone, paliperidone)** are predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1491
- Antipsychotics, second generation **(asenapine)** are predicted to decrease the effects of **levodopa**. Adjust dose. Severe Theoretical → Also see **TABLE 8** p. 1491
- Antipsychotics, second generation **(olanzapine)** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Anecdotal → Also see **TABLE 8** p. 1491
- Antipsychotics, second generation **(quetiapine)** decrease the effects of **levodopa**. Severe Anecdotal → Also see **TABLE 8** p. 1491

Levodopa (continued)
- Antipsychotics, second generation **(risperidone)** are predicted to decrease the effects of **levodopa**. Avoid or adjust dose. Severe Anecdotal → Also see **TABLE 8** p. 1491
- **Baclofen** is predicted to increase the risk of adverse effects when given with **levodopa**. Severe Anecdotal → Also see **TABLE 8** p. 1491
- **Benperidol** is predicted to decrease the effects of **levodopa**. Severe Study → Also see **TABLE 8** p. 1491
- **Bupropion** increases the risk of adverse effects when given with **levodopa**. Moderate Study
- **Droperidol** decreases the effects of **levodopa**. Severe Study → Also see **TABLE 8** p. 1491
- **Drugs with antimuscarinic effects** (see **TABLE 10** p. 1492) decrease the absorption of **levodopa**. Moderate Theoretical
- **Entacapone** increases the exposure to **levodopa**. Monitor adverse effects and adjust dose. Moderate Study
- **Flupentixol** decreases the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Haloperidol** decreases the effects of **levodopa**. Severe Study → Also see **TABLE 8** p. 1491
- Oral **iron** decreases the absorption of oral **levodopa**. Moderate Study
- **Isoniazid** decreases the effects of **levodopa**. Moderate Study
- **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Loxapine** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1491
- **MAO-B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. Mild Study → Also see **TABLE 8** p. 1491
- **Levodopa** increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Study → Also see **TABLE 8** p. 1491
- **Memantine** is predicted to increase the effects of **levodopa**. Moderate Theoretical
- **Metoclopramide** decreases the effects of **levodopa**. Avoid. Moderate Study
- **Levodopa** increases the risk of adverse effects when given with **moclobemide**. Moderate Study
- **Opicapone** increases the exposure to **levodopa**. Adjust dose. Moderate Study
- **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Study → Also see **TABLE 8** p. 1491
- **Pimozide** decreases the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Sulpiride** is predicted to decrease the effects of **levodopa**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. Moderate Theoretical
- **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. Moderate Study
- **Tryptophan** greatly decreases the concentration of **levodopa**. Moderate Study
- **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Theoretical → Also see **TABLE 8** p. 1491

Levofloxacin → see quinolones

Levofolinic acid → see folates

Levomepromazine → see phenothiazines

Levonorgestrel
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Griseofulvin** potentially decreases the efficacy of oral **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Rifamycins** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **St John's wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Levonorgestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **levonorgestrel**. Avoid. Severe Theoretical

Levothyroxine → see thyroid hormones

Lidocaine → see antiarrhythmics

Linagliptin → see dipeptidylpeptidase-4 inhibitors

Linezolid → see **TABLE 13** p. 1493 (serotonin syndrome)

FOOD AND LIFESTYLE Patients taking linezolid should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- **Beta$_2$ agonists** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Bupropion** is predicted to increase the risk of intraoperative hypertension when given with **linezolid**. Severe Anecdotal
- **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Levodopa** is predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** increase the exposure to **linezolid**. Moderate Anecdotal
- MAO-B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1493
- MAO-B inhibitors **(safinamide)** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Methylphenidate** might increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Moclobemide** is predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Ozanimod** might increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. Severe Theoretical
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. Severe Theoretical
- Rifamycins **(rifampicin)** slightly decrease the exposure to **linezolid**. Moderate Study
- **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical

- Sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- Sympathomimetics, vasoconstrictor **(pseudoephedrine)** increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Study

Liothyronine → see thyroid hormones

Liraglutide → see glucagon-like peptide-1 receptor agonists

Lisdexamfetamine → see amfetamines

Lisinopril → see ACE inhibitors

Lithium → see **TABLE 13** p. 1493 (serotonin syndrome), **TABLE 9** p. 1492 (QT-interval prolongation)

- **ACE inhibitors** are predicted to increase the concentration of **lithium**. Monitor and adjust dose. Severe Anecdotal
- **Acetazolamide** alters the concentration of **lithium**. Severe Anecdotal
- Aldosterone antagonists **(eplerenone)** potentially increase the concentration of **lithium**. Avoid. Moderate Theoretical
- Aldosterone antagonists **(spironolactone)** potentially increase the concentration of **lithium**. Moderate Study
- **Aminophylline** is predicted to decrease the concentration of **lithium**. Moderate Theoretical
- **Angiotensin-II receptor antagonists** potentially increase the concentration of **lithium**. Monitor concentration and adjust dose. Severe Anecdotal
- Antiepileptics **(carbamazepine, oxcarbazepine)** are predicted to increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- Antipsychotics, second generation **(quetiapine, risperidone)** potentially increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1492
- **Calcitonins** decrease the concentration of **lithium**. Adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. Severe Study
- **Methyldopa** increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal
- **Metronidazole** is predicted to increase the concentration of **lithium**. Avoid or adjust dose. Severe Anecdotal
- **Mexiletine** potentially affects the exposure to **lithium**. Avoid. Unknown Theoretical
- **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. Severe Study
- **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1492
- Potassium-sparing diuretics **(triamterene)** potentially increase the clearance of **lithium**. Moderate Study
- **Sodium bicarbonate** decreases the concentration of **lithium**. Severe Anecdotal
- **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1492
- **Tetracyclines** are predicted to increase the risk of lithium toxicity when given with **lithium**. Avoid or adjust dose. Severe Anecdotal
- **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. Moderate Anecdotal
- **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. Severe Study
- **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 13** p. 1493 → Also see **TABLE 9** p. 1492
- **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1492

Live vaccines

Bacillus Calmette-Guérin vaccine • herpes-zoster vaccine, live • influenza vaccine (live) • measles, mumps and rubella vaccine, live • rotavirus vaccine • typhoid vaccine, oral • varicella-zoster vaccine • yellow fever vaccine, live

GENERAL INFORMATION **Oral typhoid vaccine** is inactivated by concurrent administration of antibacterials or antimalarials: antibacterials should be avoided for 3 days before and after oral typhoid vaccination; *mefloquine* should be avoided for at least 12 hours before or after oral typhoid vaccination; for other antimalarials oral typhoid vaccine vaccination should be completed at least 3 days before the first dose of the antimalarial (except proguanil hydrochloride with atovaquone, which can be given concurrently).

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abrocitinib**. Avoid. Severe Theoretical
- **Aciclovir** is predicted to decrease the efficacy of **herpes-zoster vaccine, live**. Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **alkylating agents**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **amsacrine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anthracyclines**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **azathioprine** (high-dose). UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **baricitinib**. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **belatacept**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **bleomycin**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **capecitabine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ciclosporin**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cladribine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **clofarabine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **corticosteroids** (high-dose). UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **cytarabine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical

Live vaccines (continued)

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dactinomycin**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **dimethyl fumarate**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **diroximel fumarate**. Use with caution or avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etanercept**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **etoposide**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **everolimus**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Famciclovir** is predicted to decrease the efficacy of **herpes-zoster vaccine, live.** Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **filgotinib**. Avoid. Severe Theoretical
- **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fludarabine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fluorouracil**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **gemcitabine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **hydroxycarbamide**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- Immunoglobulins **(cytomegalovirus immunoglobulin)** are predicted to decrease the exposure to **varicella-zoster vaccine**. Avoid and for 3 months after stopping **cytomegalovirus immunoglobulin.** Moderate Theoretical
- Immunoglobulins **(varicella-zoster immunoglobulin)** are predicted to decrease the efficacy of **herpes-zoster vaccine, live**. Avoid and for 3 months after stopping **varicella-zoster immunoglobulin.** Moderate Theoretical
- Immunoglobulins **(varicella-zoster immunoglobulin)** are predicted to decrease efficacy **measles, mumps and rubella vaccine, live**. Avoid and for at least 3 months after stopping **varicella-zoster immunoglobulin**. Moderate Theoretical
- Immunoglobulins **(cytomegalovirus immunoglobulin)** are predicted to decrease the efficacy of live vaccines **(Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral)**. Avoid and for 3 months after stopping **cytomegalovirus immunoglobulin**. Moderate Theoretical
- Immunoglobulins **(anti-D (Rh$_0$) immunoglobulin)** are predicted to decrease the efficacy of live vaccines **(Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine)**. Avoid and for 3 months after stopping **anti-D (Rh$_0$) immunoglobulin**. Moderate Theoretical
- Immunoglobulins **(normal immunoglobulin)** are predicted to decrease the efficacy of live vaccines **(Bacillus Calmette-Guérin vaccine, herpes-zoster vaccine, live, influenza vaccine (live), measles, mumps and rubella vaccine, live, rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine)**. Avoid and for 3 months after stopping **normal immunoglobulin**. Moderate Theoretical
- Immunoglobulins **(varicella-zoster immunoglobulin)** are predicted to decrease the efficacy of live vaccines **(Bacillus Calmette-Guérin vaccine, influenza vaccine (live), rotavirus vaccine, typhoid vaccine, oral, varicella-zoster vaccine)**. Avoid and for at least 3 months after stopping **varicella-zoster immunoglobulin.** Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **irinotecan**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with iron chelators **(dexrazoxane)**. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **leflunomide**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- Live vaccines **(measles, mumps and rubella vaccine, live)** might decrease the efficacy of live vaccines **(herpes-zoster vaccine, live).** Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid and for 3 months after stopping **ozanimod.** Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **ponesimod**. Avoid and for 1 week after stopping **ponesimod.** Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid and for 4 weeks after stopping **siponimod**. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with

sirolimus. UKHSA advises avoid (refer to Green Book). Severe Theoretical

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **streptozocin**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes **(docetaxel, paclitaxel)**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **upadacitinib**. Avoid. Severe Theoretical
- **Valaciclovir** is predicted to decrease the efficacy of **herpes-zoster vaccine, live**. Moderate Theoretical
- **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. UKHSA advises avoid (refer to Green Book). Severe Theoretical

Lixisenatide → see glucagon-like peptide-1 receptor agonists

Lofepramine → see tricyclic antidepressants

Lofexidine → see **TABLE 8** p. 1491 (hypotension), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 11** p. 1492 (CNS depressant effects)

Lomitapide → see **TABLE 1** p. 1490 (hepatotoxicity)

FOOD AND LIFESTYLE Bitter (Seville) orange is predicted to increase the exposure to lomitapide; separate administration by 12 hours.

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- Anti-androgens **(bicalutamide)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 1** p. 1490
- Antifungals, azoles **(clotrimazole)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical → Also see **TABLE 1** p. 1490
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study → Also see **TABLE 1** p. 1490
- Benzodiazepines **(alprazolam)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Calcium channel blockers **(amlodipine, lacidipine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Cenobamate** is predicted to decrease the exposure to **lomitapide**. Adjust dose. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Cilostazol** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- Oral **combined hormonal contraceptives** slightly increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Lomitapide** increases the exposure to coumarins **(warfarin)**. Monitor INR and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- Dipeptidylpeptidase-4 inhibitors **(linagliptin)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Everolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- **Grapefruit** juice is predicted to increase the exposure to **lomitapide**. Avoid. Mild Theoretical
- H_2 receptor antagonists **(cimetidine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- H_2 receptor antagonists **(ranitidine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Isoniazid** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Unknown Theoretical → Also see **TABLE 1** p. 1490
- **Ivacaftor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Lapatinib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- **Letermovir** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- Macrolides **(azithromycin)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(fosaprepitant)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical

Lomitapide (continued)

- **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **lomitapide**. Avoid. Severe Theoretical
- **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- **Peppermint** oil is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- SSRIs **(fluoxetine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Unknown Theoretical
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- **Lomitapide** increases the exposure to statins **(atorvastatin)**. Adjust **lomitapide** dose or separate administration by 12 hours, p. 226. Mild Study → Also see **TABLE 1** p. 1490
- **Lomitapide** increases the exposure to statins **(simvastatin)**. Monitor and adjust **simvastatin** dose, p. 222. Moderate Study → Also see **TABLE 1** p. 1490
- **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **lomitapide**. Avoid or adjust dose. Moderate Theoretical

Lomustine → see alkylating agents

Loop diuretics → see **TABLE 18** p. 1494 (hyponatraemia), **TABLE 8** p. 1491 (hypotension), **TABLE 19** p. 1494 (ototoxicity), **TABLE 17** p. 1494 (reduced serum potassium)

bumetanide • furosemide • torasemide

- **Aliskiren** slightly decreases the exposure to **furosemide**. Moderate Study → Also see **TABLE 8** p. 1491
- **Loop diuretics** increase the risk of nephrotoxicity when given with **aminoglycosides**. Avoid. Moderate Study → Also see **TABLE 19** p. 1494
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of **furosemide**. Moderate Study
- Intravenous **furosemide** potentially increases the risk of sweating, variable blood pressure, and tachycardia when given after **chloral hydrate**. Moderate Anecdotal
- Immunoglobulins **(cytomegalovirus immunoglobulin)** are predicted to increase the risk of adverse effects when given with **loop diuretics**. Avoid. Moderate Theoretical
- **Loop diuretics** might increase the risk of adverse effects when given with immunoglobulins **(normal immunoglobulin)**. Avoid. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **furosemide**. Moderate Theoretical
- **Loop diuretics** increase the concentration of **lithium**. Monitor and adjust dose. Severe Study
- **Nitisinone** is predicted to increase the exposure to **furosemide**. Moderate Study
- **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. Moderate Theoretical
- **Selpercatinib** is predicted to increase the exposure to **torasemide**. Avoid. Severe Study
- **Teriflunomide** is predicted to increase the exposure to **furosemide**. Moderate Study
- **Furosemide** might slightly decrease the clearance of **treprostinil**. Unknown Theoretical → Also see **TABLE 8** p. 1491

Loperamide

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **loperamide**. Severe Theoretical
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **loperamide**; concurrent use might increase the risk of developing intestinal obstruction. Severe Anecdotal
- **Berotralstat** is predicted to increase the concentration of **loperamide**. Monitor and adjust dose. Moderate Study
- **Ceritinib** is predicted to increase the exposure to **loperamide**. Moderate Theoretical
- **Loperamide** greatly increases the absorption of oral **desmopressin** (and possibly sublingual). Moderate Study
- **Eliglustat** is predicted to increase the exposure to **loperamide**. Adjust dose. Moderate Study
- **Ibrutinib** is predicted to increase the exposure to **loperamide**. Separate administration by at least 6 hours. Moderate Theoretical
- **Ivacaftor** is predicted to increase the exposure to **loperamide**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **loperamide**. Moderate Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **loperamide**. Moderate Study
- **Mifepristone** is predicted to increase the exposure to **loperamide**. Moderate Theoretical
- **Mirabegron** is predicted to increase the exposure to **loperamide**. Mild Theoretical
- **Neratinib** is predicted to increase the exposure to **loperamide**. Moderate Study
- **Olaparib** might increase the exposure to **loperamide**. Moderate Theoretical
- **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. Moderate Study
- **Osimertinib** is predicted to increase the exposure to **loperamide**. Moderate Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **loperamide**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **loperamide**. Mild Theoretical
- **Sotorasib** is predicted to increase the exposure to **loperamide**. Avoid or adjust dose. Moderate Study
- **Tepotinib** is predicted to increase the concentration of **loperamide**. Severe Study
- **Tucatinib** is predicted to increase the exposure to **loperamide**. Use with caution and adjust dose. Moderate Theoretical
- **Vandetanib** is predicted to increase the exposure to **loperamide**. Moderate Study
- **Velpatasvir** is predicted to increase the exposure to **loperamide**. Severe Theoretical
- **Vemurafenib** might increase the exposure to **loperamide**. Use with caution and adjust dose. Moderate Theoretical

Lopinavir → see HIV-protease inhibitors

Loprazolam → see benzodiazepines

Loratadine → see antihistamines, non-sedating

Lorazepam → see benzodiazepines

Lorlatinib

- **Lorlatinib** is predicted to decrease the exposure to **aliskiren**. Moderate Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **lorlatinib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **lorlatinib**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. Severe Study
- **Lorlatinib** decreases the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Study
- **Lorlatinib** moderately decreases the exposure to benzodiazepines **(midazolam)**. Avoid. Moderate Study
- **Lorlatinib** is predicted to decrease the exposure to **ciclosporin**. Avoid. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. Severe Study
- **Lorlatinib** is predicted to decrease the exposure to **colchicine**. Moderate Study

- **Lorlatinib** is predicted to decrease the exposure to **combined hormonal contraceptives**. Avoid. Moderate Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **coumarins**. Moderate Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **digoxin**. Moderate Study
- **Lorlatinib** is predicted to decrease the exposure to **ergotamine**. Avoid. Moderate Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **everolimus**. Avoid. Moderate Study
- **Lorlatinib** is predicted to decrease the exposure to factor XA inhibitors **(edoxaban, rivaroxaban)**. Moderate Study
- **Grapefruit** juice is predicted to increase the concentration of **lorlatinib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. Severe Study
- **Idelalisib** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. Severe Study
- **Lorlatinib** is predicted to decrease the exposure to **loperamide**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. Severe Study
- **Mitotane** is predicted to decrease the exposure to **lorlatinib**. Avoid. Severe Study
- **Lorlatinib** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Avoid. Moderate Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **pimozide**. Avoid. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **lorlatinib**. Avoid. Severe Study
- **Lorlatinib** is predicted to decrease the exposure to **sirolimus**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **lorlatinib**. Avoid. Severe Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. Moderate Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **talazoparib**. Moderate Study
- **Lorlatinib** is predicted to decrease the exposure to taxanes **(paclitaxel)**. Moderate Study
- **Lorlatinib** is predicted to decrease the exposure to thrombin inhibitors **(dabigatran)**. Moderate Study
- **Lorlatinib** is predicted to decrease the exposure to **topotecan**. Moderate Study

Lormetazepam → see benzodiazepines

Losartan → see angiotensin-II receptor antagonists

Low molecular-weight heparins → see **TABLE 16** p. 1494 (increased serum potassium), **TABLE 3** p. 1490 (anticoagulant effects)

bemiparin · dalteparin · enoxaparin · tinzaparin

- **Andexanet alfa** is predicted to affect the anticoagulant effect of **low molecular-weight heparins**. Avoid. Severe Theoretical
- **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. Severe Theoretical

Loxapine → see **TABLE 8** p. 1491 (hypotension), **TABLE 11** p. 1492 (CNS depressant effects), **TABLE 10** p. 1492 (antimuscarinics)

- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **loxapine**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492 → Also see **TABLE 10** p. 1492
- **Combined hormonal contraceptives** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- **Loxapine** is predicted to decrease the effects of **dopamine receptor agonists**. Moderate Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 10** p. 1492
- **Loxapine** is predicted to decrease the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- **Osilodrostat** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- **Rucaparib** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- **Vemurafenib** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical

Lumacaftor

- **Lumacaftor** is predicted to decrease the exposure to antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to antifungals, azoles **(itraconazole, ketoconazole, posaconazole, voriconazole)**. Avoid or monitor efficacy. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to benzodiazepines **(midazolam)**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **bupropion**. Adjust dose. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **ciclosporin**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **combined hormonal contraceptives**. Use additional contraceptive precautions. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to corticosteroids **(methylprednisolone)**. Adjust dose. Severe Theoretical
- **Lumacaftor** might decrease the efficacy of subdermal **etonogestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **everolimus**. Avoid. Severe Theoretical
- **Lumacaftor** potentially decreases the exposure to **glecaprevir**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **levonorgestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to macrolides **(clarithromycin, erythromycin)**. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to NNRTIs **(doravirine)**. Avoid. Severe Theoretical
- **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. Severe Theoretical
- **Lumacaftor** might decrease the efficacy of oral **progestogen-only contraceptives**. Use additional contraceptive precautions. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to rifamycins **(rifabutin)**. Adjust dose. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. Severe Theoretical

Lumefantrine → see antimalarials

Lurasidone → see antipsychotics, second generation

Lymecycline → see tetracyclines

Macitentan → see endothelin receptor antagonists

Macrolides → see **TABLE 9** p. 1492 (QT-interval prolongation)

azithromycin · clarithromycin · erythromycin

- Interactions do not generally apply to topical use of **azithromycin** unless specified.
- Since systemic absorption can follow topical application of **erythromycin**, the possibility of interactions should be borne in mind.

- **Clarithromycin** is predicted to increase the exposure to **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. Severe Study
- **Erythromycin** is predicted to increase the exposure to **abemaciclib**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **acalabrutinib**. Avoid. Severe Study

Macrolides (continued)

- **Erythromycin** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. Severe Study
- **Macrolides** are predicted to increase the exposure to **afatinib**. Moderate Study
- **Clarithromycin** is predicted to markedly increase the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 210. Severe Study
- **Azithromycin** is predicted to increase the exposure to **aliskiren**. Moderate Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **aliskiren**. Moderate Study
- **Clarithromycin** is predicted to moderately increase the exposure to alpha blockers **(alfuzosin, tamsulosin)**. Use with caution or avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to alpha blockers **(doxazosin)**. Moderate Study
- **Erythromycin** is predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- **Azithromycin** is predicted to increase the exposure to **aminophylline**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **aminophylline**. Adjust dose. Moderate Theoretical
- **Aminophylline** is predicted to decrease the exposure to **erythromycin**. Adjust dose. Severe Study
- **Clarithromycin** is predicted to increase the exposure to antiandrogens **(apalutamide)**. Mild Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to antiandrogens **(darolutamide)**. Monitor and adjust dose. Moderate Theoretical
- **Clarithromycin** very markedly increases the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to moderately increase the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to antiarrhythmics **(lidocaine)**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Severe Study
- **Erythromycin** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** slightly increases the concentration of antiepileptics **(carbamazepine)**. Monitor concentration and adjust dose. Severe Study
- **Erythromycin** markedly increases the concentration of antiepileptics **(carbamazepine)**. Monitor concentration and adjust dose. Severe Study
- **Clarithromycin** is predicted to very slightly increase the exposure to antiepileptics **(perampanel)**. Mild Study
- **Clarithromycin** is predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Avoid or monitor adverse effects. Severe Study
- **Erythromycin** is predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Macrolides** might increase the risk of serious cardiovascular adverse effects when given with antimalarials **(chloroquine)**. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Clarithromycin** is predicted to slightly increase the exposure to antipsychotics, second generation **(aripiprazole)**. Adjust **aripiprazole** dose, p. 427. Moderate Study
- **Clarithromycin** is predicted to moderately increase the exposure to antipsychotics, second generation **(cariprazine)**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to antipsychotics, second generation **(cariprazine)**. Avoid. Severe Study
- **Erythromycin** potentially increases the risk of toxicity when given with antipsychotics, second generation **(clozapine)**. Severe Anecdotal
- **Erythromycin** is predicted to increase the exposure to antipsychotics, second generation **(lurasidone)**. Adjust **lurasidone** dose. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to antipsychotics, second generation **(lurasidone, quetiapine)**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to antipsychotics, second generation **(quetiapine)**. Avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to antipsychotics, second generation **(risperidone)**. Adjust dose. Moderate Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **avapritinib**. Avoid. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose, p. 1045. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **axitinib**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see **TABLE 9** p. 1492
- **Clarithromycin** moderately increases the exposure to benzodiazepines **(alprazolam)**. Avoid. Moderate Study
- **Erythromycin** is predicted to increase the exposure to benzodiazepines **(alprazolam)**. Severe Study
- **Clarithromycin** is predicted to markedly to very markedly increase the exposure to benzodiazepines **(midazolam)**. Avoid or adjust dose. Severe Study
- **Erythromycin** is predicted to increase the exposure to benzodiazepines **(midazolam)**. Monitor adverse effects and adjust dose. Severe Study
- **Macrolides** are predicted to increase the exposure to **berotralstat**. Severe Study
- **Macrolides** are predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to beta$_2$ agonists **(salmeterol)**. Avoid. Severe Study
- **Macrolides** are predicted to increase the exposure to **bictegravir**. Use with caution or avoid. Moderate Theoretical
- **Clarithromycin** slightly increases the exposure to **bortezomib**. Moderate Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **brigatinib**. Avoid or adjust **brigatinib** dose, p. 1048. Severe Study
- **Erythromycin** is predicted to increase the exposure to **brigatinib**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **buspirone**. Adjust **buspirone** dose, p. 373. Severe Study
- **Erythromycin** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study

- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Erythromycin** is predicted to increase the exposure to calcium channel blockers **(diltiazem)**. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **Clarithromycin** is predicted to markedly increase the exposure to calcium channel blockers **(lercanidipine)**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to calcium channel blockers **(verapamil)**. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **cannabidiol**. Avoid or adjust dose. Mild Study
- **Clarithromycin** is predicted to increase the exposure to **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. Severe Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **ceritinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** increases the concentration of **ciclosporin**. Severe Study
- **Erythromycin** greatly increases the exposure to **ciclosporin**. Avoid or monitor. Severe Study
- **Clarithromycin** is predicted to moderately increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. Moderate Study
- **Erythromycin** slightly increases the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. Moderate Study
- **Clarithromycin** is predicted to moderately increase the exposure to **cinacalcet**. Adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the concentration of **erythromycin**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **cobimetinib**. Avoid or monitor for toxicity. Severe Study
- **Erythromycin** is predicted to increase the exposure to **cobimetinib**. Severe Study
- **Azithromycin** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to **colchicine**. Avoid potent CYP3A4 inhibitors or adjust **colchicine** dose, p. 1212. Severe Study
- **Erythromycin** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. Severe Study
- **Clarithromycin** is predicted to increase the exposure to corticosteroids **(beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects. Severe Study
- **Erythromycin** is predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- Macrolides **(clarithromycin, erythromycin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Anecdotal
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **crizotinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **dabrafenib**. Use with caution or avoid. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **dabrafenib**. Moderate Study
- **Clarithromycin** is predicted to markedly to very markedly increase the exposure to **darifenacin**. Avoid. Severe Study
- **Erythromycin** slightly increases the exposure to **darifenacin**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **dasatinib**. Avoid or adjust dose—consult product literature. Severe Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** very slightly increases the exposure to **delamanid**. Severe Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to moderately increase the exposure to **dienogest**. Moderate Study
- **Erythromycin** is predicted to slightly increase the exposure to **dienogest**. Moderate Study
- **Macrolides** increase the concentration of **digoxin**. Severe Anecdotal
- **Clarithromycin** is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors **(saxagliptin)**. Moderate Study
- **Erythromycin** is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors **(saxagliptin)**. Mild Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **domperidone**. Avoid. Severe Study
- **Clarithromycin** increases the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Study
- **Erythromycin** is predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Avoid. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **dronabinol**. Adjust dose. Mild Study
- **Clarithromycin** is predicted to increase the exposure to **drospirenone**. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **dutasteride**. Monitor adverse effects and adjust dose. Moderate Theoretical
- **Erythromycin** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Clarithromycin** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with potent CYP3A4 inhibitors. Severe Study
- **Erythromycin** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **encorafenib**. Avoid or monitor. Severe Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to moderately increase the exposure to **encorafenib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to endothelin receptor antagonists **(bosentan)**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to endothelin receptor antagonists **(macitentan)**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **entrectinib**. Avoid potent CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. Severe Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Avoid. Severe Theoretical
- **Erythromycin** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Clarithromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Avoid. Severe Theoretical
- **Erythromycin** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Azithromycin** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical

Macrolides (continued)

- **Clarithromycin** is predicted to increase the exposure to **erlotinib**. Use with caution and adjust dose. Severe Study
- **Erythromycin** is predicted to increase the exposure to **erlotinib**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **esketamine**. Adjust dose. Moderate Study
- **Clarithromycin** is predicted to increase the concentration of subdermal **etonogestrel**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **everolimus**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Clarithromycin** slightly increases the exposure to factor XA inhibitors **(apixaban)**. Moderate Study
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to factor XA inhibitors **(apixaban)**. Moderate Theoretical
- **Erythromycin** slightly increases the exposure to factor XA inhibitors **(edoxaban)**. Adjust **edoxaban** dose, p. 138. Severe Study
- Macrolides **(azithromycin, clarithromycin)** are predicted to increase the exposure to factor XA inhibitors **(edoxaban)**. Severe Theoretical
- **Erythromycin** slightly increases the exposure to factor XA inhibitors **(rivaroxaban)**. Mild Study
- **Clarithromycin** is predicted to increase the exposure to **fedratinib**. Adjust **fedratinib** dose, but avoid depending on other drugs taken—consult product literature, p. 1060. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** is predicted to moderately increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with potent CYP3A4 inhibitors; avoid in hepatic and renal impairment, p. 840. Severe Study
- **Erythromycin** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. Mild Study
- **Macrolides** are predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **fostamatinib**. Monitor adverse effects and adjust dose. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **gefitinib**. Severe Study
- **Erythromycin** is predicted to increase the exposure to **gefitinib**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **gilteritinib**. Moderate Study
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **gilteritinib**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **glasdegib**. Use with caution or avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to moderately to markedly increase the exposure to **grazoprevir**. Avoid. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **guanfacine**. Adjust **guanfacine** dose, p. 384. Moderate Study
- **Erythromycin** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **erythromycin**. Moderate Study
- HIV-protease inhibitors **(atazanavir)** are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. Severe Study
- HIV-protease inhibitors **(darunavir, fosamprenavir, lopinavir)** boosted with ritonavir are predicted to increase the exposure to **clarithromycin**. Adjust dose in renal impairment. Severe Study
- HIV-protease inhibitors **(ritonavir)** increase the exposure to **clarithromycin**. Adjust dose in renal impairment. Severe Study
- HIV-protease inhibitors **(tipranavir)** boosted with ritonavir increase the exposure to **clarithromycin** and **clarithromycin** increases the exposure to HIV-protease inhibitors **(tipranavir)** boosted with ritonavir. Monitor; adjust dose in renal impairment. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **erythromycin**. Severe Theoretical
- **Macrolides** might increase the risk of serious cardiovascular adverse effects when given with **hydroxychloroquine**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **ibrutinib**. Avoid potent CYP3A4 inhibitors or adjust **ibrutinib** dose, p. 1062. Severe Study
- **Erythromycin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **imatinib**. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the risk of toxicity when given with **irinotecan**. Avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **ivabradine**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to **ivabradine**. Avoid. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to **ivacaftor**. Adjust dose with potent CYP3A4 inhibitors, see ivacaftor p. 317, lumacaftor with ivacaftor p. 318, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Erythromycin** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to moderately increase the exposure to **larotrectinib**. Avoid or adjust **larotrectinib** dose, p. 1065. Moderate Study
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **larotrectinib**. Mild Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the concentration of **letermovir**. Moderate Study
- **Clarithromycin** increases the exposure to **linezolid**. Moderate Anecdotal
- **Azithromycin** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Clarithromycin** is predicted to markedly increase the exposure to **lomitapide**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **lorlatinib**. Avoid or adjust **lorlatinib** dose, p. 1067. Severe Study
- **Lumacaftor** is predicted to decrease the exposure to macrolides **(clarithromycin, erythromycin)**. Moderate Theoretical
- **Clarithromycin** is predicted to markedly increase the exposure to **maraviroc**. Adjust dose. Severe Study
- **Clarithromycin** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to meglitinides **(repaglinide)**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Erythromycin** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **mifepristone**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **modafinil**. Mild Theoretical

- **Clarithromycin** increases the risk of neutropenia when given with monoclonal antibodies **(brentuximab vedotin)**. Monitor and adjust dose. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to monoclonal antibodies **(polatuzumab vedotin)**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to monoclonal antibodies **(trastuzumab emtansine)**. Avoid. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. Moderate Study
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **naldemedine**. Moderate Study
- **Clarithromycin** is predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. Severe Study
- **Erythromycin** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- **Clarithromycin** is predicted to markedly increase the exposure to neurokinin-1 receptor antagonists **(aprepitant)**. Moderate Study
- **Erythromycin** is predicted to increase the exposure to neurokinin-1 receptor antagonists **(aprepitant)**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to neurokinin-1 receptor antagonists **(fosaprepitant)**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to neurokinin-1 receptor antagonists **(netupitant)**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **nilotinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Macrolides** are predicted to increase the exposure to **nintedanib**. Moderate Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **erythromycin**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** decrease the exposure to **clarithromycin**. Moderate Study → Also see **TABLE 9** p. 1492
- NNRTIs **(etravirine)** decrease the exposure to **clarithromycin** and **clarithromycin** slightly increases the exposure to NNRTIs **(etravirine)**. Severe Study
- **Erythromycin** is predicted to increase the exposure to NNRTIs **(nevirapine)**. Moderate Theoretical
- **Clarithromycin** decreases the absorption of NRTIs **(zidovudine)**. Separate administration by at least 2 hours. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Severe Study
- **Erythromycin** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** is predicted to increase the concentration of opioids **(methadone)**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to opioids **(methadone)**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **osilodrostat**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **oxybutynin**. Mild Study
- **Clarithromycin** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. Moderate Study → Also see **TABLE 9** p. 1492
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. Moderate Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **pazopanib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. Severe Study
- **Erythromycin** is predicted to increase the exposure to **pemigatinib**. Severe Study
- **Erythromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. Severe Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Use with caution or avoid. Severe Study
- **Erythromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- **Erythromycin** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Macrolides** are predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **pimozide**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **ponatinib**. Moderate Study
- **Clarithromycin** is predicted to moderately increase the exposure to **praziquantel**. Mild Study
- **Clarithromycin** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **ranolazine**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **Erythromycin** is predicted to increase the exposure to **regorafenib**. Moderate Study
- **Macrolides** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study

Macrolides (continued)

- **Clarithromycin** is predicted to increase the exposure to retinoids **(alitretinoin)**. Adjust **alitretinoin** dose, p. 1356. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. Moderate Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1492
- Rifamycins **(rifabutin)** have been reported to cause neutropenia when given with **azithromycin**. Severe Study
- Rifamycins **(rifabutin)** decrease the concentration of **clarithromycin** and **clarithromycin** increases the concentration of rifamycins **(rifabutin)**. Monitor and adjust dose. Severe Study
- Rifamycins **(rifampicin)** greatly decrease the concentration of **clarithromycin**. Severe Study
- **Erythromycin** is predicted to increase the concentration of rifamycins **(rifabutin)** and rifamycins **(rifabutin)** are predicted to decrease the concentration of **erythromycin**. Monitor and adjust dose. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. Moderate Study
- **Erythromycin** slightly increases the exposure to **ruxolitinib**. Mild Study
- **Clarithromycin** is predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. Moderate Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **selpercatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Theoretical
- **Erythromycin** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study
- **Clarithromycin** is predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Erythromycin** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to SNRIs **(venlafaxine)**. Moderate Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. Severe Study
- **Clarithromycin** is predicted to moderately increase the exposure to SSRIs **(dapoxetine)**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. Severe Study
- **Erythromycin** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to statins **(atorvastatin)**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- **Erythromycin** slightly increases the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Severe Study
- **Clarithromycin** moderately increases the exposure to statins **(pravastatin)**. Severe Study
- **Erythromycin** slightly increases the exposure to statins **(pravastatin)**. Severe Study
- **Clarithromycin** is predicted to increase the exposure to statins **(simvastatin)**. Avoid. Severe Study
- **Erythromycin** markedly increases the exposure to statins **(simvastatin)**. Avoid. Severe Study
- **Clarithromycin** is predicted to slightly increase the exposure to **sulfonylureas**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study → Also see **TABLE 9** p. 1492
- **Erythromycin** is predicted to increase the exposure to **sunitinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Erythromycin** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Clarithromycin** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Avoid or monitor—consult product literature. Severe Study
- **Erythromycin** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical
- **Clarithromycin** is predicted to increase the exposure to taxanes **(docetaxel)**. Avoid or adjust dose. Severe Study
- **Erythromycin** is predicted to increase the exposure to taxanes **(docetaxel)**. Severe Study
- **Azithromycin** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)** (oral). Unknown Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to taxanes **(paclitaxel)**. Moderate Anecdotal
- **Clarithromycin** is predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Erythromycin** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical
- **Clarithromycin** might increase the exposure to **tepotinib**. Avoid. Severe Theoretical
- **Clarithromycin** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Erythromycin** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Erythromycin** decreases the clearance of **theophylline** and **theophylline** potentially decreases the clearance of **erythromycin**. Adjust dose. Severe Study
- Macrolides **(azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. Moderate Anecdotal
- **Clarithromycin** increases the exposure to thrombin inhibitors **(dabigatran)**. Moderate Study
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Severe Theoretical
- **Azithromycin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Clarithromycin** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Macrolides** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Clarithromycin** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Erythromycin** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **tolterodine**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. Severe Study
- **Erythromycin** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- **Macrolides** are predicted to increase the exposure to **topotecan**. Severe Study
- **Clarithromycin** is predicted to increase the exposure to **toremifene**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- **Macrolides** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Clarithromycin** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study

- **Erythromycin** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Clarithromycin** increases the exposure to triptans **(almotriptan)**. Mild Study
- **Clarithromycin** is predicted to markedly increase the exposure to triptans **(eletriptan)**. Avoid. Severe Study
- **Erythromycin** moderately increases the exposure to triptans **(eletriptan)**. Avoid. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- **Erythromycin** moderately increases the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. Severe Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1492
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Azithromycin** might increase the exposure to **vinca alkaloids**. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Clarithromycin** is predicted to increase the exposure to vitamin D substances **(paricalcitol)**. Moderate Study
- **Clarithromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- **Erythromycin** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Magnesium

SEPARATION OF ADMINISTRATION **Magnesium-containing antacids** should preferably not be taken at the same time as other drugs since they might impair absorption. **Magnesium-containing antacids** might damage enteric coatings designed to prevent dissolution in the stomach.

- Oral **magnesium** trisilicate decreases the absorption of oral antimalarials **(chloroquine)**. Separate administration by at least 4 hours. Moderate Study
- Oral **magnesium** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. Severe Theoretical
- Oral **magnesium** decreases the absorption of oral bisphosphonates **(alendronate)**. **Alendronate** should be taken at least 30 minutes before magnesium. Moderate Study
- Oral **magnesium** decreases the absorption of oral bisphosphonates **(clodronate)**. Avoid magnesium for 2 hours before or 1 hour after **clodronate**. Moderate Study
- Oral **magnesium** is predicted to decrease the absorption of oral bisphosphonates **(ibandronate)**. Avoid for at least 6 hours before or 1 hour after **ibandronate**. Moderate Theoretical
- Oral **magnesium** decreases the absorption of oral bisphosphonates **(risedronate)**. Separate administration by at least 2 hours. Moderate Study
- Intravenous **magnesium** potentially increases the risk of hypotension when given with calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine, verapamil)** in pregnant women. Severe Anecdotal
- Oral **magnesium** trisilicate is predicted to decrease the absorption of oral **hydroxychloroquine**. Moderate Theoretical
- Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Study
- Oral **magnesium** trisilicate decreases the absorption of oral **nitrofurantoin**. Moderate Study
- **Magnesium** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after magnesium. Moderate Theoretical
- Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. Moderate Study

MAO-B inhibitors

→ see **TABLE 6** p. 1491 (bradycardia), **TABLE 8** p. 1491 (hypotension), **TABLE 13** p. 1493 (serotonin syndrome)

rasagiline · safinamide · selegiline

FOOD AND LIFESTYLE Hypertension is predicted to occur when high-dose **selegiline** is taken with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- MAO-B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **amfetamines**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Safinamide** is predicted to increase the risk of severe hypertension when given with **amfetamines**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Axitinib** is predicted to increase the exposure to **rasagiline**. Moderate Theoretical
- MAO-B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of severe hypertension when given with **beta$_2$ agonists**. Avoid. Severe Theoretical
- **Safinamide** is predicted to increase the risk of severe hypertension when given with **beta$_2$ agonists**. Severe Theoretical
- **Bupropion** is predicted to increase the risk of severe hypertension when given with **MAO-B inhibitors**. Avoid. Moderate Theoretical
- **Combined hormonal contraceptives** slightly increases the exposure to **rasagiline**. Moderate Study
- **Combined hormonal contraceptives** increase the exposure to **selegiline**. Avoid. Severe Study
- **Givosiran** is predicted to increase the exposure to **rasagiline**. Use with caution and adjust dose. Moderate Study
- **Hormone replacement therapy** is predicted to increase the exposure to **selegiline**. Avoid. Moderate Study
- **MAO-B inhibitors** are predicted to increase the effects of **levodopa**. Adjust dose. Mild Study → Also see **TABLE 8** p. 1491
- MAO-B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Safinamide** is predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1493
- MAO-B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 13** p. 1493
- **Safinamide** is predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Rasagiline** is predicted to increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. Severe Theoretical
- **Selegiline** might increase the risk of a hypertensive crisis when given with **methylphenidate**. Avoid. Severe Theoretical
- **Mexiletine** slightly increases the exposure to **rasagiline**. Moderate Study
- **Moclobemide** is predicted to increase the effects of MAO-B inhibitors **(rasagiline, selegiline)**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Moclobemide** is predicted to increase the risk of adverse effects when given with **safinamide**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Rasagiline** is predicted to increase the risk of adverse effects when given with opioids **(pethidine)**. Avoid and for 14 days after stopping **rasagiline**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Safinamide** is predicted to increase the risk of adverse effects when given with opioids **(pethidine)**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Selegiline** increases the risk of adverse effects when given with opioids **(pethidine)**. Avoid. Severe Anecdotal → Also see **TABLE 13** p. 1493
- **Osilodrostat** slightly increases the exposure to **rasagiline**. Moderate Study

MAO-B inhibitors (continued)

- **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAO-B inhibitors** and **MAO-B inhibitors** might decrease the exposure to the active metabolites of **ozanimod**. Avoid. Severe Theoretical → Also see **TABLE 6** p. 1491
- Quinolones **(ciprofloxacin)** slightly increase the exposure to **rasagiline**. Moderate Study
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors **(rasagiline, selegiline)**. Avoid. Severe Theoretical
- **Rucaparib** slightly increases the exposure to **rasagiline**. Moderate Study
- **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid and for 14 days after stopping **MAO-B inhibitors**. Severe Theoretical
- **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. Severe Anecdotal
- **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. Severe Anecdotal
- **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. Severe Theoretical
- **Vemurafenib** slightly increases the exposure to **rasagiline**. Moderate Study

MAOIs, irreversible → see **TABLE 8** p. 1491 (hypotension), **TABLE 13** p. 1493 (serotonin syndrome)

isocarboxazid • phenelzine • tranylcypromine

FOOD AND LIFESTYLE Potentially life-threatening hypertensive crisis can develop in those taking MAOIs who eat tyramine-rich food (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines) or foods containing dopa (such as broad bean pods). Avoid tyramine-rich or dopa-rich food or drinks with, or for 2 to 3 weeks after stopping, the MAOI.

- **MAOIs, irreversible** are predicted to increase the effects of alpha blockers **(indoramin)**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Amfetamines** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Anecdotal → Also see **TABLE 13** p. 1493
- Antiepileptics **(carbamazepine)** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- Antiepileptics **(phenobarbital, primidone)** are predicted to increase the effects of **MAOIs, irreversible**. Severe Theoretical
- **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic adverse effects when given with **antihistamines, non-sedating**. Avoid. Severe Theoretical
- **MAOIs, irreversible** are predicted to increase the risk of antimuscarinic adverse effects when given with **antihistamines, sedating**. Avoid. Severe Theoretical
- **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with **atomoxetine**. Avoid and for 2 weeks after stopping the MAOI. Severe Theoretical
- **MAOIs, irreversible** are predicted to increase the risk of cardiovascular adverse effects when given with **beta$_2$ agonists**. Moderate Anecdotal
- **Bupropion** is predicted to increase the risk of severe hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Buspirone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. Severe Anecdotal
- **MAOIs, irreversible** are predicted to increase the effects of **doxapram**. Moderate Theoretical
- **Entacapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. Severe Theoretical
- **Levodopa** increases the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Study → Also see **TABLE 8** p. 1491
- **MAOIs, irreversible** are predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1493
- MAO-B inhibitors **(rasagiline, selegiline)** are predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 13** p. 1493
- MAO-B inhibitors **(safinamide)** are predicted to increase the risk of adverse effects when given with **MAOIs, irreversible**. Avoid and for 1 week after stopping **safinamide**, p. 459. Severe Theoretical → Also see **TABLE 13** p. 1493
- **MAOIs, irreversible** are predicted to alter the antihypertensive effects of **methyldopa**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Methylphenidate** causes a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Mianserin** is predicted to increase the risk of toxicity when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **MAOIs, irreversible**. Avoid. Severe Theoretical
- **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. Severe Theoretical
- **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid. Severe Study → Also see **TABLE 13** p. 1493
- **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. Severe Theoretical
- **MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. Severe Theoretical
- **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Study
- **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Tolcapone** is predicted to increase the effects of **MAOIs, irreversible**. Avoid. Severe Theoretical
- **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 13** p. 1493
- **MAOIs, irreversible** are predicted to increase the exposure to triptans **(rizatriptan, sumatriptan)**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1493
- **MAOIs, irreversible** are predicted to increase the exposure to triptans **(zolmitriptan)**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Tryptophan** increases the risk of adverse effects when given with **MAOIs, irreversible**. Severe Anecdotal → Also see **TABLE 13** p. 1493

Maraviroc

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. Severe Study
- **Cenobamate** is predicted to decrease the exposure to **maraviroc**. Adjust dose. Moderate Theoretical
- **Cobicistat** markedly increases the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **maraviroc**. Avoid. Moderate Theoretical
- HIV-protease inhibitors **(atazanavir)** moderately to markedly increase the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- HIV-protease inhibitors **(darunavir)** boosted with ritonavir markedly increase the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- HIV-protease inhibitors **(lopinavir)** boosted with ritonavir moderately increase the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- HIV-protease inhibitors **(ritonavir)** markedly increase the exposure to **maraviroc**. Refer to specialist literature. Severe Study
- **Maraviroc** potentially decreases the exposure to HIV-protease inhibitors **(fosamprenavir)** and HIV-protease inhibitors **(fosamprenavir)** potentially decrease the exposure to **maraviroc**. Avoid. Severe Study
- **Idelalisib** markedly increases the exposure to **maraviroc**. Adjust dose. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **maraviroc**. Adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **maraviroc**. Moderate Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **maraviroc**. Refer to specialist literature. Severe Theoretical
- NNRTIs **(efavirenz)** decrease the exposure to **maraviroc**. Refer to specialist literature. Severe Theoretical
- NNRTIs **(etravirine)** slightly decrease the exposure to **maraviroc**. Refer to specialist literature. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- **St John's wort** is predicted to decrease the exposure to **maraviroc**. Avoid. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **maraviroc**. Use with caution or avoid. Moderate Theoretical

Measles, mumps and rubella vaccine, live → see live vaccines

Mebendazole

- H_2 receptor antagonists **(cimetidine)** increase the concentration of **mebendazole**. Moderate Study

Medroxyprogesterone

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. Moderate Theoretical
- **Cobicistat** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. Moderate Theoretical
- **Idelalisib** is predicted to increase the concentration of intramuscular **medroxyprogesterone**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the concentration of intramuscular **medroxyprogesterone**. Moderate Theoretical
- **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. Severe Theoretical

Mefenamic acid → see NSAIDs

Mefloquine → see antimalarials

Meglitinides → see TABLE 14 p. 1493 (antidiabetic drugs)

repaglinide

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- Anti-androgens **(darolutamide)** are predicted to increase the concentration of **repaglinide**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **repaglinide**. Moderate Study
- **Ciclosporin** moderately increases the exposure to **repaglinide**. Moderate Study
- **Clopidogrel** increases the exposure to **repaglinide**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **repaglinide**. Moderate Study
- **Elexacaftor** is predicted to increase the exposure to **repaglinide**. Moderate Theoretical
- **Fenfluramine** might decrease blood glucose concentrations when given with **meglitinides**. Moderate Theoretical
- Fibrates **(gemfibrozil)** increase the exposure to **repaglinide**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **repaglinide**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **repaglinide**. Moderate Study
- Iron chelators **(deferasirox)** moderately increase the exposure to **repaglinide**. Avoid. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **repaglinide**. Moderate Study
- **Letermovir** is predicted to increase the concentration of **repaglinide**. Avoid. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **repaglinide**. Moderate Study
- **Mifepristone** is predicted to increase the exposure to **repaglinide**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- **Opicapone** is predicted to increase the exposure to **repaglinide**. Avoid. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **repaglinide**. Mild Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **repaglinide**. Monitor blood glucose and adjust dose. Moderate Study
- **Roxadustat** is predicted to increase the exposure to **repaglinide**. Monitor adverse effects and adjust dose. Moderate Study
- **Selpercatinib** increases the exposure to **repaglinide**. Avoid. Moderate Study
- Taxanes **(cabazitaxel)** are predicted to affect the exposure to **repaglinide**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **repaglinide**. Moderate Study
- **Trimethoprim** slightly increases the exposure to **repaglinide**. Avoid or monitor blood glucose. Moderate Study
- **Venetoclax** is predicted to increase the exposure to **repaglinide**. Moderate Theoretical

Melatonin → see TABLE 11 p. 1492 (CNS depressant effects)

- Antiepileptics **(phenytoin)** are predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Axitinib** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- **Combined hormonal contraceptives** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- **Givosiran** is predicted to increase the exposure to **melatonin**. Use with caution and adjust dose. Moderate Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Leflunomide** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical

Melatonin (continued)
- **Mexiletine** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **melatonin**. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- SSRIs **(fluvoxamine)** very markedly increase the exposure to **melatonin**. Avoid. Severe Study
- **Teriflunomide** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **melatonin**. Moderate Theoretical

Meloxicam → see NSAIDs

Melphalan → see alkylating agents

Memantine
- Dopamine receptor agonists **(amantadine)** increase the risk of CNS toxicity when given with **memantine**. Use with caution or avoid. Severe Theoretical
- **Memantine** is predicted to increase the effects of dopamine receptor agonists **(apomorphine, bromocriptine, cabergoline, pramipexole, quinagolide, ropinirole, rotigotine)**. Moderate Theoretical
- **Memantine** is predicted to increase the risk of CNS adverse effects when given with **ketamine**. Avoid. Severe Theoretical
- **Memantine** is predicted to increase the effects of **levodopa**. Moderate Theoretical

Mepacrine
- **Mepacrine** is predicted to increase the concentration of antimalarials **(primaquine)**. Avoid. Moderate Theoretical

Mepivacaine → see anaesthetics, local

Meptazinol → see opioids

Mercaptopurine → see **TABLE 1** p. 1490 (hepatotoxicity), **TABLE 15** p. 1493 (myelosuppression)
- **Allopurinol** potentially increases the risk of haematological toxicity when given with **mercaptopurine**. Adjust **mercaptopurine** dose, p. 986. Severe Study
- **Mercaptopurine** decreases the anticoagulant effect of **coumarins**. Moderate Anecdotal
- **Febuxostat** is predicted to increase the exposure to **mercaptopurine**. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mercaptopurine** (high-dose). UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Trimethoprim** might increase the risk of haematological toxicity when given with **mercaptopurine** in renal transplant patients. Severe Theoretical

Meropenem → see carbapenems

Mesalazine

ROUTE-SPECIFIC INFORMATION The manufacturers of some mesalazine gastro-resistant and modified-release medicines (*Asacol MR* tablets, *Ipocol*, *Salofalk* granules) suggest that preparations that lower stool pH (e.g. lactulose) might prevent the release of mesalazine.

Metaraminol → see sympathomimetics, vasoconstrictor

Metformin → see **TABLE 14** p. 1493 (antidiabetic drugs)
- **Alcohol** (excessive consumption) potentially increases the risk of lactic acidosis when given with **metformin**. Avoid excessive alcohol consumption. Moderate Theoretical
- **Bictegravir** slightly increases the exposure to **metformin**. Moderate Study
- **Dolutegravir** increases the exposure to **metformin**. Adjust dose. Moderate Study
- **Fenfluramine** might decrease blood glucose concentrations when given with **metformin**. Moderate Theoretical
- **Guanfacine** is predicted to increase the concentration of **metformin**. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **metformin**. Monitor and adjust dose. Moderate Study
- **Mexiletine** is predicted to affect the exposure to **metformin**. Unknown Theoretical
- **Pitolisant** is predicted to increase the exposure to **metformin**. Mild Theoretical
- **Ribociclib** is predicted to increase the exposure to **metformin**. Moderate Theoretical
- **Risdiplam** is predicted to increase the concentration of **metformin**. Monitor and adjust dose. Moderate Theoretical
- **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. Moderate Study

Methadone → see opioids

Methenamine
- **Acetazolamide** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical
- **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical
- **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical
- **Sodium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical
- Thiazide diuretics **(metolazone)** are predicted to decrease the efficacy of **methenamine**. Moderate Theoretical

Methocarbamol → see **TABLE 11** p. 1492 (CNS depressant effects)

Methotrexate → see **TABLE 1** p. 1490 (hepatotoxicity), **TABLE 15** p. 1493 (myelosuppression), **TABLE 2** p. 1490 (nephrotoxicity), **TABLE 5** p. 1491 (thromboembolism)
- **Acetazolamide** increases the urinary excretion of **methotrexate**. Moderate Study
- **Methotrexate** is predicted to decrease the clearance of **aminophylline**. Moderate Theoretical
- Anti-androgens **(apalutamide)** are predicted to decrease the exposure to **methotrexate**. Mild Study
- Anti-androgens **(darolutamide)** are predicted to increase the concentration of **methotrexate**. Moderate Theoretical
- Antiepileptics **(levetiracetam)** decrease the clearance of **methotrexate**. Severe Anecdotal
- Antimalarials **(pyrimethamine)** are predicted to increase the risk of adverse effects when given with **methotrexate**. Severe Theoretical
- **Asparaginase** affects the efficacy of **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- **Aspirin** (high-dose) is predicted to increase the risk of toxicity when given with **methotrexate**. Severe Study
- **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **methotrexate**. Severe Study
- **Crisantaspase** affects the efficacy of **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- **Eltrombopag** is predicted to increase the concentration of **methotrexate**. Moderate Theoretical
- **Methotrexate** potentially increases the risk of severe skin reaction when given with topical **fluorouracil**. Severe Anecdotal → Also see **TABLE 15** p. 1493 → Also see **TABLE 5** p. 1491
- **Leflunomide** is predicted to increase the exposure to **methotrexate**. Moderate Theoretical → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **methotrexate** (high-dose). UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Nitisinone** is predicted to increase the exposure to **methotrexate**. Moderate Study
- **Nitrous oxide** potentially increases the risk of methotrexate toxicity when given with **methotrexate**. Avoid. Severe Study
- **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. Severe Study → Also see **TABLE 2** p. 1490
- **Pegaspargase** affects the efficacy of **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1490
- **Potassium aminobenzoate** increases the concentration of **methotrexate**. Moderate Theoretical
- **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. Severe Study

- Quinolones **(ciprofloxacin)** potentially increase the risk of toxicity when given with **methotrexate.** Severe Anecdotal
- **Regorafenib** is predicted to increase the exposure to **methotrexate.** Moderate Theoretical → Also see **TABLE 15** p. 1493
- Retinoids **(acitretin)** are predicted to increase the concentration of **methotrexate.** Avoid. Moderate Anecdotal
- **Methotrexate** is predicted to decrease the efficacy of **sapropterin.** Moderate Theoretical
- **Sulfonamides** are predicted to increase the exposure to **methotrexate.** Use with caution or avoid. Severe Theoretical
- **Tedizolid** is predicted to increase the exposure to **methotrexate.** Avoid. Moderate Theoretical
- **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur.** Severe Theoretical → Also see **TABLE 15** p. 1493
- **Teriflunomide** is predicted to increase the exposure to **methotrexate.** Moderate Study → Also see **TABLE 1** p. 1490
- **Methotrexate** decreases the clearance of **theophylline.** Moderate Study
- **Trimethoprim** increases the risk of adverse effects when given with **methotrexate.** Avoid. Severe Anecdotal → Also see **TABLE 2** p. 1490

Methoxy polyethylene glycol-epoetin beta → see **TABLE 5** p. 1491 (thromboembolism)

Methoxyflurane → see volatile halogenated anaesthetics

Methyldopa → see **TABLE 8** p. 1491 (hypotension)

- **Entacapone** is predicted to increase the exposure to **methyldopa.** Moderate Theoretical
- Oral **iron** decreases the effects of oral **methyldopa.** Moderate Study
- **Methyldopa** increases the risk of neurotoxicity when given with **lithium.** Severe Anecdotal
- **MAOIs, irreversible** are predicted to alter the antihypertensive effects of **methyldopa.** Avoid. Severe Theoretical → Also see **TABLE 8** p. 1491

Methylphenidate

- **Alcohol** might increase the concentration of **methylphenidate.** Avoid. Moderate Study
- Antiepileptics **(carbamazepine)** might decrease the concentration of **methylphenidate.** Moderate Anecdotal
- Antiepileptics **(valproate)** might enhance the effects of **methylphenidate.** Severe Anecdotal
- **Methylphenidate** might increase the risk of dyskinesias when given with antipsychotics, second generation **(paliperidone).** Severe Theoretical
- **Methylphenidate** increases the risk of dyskinesias when given with antipsychotics, second generation **(risperidone).** Severe Anecdotal
- **Methylphenidate** is predicted to decrease the effects of **apraclonidine.** Avoid. Severe Theoretical
- **Methylphenidate** has been reported to cause psychotic symptoms when given with **disulfiram.** Severe Anecdotal
- **Methylphenidate** might increase the risk of elevated blood pressure when given with **linezolid.** Avoid. Severe Theoretical
- MAO-B inhibitors **(rasagiline)** are predicted to increase the risk of a hypertensive crisis when given with **methylphenidate.** Avoid. Severe Theoretical
- MAO-B inhibitors **(selegiline)** might increase the risk of a hypertensive crisis when given with **methylphenidate.** Avoid. Severe Theoretical
- **Methylphenidate** causes a hypertensive crisis when given with **MAOIs, irreversible.** Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Methylphenidate** is predicted to cause a hypertensive crisis when given with **methylthioninium chloride.** Severe Theoretical
- **Methylphenidate** is predicted to cause a hypertensive crisis when given with **moclobemide.** Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **methylphenidate.** Severe Theoretical
- **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **ozanimod.** Severe Theoretical
- **Methylphenidate** might increase the concentration of **tricyclic antidepressants.** Use with caution and adjust dose. Moderate Study
- **Methylphenidate** might increase the risk of hypertension and arrhythmias when given with **volatile halogenated anaesthetics.** Avoid **methylphenidate** on day of surgery, p. 379. Severe Theoretical

Methylprednisolone → see corticosteroids

Methylthioninium chloride → see **TABLE 13** p. 1493 (serotonin syndrome)

- **Methylthioninium chloride** is predicted to increase the risk of severe hypertension when given with **bupropion.** Avoid. Severe Theoretical
- **Methylphenidate** is predicted to cause a hypertensive crisis when given with **methylthioninium chloride.** Severe Theoretical

Metoclopramide

- **Metoclopramide** is predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine).** Avoid. Severe Theoretical
- **Metoclopramide** potentially decreases the absorption of antifungals, azoles **(posaconazole)** oral suspension. Moderate Study
- **Metoclopramide** decreases the concentration of antimalarials **(atovaquone).** Avoid. Moderate Study
- **Metoclopramide** is predicted to decrease the effects of dopamine receptor agonists **(apomorphine, bromocriptine, cabergoline, pramipexole, quinagolide, ropinirole, rotigotine).** Avoid. Moderate Study
- **Metoclopramide** decreases the effects of **levodopa.** Avoid. Moderate Study
- **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising.** Moderate Theoretical
- **Metoclopramide** increases the effects of **suxamethonium.** Moderate Study

Metolazone → see thiazide diuretics

Metoprolol → see beta blockers, selective

Metreleptin

- **Metreleptin** might alter the exposure to **aminophylline.** Severe Theoretical
- **Metreleptin** might alter the exposure to **ciclosporin.** Monitor concentration and adjust dose. Severe Theoretical
- **Metreleptin** might decrease the efficacy of **combined hormonal contraceptives.** Use additional contraceptive precautions. Severe Theoretical
- **Metreleptin** might alter the exposure to coumarins **(warfarin).** Monitor INR and adjust dose. Severe Theoretical
- **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **insulin.** Monitor blood glucose and adjust dose. Severe Theoretical
- **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **sulfonylureas.** Monitor blood glucose and adjust dose. Severe Theoretical
- **Metreleptin** might alter the exposure to **theophylline.** Monitor concentration and adjust dose. Severe Theoretical

Metronidazole → see **TABLE 12** p. 1493 (peripheral neuropathy)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Alcohol** potentially causes a disulfiram-like reaction when given with **metronidazole.** Avoid for at least 48 hours after stopping treatment. Moderate Study
- **Metronidazole** increases the risk of toxicity when given with alkylating agents **(busulfan).** Severe Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **metronidazole.** Moderate Study
- **Metronidazole** is predicted to increase the risk of capecitabine toxicity when given with **capecitabine.** Severe Theoretical
- **Metronidazole** increases the anticoagulant effect of **coumarins.** Monitor INR and adjust dose. Severe Study
- **Disulfiram** increases the risk of acute psychoses when given with **metronidazole.** Severe Study → Also see **TABLE 12** p. 1493
- **Metronidazole** increases the risk of toxicity when given with **fluorouracil.** Severe Study
- **Metronidazole** is predicted to increase the concentration of **lithium.** Avoid or adjust dose. Severe Anecdotal

Metyrapone

- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the effects of **metyrapone**. Avoid. Moderate Study
- Antihistamines, sedating **(cyproheptadine)** decrease the effects of **metyrapone**. Avoid. Moderate Study
- **Carbimazole** decreases the effects of **metyrapone**. Avoid. Moderate Theoretical
- **Combined hormonal contraceptives** decrease the effects of **metyrapone**. Avoid. Moderate Theoretical
- Phenothiazines **(chlorpromazine)** decrease the effects of **metyrapone**. Avoid. Moderate Theoretical
- **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. Moderate Theoretical
- Tricyclic antidepressants **(amitriptyline)** decrease the effects of **metyrapone**. Avoid. Moderate Theoretical

Mexiletine

> **FOOD AND LIFESTYLE** Dose adjustment might be necessary if smoking started or stopped during treatment.

- **Mexiletine** is predicted to increase the exposure to **agomelatine**. Moderate Study
- **Mexiletine** is predicted to increase the exposure to **aminophylline**. Adjust dose. Moderate Theoretical
- **Mexiletine** is predicted to increase the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Mexiletine** is predicted to increase the exposure to **anagrelide**. Moderate Theoretical
- **Mexiletine** is predicted to increase the risk of torsade de pointes when given with **antiarrhythmics**. Avoid. Severe Theoretical
- Antiepileptics **(phenytoin)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. Moderate Study
- **Mexiletine** increases the concentration of antipsychotics, second generation **(clozapine)**. Monitor adverse effects and adjust dose. Severe Study
- **Mexiletine** is predicted to increase the exposure to antipsychotics, second generation **(olanzapine)**. Adjust dose. Moderate Anecdotal
- **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **beta blockers, non-selective**. Avoid or monitor. Severe Theoretical
- **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with **beta blockers, selective**. Avoid or monitor. Severe Theoretical
- **Bupropion** is predicted to increase the exposure to **mexiletine**. Moderate Study
- **Mexiletine** increases the risk of cardiovascular adverse effects when given with calcium channel blockers **(diltiazem)**. Avoid or monitor. Severe Theoretical
- **Mexiletine** potentially increases the risk of cardiovascular adverse effects when given with calcium channel blockers **(verapamil)**. Avoid or monitor. Severe Theoretical
- **Cinacalcet** is predicted to increase the exposure to **mexiletine**. Moderate Study
- **Cobicistat** potentially increases the exposure to **mexiletine**. Severe Theoretical
- **Mexiletine** potentially affects the exposure to coumarins **(warfarin)**. Avoid. Unknown Theoretical
- **Mexiletine** is predicted to increase the exposure to dopamine receptor agonists **(ropinirole)**. Adjust dose. Moderate Study
- **Mexiletine** are predicted to increases the exposure to **erlotinib**. Monitor adverse effects and adjust dose. Moderate Study
- HIV-protease inhibitors **(ritonavir)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. Moderate Study
- **Leflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. Moderate Study
- **Mexiletine** potentially affects the exposure to **lithium**. Avoid. Unknown Theoretical
- **Mexiletine** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- **Mexiletine** slightly increases the exposure to MAO-B inhibitors **(rasagiline)**. Moderate Study
- **Mexiletine** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- **Mexiletine** is predicted to affect the exposure to **metformin**. Unknown Theoretical
- **Opioids** potentially decrease the absorption of oral **mexiletine**. Moderate Study
- **Mexiletine** is predicted to increase the exposure to phenothiazines **(chlorpromazine)**. Moderate Theoretical
- **Mexiletine** is predicted to increase the exposure to phosphodiesterase type-4 inhibitors **(roflumilast)**. Moderate Theoretical
- **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- Rifamycins **(rifampicin)** are predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. Moderate Study
- **Mexiletine** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- **Mexiletine** is predicted to increase the exposure to SNRIs **(duloxetine)**. Moderate Theoretical
- SSRIs **(fluoxetine, fluvoxamine, paroxetine)** are predicted to increase the exposure to **mexiletine**. Moderate Study
- **Terbinafine** is predicted to increase the exposure to **mexiletine**. Moderate Study
- **Teriflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. Moderate Study
- **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Mexiletine** increases the exposure to **tizanidine**. Avoid. Moderate Study
- **Mexiletine** is predicted to increase the exposure to triptans **(zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical

Mianserin → see **TABLE 11** p. 1492 (CNS depressant effects)

- Antiepileptics **(carbamazepine)** markedly decrease the exposure to **mianserin**. Adjust dose. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **mianserin**. Moderate Study → Also see **TABLE 11** p. 1492
- **Mianserin** is predicted to increase the risk of toxicity when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. Severe Theoretical
- **Mianserin** is predicted to decrease the efficacy of **pitolisant**. Moderate Theoretical
- **Mianserin** decreases the effects of sympathomimetics, vasoconstrictor **(ephedrine)**. Severe Anecdotal

Micafungin → see **TABLE 1** p. 1490 (hepatotoxicity)

- **Micafungin** slightly increases the exposure to **amphotericin B**. Avoid or monitor toxicity. Moderate Study

Miconazole → see antifungals, azoles

Midazolam → see benzodiazepines

Midodrine → see sympathomimetics, vasoconstrictor

Midostaurin

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Midostaurin** moderately decreases the exposure to the active metabolite of **bupropion**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Midostaurin** might increase the concentration of **ciclosporin**. Severe Anecdotal

- **Cobicistat** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Crizotinib** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **midostaurin**. Severe Study
- **Elvitegravir** boosted with ritonavir is predicted to increase the exposure to **midostaurin**. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **midostaurin** and **midostaurin** is predicted to increase the exposure to endothelin receptor antagonists **(bosentan)**. Severe Study
- **Grapefruit** juice is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Idelalisib** is predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- **Imatinib** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **midostaurin**. Avoid or monitor for toxicity. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **midostaurin**. Severe Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Theoretical

Mifamurtide → see TABLE 15 p. 1493 (myelosuppression)

- **Ciclosporin** is predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Corticosteroids** are predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **NSAIDs** (high-dose) are predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. Severe Theoretical

Mifepristone

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mifepristone**. Moderate Study
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to **mifepristone**. Moderate Theoretical
- **Mifepristone** is predicted to increase the exposure to **avatrombopag**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **mifepristone**. Moderate Study
- **Mifepristone** is predicted to decrease the efficacy of **corticosteroids**. Use with caution and adjust dose. Moderate Theoretical
- **Mifepristone** is predicted to increase the exposure to coumarins **(warfarin)**. Moderate Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- **Mifepristone** is predicted to increase the exposure to **ergotamine**. Severe Theoretical
- **Mifepristone** is predicted to increase the exposure to **everolimus**. Severe Theoretical
- **Grapefruit** juice is predicted to increase the exposure to **mifepristone**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **mifepristone**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **mifepristone**. Moderate Study
- **Mifepristone** is predicted to increase the exposure to **loperamide**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **mifepristone**. Moderate Study
- **Mifepristone** is predicted to increase the exposure to meglitinides **(repaglinide)**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- **Mifepristone** is predicted to increase the exposure to **montelukast**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- **Mifepristone** is predicted to increase the exposure to opioids **(alfentanil)**. Severe Theoretical
- **Mifepristone** is predicted to increase the exposure to **pioglitazone**. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- **Mifepristone** is predicted to increase the exposure to **siponimod**. Moderate Theoretical
- **Mifepristone** is predicted to increase the exposure to **sirolimus**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- **Mifepristone** moderately increases the exposure to statins **(fluvastatin)**. Moderate Study
- **Mifepristone** very markedly increases the exposure to statins **(simvastatin)**. Severe Study
- **Mifepristone** is predicted to increase the exposure to sulfonylureas **(glimepiride, tolbutamide)**. Moderate Theoretical
- **Mifepristone** is predicted to increase the exposure to oral **temsirolimus**. Severe Theoretical

Minocycline → see tetracyclines

Minoxidil → see TABLE 8 p. 1491 (hypotension)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Mirabegron

- **Mirabegron** is predicted to increase the exposure to **aliskiren**. Mild Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. Moderate Study
- **Mirabegron** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Mild Theoretical
- **Mirabegron** is predicted to increase the exposure to beta blockers, selective **(metoprolol)**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. Moderate Study
- **Mirabegron** is predicted to increase the exposure to **colchicine**. Mild Theoretical
- **Mirabegron** slightly increases the exposure to **digoxin**. Monitor concentration and adjust dose. Severe Study
- **Mirabegron** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Mirabegron** is predicted to increase the exposure to **everolimus**. Mild Theoretical
- **Mirabegron** is predicted to increase the exposure to factor XA inhibitors **(edoxaban)**. Mild Theoretical

Mirabegron (continued)

- **HIV-protease inhibitors** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. Moderate Study
- **Mirabegron** is predicted to increase the exposure to **loperamide**. Mild Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **mirabegron**. Adjust **mirabegron** dose in hepatic and renal impairment, p. 843. Moderate Study
- **Mirabegron** is predicted to increase the exposure to **sirolimus**. Mild Theoretical
- **Mirabegron** is predicted to increase the exposure to taxanes **(paclitaxel)**. Mild Theoretical
- **Mirabegron** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Severe Theoretical
- **Mirabegron** is predicted to increase the exposure to **topotecan**. Mild Theoretical

Mirtazapine → see **TABLE 13** p. 1493 (serotonin syndrome), **TABLE 11** p. 1492 (CNS depressant effects)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study → Also see **TABLE 11** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **mirtazapine**. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **mirtazapine**. Use with caution and adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **mirtazapine**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **mirtazapine**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study
- **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study

Misoprostol

- **Misoprostol** can cause uterine contractions, as can **oxytocin**; concurrent use might increase the risk of developing this effect. Avoid and for 4 hours after stopping **misoprostol**. Severe Theoretical

Mitomycin → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 5** p. 1491 (thromboembolism)

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mitomycin**. UKHSA advises avoid (refer to Green Book). Severe Theoretical

Mitotane → see **TABLE 15** p. 1493 (myelosuppression)

- **Mitotane** is predicted to decrease the exposure to 5-HT3-receptor antagonists **(ondansetron)**. Moderate Study
- **Mitotane** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **acalabrutinib**. Avoid. Severe Study
- Aldosterone antagonists **(spironolactone)** are predicted to decrease the effects of **mitotane**. Avoid. Severe Anecdotal
- **Mitotane** is predicted to decrease the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to anti-androgens **(abiraterone)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to anti-androgens **(darolutamide)**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to antiarrhythmics **(disopyramide, dronedarone)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the efficacy of antiarrhythmics **(propafenone)**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to anticholinesterases, centrally acting **(donepezil)**. Mild Study
- **Mitotane** is predicted to decrease the exposure to antiepileptics **(perampanel)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to antimalarials **(artemether)** with lumefantrine. Avoid. Severe Study
- **Mitotane** is predicted to decrease the concentration of antimalarials **(piperaquine)**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to moderately decrease the exposure to antipsychotics, second generation **(aripiprazole)**. Adjust **aripiprazole** dose, p. 427. Moderate Study
- **Mitotane** is predicted to decrease the exposure to antipsychotics, second generation **(cariprazine)**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to antipsychotics, second generation **(lurasidone)**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to antipsychotics, second generation **(paliperidone)**. Monitor and adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to antipsychotics, second generation **(quetiapine)**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to antipsychotics, second generation **(risperidone)**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **avapritinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study → Also see **TABLE 15** p. 1493
- **Mitotane** decreases the exposure to **bedaquiline**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to benzodiazepines **(alprazolam)**. Adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to benzodiazepines **(midazolam)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **bictegravir**. Avoid. Moderate Study
- **Mitotane** slightly decreases the exposure to **bortezomib**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **brigatinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. Severe Study
- **Mitotane** moderately decreases the exposure to **cabozantinib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to calcium channel blockers **(diltiazem)**. Severe Study
- **Mitotane** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** decreases the concentration of **ciclosporin**. Severe Study
- **Mitotane** is predicted to alter the effects of **cilostazol**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. Moderate Study
- **Mitotane** decreases the exposure to **clomethiazole**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Study

- **Mitotane** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to corticosteroids **(budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to corticosteroids **(fluticasone)**. Unknown Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to slightly decrease the exposure to **delamanid**. Avoid. Moderate Study
- **Mitotane** is predicted to markedly decrease the exposure to **dienogest**. Severe Study
- **Mitotane** is predicted to decrease the exposure to dipeptidylpeptidase-4 inhibitors **(linagliptin)**. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to dipeptidylpeptidase-4 inhibitors **(saxagliptin)**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **dolutegravir**. Severe Study
- **Mitotane** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. Mild Study
- **Mitotane** is predicted to decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Mitotane** is predicted to decreases the exposure to **elexacaftor**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **eliglustat**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **encorafenib**. Severe Theoretical
- **Mitotane** affects the exposure to endothelin receptor antagonists **(bosentan)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to endothelin receptor antagonists **(macitentan)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **entrectinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1057. Severe Study
- **Mitotane** is predicted to decrease the exposure to **esketamine**. Adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Mitotane** moderately decreases the exposure to **exemestane**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to factor XA inhibitors **(apixaban)**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to factor XA inhibitors **(rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study
- **Mitotane** is predicted to decrease the exposure to **fedratinib**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **fesoterodine**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **fostamatinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **glasdegib**. Avoid. Severe Study
- **Mitotane** is predicted to greatly decrease the concentration of **glecaprevir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. Moderate Study
- **Mitotane** decreases the concentration of **haloperidol**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **idelalisib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **imatinib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **irinotecan**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **ivabradine**. Adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Mitotane** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **lorlatinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to meglitinides **(repaglinide)**. Monitor blood glucose and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to monoclonal antibodies **(polatuzumab vedotin)**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **montelukast**. Mild Study
- **Mitotane** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. Severe Study
- **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **neratinib**. Avoid. Severe Study
- **Mitotane** is predicted to markedly decrease the exposure to neurokinin-1 receptor antagonists **(aprepitant)**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to neurokinin-1 receptor antagonists **(fosaprepitant)**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to neurokinin-1 receptor antagonists **(netupitant)**. Avoid. Severe Study
- **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to NNRTIs **(doravirine)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to NNRTIs **(etravirine)**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to NNRTIs **(nevirapine)**. Severe Theoretical
- **Mitotane** markedly decreases the exposure to NNRTIs **(rilpivirine)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study

Mitotane (continued)

- **Mitotane** is predicted to decrease the exposure to opioids **(buprenorphine)**. Monitor and adjust dose. Moderate Theoretical
- **Mitotane** decreases the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to opioids **(oxycodone)**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **osilodrostat**. Moderate Theoretical
- **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **ospemifene**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **pemigatinib**. Avoid. Severe Study
- **Mitotane** moderately decreases the exposure to phosphodiesterase type-4 inhibitors **(apremilast)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-4 inhibitors **(roflumilast)**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- **Mitotane** might decrease the exposure to **ponesimod**. Moderate Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- **Mitotane** is predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **relugolix**. Avoid. Moderate Study
- **Mitotane** might decrease the exposure to **remdesivir**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **selpercatinib**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **siponimod**. Severe Study
- **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **sorafenib**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **sotorasib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study → Also see **TABLE 15** p. 1493
- **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to taxanes **(cabazitaxel)**. Avoid. Moderate Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to taxanes **(docetaxel)**. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to taxanes **(paclitaxel)**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Mitotane** might decrease the exposure to **tepotinib**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. Severe Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **tivozanib**. Severe Study
- **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. Severe Study
- **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **tucatinib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **upadacitinib**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to vinca alkaloids **(vinflunine)**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to vinca alkaloids **(vinorelbine)**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study

Mitoxantrone → see anthracyclines

Mivacurium → see neuromuscular blocking drugs, non-depolarising

Mizolastine → see antihistamines, non-sedating

Moclobemide → see **TABLE 13** p. 1493 (serotonin syndrome)

FOOD AND LIFESTYLE Moclobemide is claimed to cause less potentiation of the pressor effect of tyramine than the traditional (irreversible) MAOIs, but patients should avoid consuming large amounts of tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- **Amfetamines** are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1493
- Anti-androgens **(apalutamide)** are predicted to decrease the exposure to **moclobemide**. Avoid or monitor. Mild Study
- **Moclobemide** potentially increases the exposure to benzodiazepines **(clobazam)**. Adjust dose. Moderate Theoretical
- **Bupropion** is predicted to increase the risk of severe hypertension when given with **moclobemide**. Avoid. Severe Theoretical
- **Moclobemide** is predicted to increase the exposure to **cannabidiol**. Moderate Theoretical
- **Moclobemide** is predicted to increase the exposure to **cilostazol**. Moderate Theoretical
- **Moclobemide** is predicted to decrease the efficacy of **clopidogrel**. Avoid. Moderate Study
- **Moclobemide** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **moclobemide**. Adjust **moclobemide** dose, p. 394. Mild Study
- **Levodopa** increases the risk of adverse effects when given with **moclobemide**. Moderate Study
- **Moclobemide** is predicted to increase the risk of adverse effects when given with **linezolid**. Avoid and for 14 days after stopping **moclobemide**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Moclobemide** is predicted to increase the effects of MAO-B inhibitors **(rasagiline, selegiline)**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Moclobemide** is predicted to increase the risk of adverse effects when given with MAO-B inhibitors **(safinamide)**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Methylphenidate** is predicted to cause a hypertensive crisis when given with **moclobemide**. Severe Theoretical
- **Mianserin** is predicted to increase the risk of toxicity when given with **moclobemide**. Avoid and for 1 week after stopping **mianserin**. Severe Theoretical
- **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. Severe Theoretical
- **Ozanimod** might increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. Severe Theoretical
- **Moclobemide** increases the risk of adverse effects when given with phenothiazines **(levomepromazine)**. Moderate Study
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. Severe Theoretical
- **Moclobemide** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Moclobemide** is predicted to increase the exposure to SSRIs **(escitalopram)**. Use with caution and adjust dose. Severe Study → Also see **TABLE 13** p. 1493
- Sympathomimetics, vasoconstrictor **(ephedrine, isometheptene, phenylephrine, pseudoephedrine)** are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. Severe Study
- **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. Severe Theoretical
- **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Moclobemide** moderately increases the exposure to triptans **(rizatriptan, sumatriptan)**. Avoid. Moderate Study → Also see **TABLE 13** p. 1493
- **Moclobemide** slightly increases the exposure to triptans **(zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. Moderate Study → Also see **TABLE 13** p. 1493

Modafinil

- **Modafinil** is predicted to decrease the efficacy of anti-androgens **(cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. Severe Study
- Antiepileptics **(carbamazepine, phenobarbital, primidone)** are predicted to decrease the exposure to **modafinil**. Mild Theoretical
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **modafinil** and **modafinil** is predicted to increase the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Modafinil** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Modafinil** is predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Study
- **Modafinil** is predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Modafinil** is predicted to decrease the exposure to **elbasvir**. Avoid. Unknown Theoretical
- **Modafinil** is predicted to decrease the efficacy of **estradiol**. Moderate Theoretical
- **Modafinil** is predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Modafinil** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. Moderate Theoretical
- **Modafinil** is predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Modafinil** is predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Idelalisib** is predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Modafinil** is predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- **Modafinil** is predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **modafinil**. Mild Theoretical
- **Modafinil** is predicted to decrease the exposure to NNRTIs **(doravirine)**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Severe Theoretical
- **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Modafinil** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **modafinil**. Moderate Theoretical
- **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Theoretical
- **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. Severe Theoretical
- **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical

Mogamulizumab → see monoclonal antibodies

Mometasone → see corticosteroids

Monoclonal antibodies → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 12** p. 1493 (peripheral neuropathy), **TABLE 9** p. 1492 (QT-interval prolongation)

adalimumab · alemtuzumab · atezolizumab · avelumab · basiliximab · belimumab · bevacizumab · bimekizumab · blinatumomab · brentuximab vedotin · brodalumab · canakinumab · cemiplimab · certolizumab pegol · cetuximab · daratumumab · dinutuximab · dostarlimab · dupilumab · durvalumab · eculizumab · elotuzumab · golimumab · guselkumab · infliximab · inotuzumab ozogamicin ·

- **Certolizumab pegol** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **abatacept**. Avoid. Severe Theoretical
- **Abatacept** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. Severe Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to **aminophylline**. Monitor and adjust dose. Moderate Theoretical
- **Sarilumab** potentially affects the exposure to **aminophylline**. Monitor and adjust dose. Moderate Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **aminophylline**. Monitor and adjust dose. Moderate Theoretical
- **Certolizumab pegol** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **anakinra**. Avoid. Severe Theoretical
- **Anakinra** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **golimumab**. Avoid. Severe Theoretical
- **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with monoclonal antibodies **(trastuzumab, trastuzumab emtansine)**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Anthracyclines** are predicted to increase the risk of cardiotoxicity when given with **trastuzumab deruxtecan**. Severe Theoretical → Also see **TABLE 15** p. 1493
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **polatuzumab vedotin**. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. Severe Theoretical
- Antiepileptics **(carbamazepine)** are predicted to decrease the effects of **brentuximab vedotin**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **polatuzumab vedotin**. Moderate Theoretical
- **Tocilizumab** is predicted to decrease the exposure to antiepileptics **(fosphenytoin, phenytoin)**. Monitor and adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **polatuzumab vedotin**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. Severe Theoretical
- **Tocilizumab** is predicted to decrease the exposure to benzodiazepines **(alprazolam, diazepam, midazolam)**. Monitor and adjust dose. Moderate Theoretical
- **Brentuximab vedotin** increases the risk of pulmonary toxicity when given with **bleomycin**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Tocilizumab** is predicted to decrease the exposure to **calcium channel blockers**. Monitor and adjust dose. Moderate Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to **ciclosporin**. Monitor and adjust dose. Moderate Theoretical
- **Sarilumab** potentially affects the exposure to **ciclosporin**. Monitor and adjust dose. Moderate Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **ciclosporin**. Monitor and adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **polatuzumab vedotin**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. Severe Theoretical
- **Sarilumab** potentially decreases the exposure to **combined hormonal contraceptives**. Severe Theoretical
- **Corticosteroids** are predicted to increase the risk of immunosuppression when given with **dinutuximab**. Avoid except in life-threatening situations. Severe Theoretical
- Corticosteroids **(betamethasone, deflazacort, dexamethasone, hydrocortisone, methylprednisolone, prednisolone)** are predicted to decrease the efficacy of monoclonal antibodies **(atezolizumab, ipilimumab, nivolumab, pembrolizumab)**. Use with caution or avoid. Severe Theoretical
- **Tocilizumab** is predicted to decrease the exposure to corticosteroids **(dexamethasone, methylprednisolone)**. Monitor and adjust dose. Moderate Theoretical
- **Bimekizumab** might affect the exposure to coumarins **(warfarin)**. Moderate Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to coumarins **(warfarin)**. Monitor and adjust dose. Moderate Theoretical
- **Sarilumab** potentially affects the exposure to coumarins **(warfarin)**. Monitor and adjust dose. Severe Theoretical
- **Tocilizumab** is predicted to decrease the exposure to coumarins **(warfarin)**. Monitor and adjust dose. Moderate Theoretical
- **Drugs with anticoagulant effects** (see **TABLE 3** p. 1490) cause bleeding, as can monoclonal antibodies **(bevacizumab, trastuzumab emtansine)**; concurrent use might increase the risk of developing this effect. Severe Theoretical
- **Drugs with antiplatelet effects** (see **TABLE 4** p. 1490) cause bleeding, as can monoclonal antibodies **(bevacizumab, trastuzumab emtansine)**; concurrent use might increase the risk of developing this effect. Severe Theoretical
- **Sarilumab** might cause severe infection and neutropenia when given with **etanercept**. Severe Theoretical
- **Filgotinib** is predicted to increase the risk of immunosuppression when given with monoclonal antibodies **(adalimumab, certolizumab pegol, golimumab, infliximab, rituximab, sarilumab, secukinumab, tocilizumab)**. Avoid. Severe Theoretical
- **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **fingolimod**. Avoid. Severe Theoretical
- HIV-protease inhibitors **(lopinavir, ritonavir)** are predicted to increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **polatuzumab vedotin**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **polatuzumab vedotin**. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **trastuzumab emtansine**. Avoid. Severe Theoretical
- Immunoglobulins **(normal immunoglobulin)** are predicted to alter the effects of **dinutuximab**. Avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **monoclonal antibodies**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- Macrolides **(clarithromycin)** increase the risk of neutropenia when given with **brentuximab vedotin**. Monitor and adjust dose. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **polatuzumab vedotin**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **trastuzumab emtansine**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **polatuzumab vedotin**. Moderate Theoretical
- Monoclonal antibodies **(sarilumab)** might cause severe infection and neutropenia when given with monoclonal antibodies **(adalimumab, certolizumab pegol, infliximab)**. Severe Theoretical
- Monoclonal antibodies **(sarilumab)** might cause the risk of severe infection and neutropenia when given with monoclonal antibodies **(golimumab)**. Severe Theoretical
- **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid. Severe Theoretical

- **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ponesimod**. Severe Theoretical
- Rifamycins **(rifampicin)** decrease the effects of **brentuximab vedotin**. Severe Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **polatuzumab vedotin**. Moderate Theoretical
- **Alemtuzumab** is predicted to increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid. Severe Theoretical
- **Sarilumab** potentially affects the exposure to **sirolimus**. Monitor and adjust dose. Moderate Theoretical
- **Sarilumab** is predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- **Tocilizumab** is predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Monitor and adjust dose. Moderate Study
- **Sarilumab** potentially affects the exposure to **tacrolimus**. Monitor and adjust dose. Moderate Theoretical
- **Blinatumomab** is predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Sarilumab** potentially affects the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Tocilizumab** is predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Ipilimumab** might increase the risk of hepatotoxicity when given with **vemurafenib**. Avoid. Severe Study

Montelukast

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **montelukast**. Mild Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **montelukast**. Mild Study
- **Clopidogrel** is predicted to moderately increase the exposure to **montelukast**. Moderate Study
- Fibrates **(gemfibrozil)** are predicted to moderately increase the exposure to **montelukast**. Moderate Study
- Iron chelators **(deferasirox)** are predicted to increase the exposure to **montelukast**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **montelukast**. Moderate Theoretical
- **Mifepristone** is predicted to increase the exposure to **montelukast**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **montelukast**. Mild Study
- **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **montelukast**. Mild Study
- **Selpercatinib** is predicted to increase the exposure to **montelukast**. Avoid. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **montelukast**. Moderate Theoretical

Morphine → see opioids

Moxifloxacin → see quinolones

Moxisylyte → see **TABLE 8** p. 1491 (hypotension)

Moxonidine → see **TABLE 8** p. 1491 (hypotension), **TABLE 11** p. 1492 (CNS depressant effects)

- **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492

Mycophenolate

- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **aciclovir**. Moderate Theoretical
- Oral **antacids** decrease the exposure to oral **mycophenolate**. Moderate Study
- Antifungals, azoles **(isavuconazole)** increase the exposure to **mycophenolate**. Moderate Study
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **ganciclovir**. Moderate Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **mycophenolate**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- Rifamycins **(rifampicin)** decrease the concentration of **mycophenolate**. Monitor and adjust dose. Severe Study
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. Moderate Theoretical
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. Moderate Theoretical

Nabilone → see **TABLE 11** p. 1492 (CNS depressant effects)

- **Nabilone** is predicted to increase the risk of cardiovascular adverse effects when given with **amfetamines**. Severe Theoretical

Nabumetone → see NSAIDs

Nadolol → see beta blockers, non-selective

Naldemedine

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. Severe Study
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **naldemedine**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naldemedine**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **naldemedine**. Moderate Study
- **Ciclosporin** is predicted to increase the exposure to **naldemedine**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **naldemedine**. Moderate Study
- **Grapefruit** juice is predicted to increase the exposure to **naldemedine**. Avoid or monitor. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **naldemedine**. Avoid or monitor. Moderate Study
- **Imatinib** is predicted to increase the exposure to **naldemedine**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **naldemedine**. Moderate Study
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **naldemedine**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **naldemedine**. Avoid or monitor. Moderate Study
- **Mitotane** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **naldemedine**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **naldemedine**. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **naldemedine**. Moderate Study
- Rifamycins **(rifampicin)** are predicted to markedly decrease the exposure to **naldemedine**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **naldemedine**. Avoid. Severe Study
- **Vemurafenib** is predicted to increase the exposure to **naldemedine**. Moderate Study

Nalmefene

- **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. Severe Theoretical

Naloxegol

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. Moderate Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- **Cenobamate** is predicted to decrease the exposure to **naloxegol**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- **Grapefruit** juice is predicted to increase the exposure to **naloxegol**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- **Letermovir** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **naloxegol**. Avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- **Mitotane** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- Rifamycins **(rifampicin)** are predicted to markedly decrease the exposure to **naloxegol**. Avoid. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **naloxegol**. Avoid. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **naloxegol**. Avoid or adjust dose. Moderate Theoretical

Naltrexone

- **Naltrexone** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. Severe Theoretical

Nandrolone

- **Nandrolone** is predicted to increase the anticoagulant effect of **coumarins**. Monitor and adjust dose. Severe Theoretical
- **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. Severe Theoretical

Naproxen → see NSAIDs

Naratriptan → see triptans

Natalizumab → see monoclonal antibodies

Nebivolol → see beta blockers, selective

Nefopam → see **TABLE 10** p. 1492 (antimuscarinics)

- **Nefopam** is predicted to increase the risk of serious elevations in blood pressure when given with **MAOIs, irreversible**. Avoid. Severe Theoretical

Nelarabine → see **TABLE 15** p. 1493 (myelosuppression)

Neomycin → see **TABLE 2** p. 1490 (nephrotoxicity), **TABLE 19** p. 1494 (ototoxicity), **TABLE 20** p. 1494 (neuromuscular blocking effects)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **neomycin**, the possibility of interactions should be borne in mind.

- **Neomycin** decreases the absorption of **digoxin**. Moderate Study
- **Neomycin** moderately decreases the exposure to **sorafenib**. Moderate Study

Neostigmine → see **TABLE 6** p. 1491 (bradycardia)

- **Aminoglycosides** are predicted to decrease the effects of **neostigmine**. Moderate Theoretical

Nepafenac → see NSAIDs

Neratinib → see **TABLE 1** p. 1490 (hepatotoxicity)

FOOD AND LIFESTYLE Avoid pomegranate, and pomegranate juice, as it might increase the concentration of neratinib.

- **Neratinib** is predicted to increase the exposure to **afatinib**. Moderate Study
- **Neratinib** is predicted to increase the exposure to **aliskiren**. Moderate Study
- Oral **antacids** are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. Mild Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **neratinib**. Avoid. Severe Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **neratinib**. Avoid. Severe Study → Also see **TABLE 1** p. 1490
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study → Also see **TABLE 1** p. 1490
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. Severe Study → Also see **TABLE 1** p. 1490
- **Neratinib** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Study
- **Neratinib** is predicted to increase the exposure to **berotralstat**. Severe Study
- **Neratinib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- Oral calcium salts **(calcium carbonate)** -containing antacids are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. Mild Theoretical
- **Ciclosporin** is predicted to increase the exposure to **neratinib**. Avoid or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. Severe Study
- **Neratinib** is predicted to increase the exposure to **colchicine**. Moderate Study
- **Neratinib** might affect the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study

- **Neratinib** slightly increases the exposure to **digoxin**. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **neratinib**. Severe Study
- **Neratinib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Neratinib** is predicted to increase the exposure to **everolimus**. Moderate Study
- **Neratinib** is predicted to increase the exposure to factor XA inhibitors **(apixaban)**. Moderate Theoretical
- **Neratinib** is predicted to increase the exposure to factor XA inhibitors **(edoxaban, rivaroxaban)**. Moderate Study
- **Neratinib** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Neratinib** is predicted to increase the exposure to **gilteritinib**. Moderate Theoretical
- **Grapefruit** juice is predicted to increase the exposure to **neratinib**. Avoid. Severe Theoretical
- **H_2 receptor antagonists** are predicted to decrease the exposure to **neratinib**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. Severe Study
- **Idelalisib** is predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. Severe Study
- **Imatinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- **Letermovir** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- **Neratinib** is predicted to increase the exposure to **loperamide**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **neratinib**. Avoid potent CYP3A4 inhibitors or adjust **neratinib** dose, p. 1069. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- **Mitotane** is predicted to decrease the exposure to **neratinib**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- **Nilotinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- **Neratinib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **neratinib**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **neratinib**. Severe Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **neratinib**. Avoid. Severe Study
- **Neratinib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **neratinib**. Avoid. Severe Study
- **Neratinib** is predicted to increase the exposure to **sirolimus**. Moderate Study
- Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **neratinib**. Separate administration by at least 3 hours. Mild Theoretical
- **St John's wort** is predicted to decrease the exposure to **neratinib**. Avoid. Severe Theoretical
- **Neratinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Neratinib** is predicted to increase the exposure to taxanes **(docetaxel)** (oral). Unknown Theoretical
- **Neratinib** is predicted to increase the exposure to taxanes **(paclitaxel)** (oral). Unknown Study
- **Neratinib** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Moderate Study
- **Neratinib** might increase the exposure to **tigecycline**. Mild Anecdotal → Also see **TABLE 1** p. 1490
- **Neratinib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Neratinib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Neratinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Neratinib** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 1** p. 1490

Netupitant → see neurokinin-1 receptor antagonists

Neurokinin-1 receptor antagonists

aprepitant · fosaprepitant · netupitant

- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **abemaciclib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 210. Severe Study
- **Netupitant** very slightly increases the exposure to alkylating agents **(cyclophosphamide)**. Moderate Study
- **Netupitant** is predicted to increase the exposure to alkylating agents **(ifosfamide)**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to increase the exposure to alkylating agents **(ifosfamide)**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to decrease the efficacy of anti-androgens **(cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. Severe Study
- **Aprepitant** increases the exposure to antiarrhythmics **(dronedarone)**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole)** are predicted to increase the exposure to **aprepitant**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **aprepitant**. Moderate Study

Neurokinin-1 receptor antagonists (continued)

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **netupitant**. Moderate Study
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)**. Moderate Study
- **Aprepitant** is predicted to increase the exposure to antifungals, azoles **(isavuconazole)**. Moderate Theoretical
- **Netupitant** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to antipsychotics, second generation **(cariprazine)**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to antipsychotics, second generation **(lurasidone)**. Adjust **lurasidone** dose. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to antipsychotics, second generation **(quetiapine)**. Avoid. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose, p. 1045. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **axitinib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical
- **Fosaprepitant** is predicted to increase the exposure to benzodiazepines **(alprazolam)**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to benzodiazepines **(alprazolam)**. Severe Study
- **Fosaprepitant** slightly increases the exposure to benzodiazepines **(midazolam)**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to benzodiazepines **(midazolam)**. Monitor adverse effects and adjust dose. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to beta$_2$ agonists **(salmeterol)**. Moderate Study
- **Fosaprepitant** is predicted to increase the exposure to **bosutinib**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **brigatinib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **cabozantinib**. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **aprepitant** and **aprepitant** is predicted to increase the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Fosaprepitant** is predicted to increase the exposure to **ceritinib**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ceritinib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the concentration of **ciclosporin**. Severe Study
- **Cobicistat** is predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **netupitant**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **cobimetinib**. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to oral corticosteroids **(budesonide)**. Moderate Study
- **Aprepitant** moderately increases the exposure to corticosteroids **(dexamethasone)**. Monitor and adjust dose. Moderate Study
- **Netupitant** moderately increases the exposure to corticosteroids **(dexamethasone)**. Adjust dose. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to corticosteroids **(fluticasone)**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Aprepitant** decreases the anticoagulant effect of **coumarins**. Moderate Study
- **Fosaprepitant** is predicted to decrease the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **crizotinib**. Moderate Study
- **Dabrafenib** is predicted to decrease the exposure to **netupitant**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **dabrafenib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **darifenacin**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **dasatinib**. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to slightly increase the exposure to **dienogest**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors **(saxagliptin)**. Mild Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **domperidone**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal

- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to moderately increase the exposure to **dutasteride**. Mild Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to moderately increase the exposure to **encorafenib**. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **aprepitant**. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to neurokinin-1 receptor antagonists **(fosaprepitant, netupitant)**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **erlotinib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **estradiol**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Netupitant** slightly increases the exposure to **etoposide**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. Mild Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **gefitinib**. Moderate Study
- **Fosaprepitant** is predicted to increase the concentration of **guanfacine**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **netupitant**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Fosaprepitant** is predicted to slightly increase the exposure to **ibrutinib**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **netupitant**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **imatinib**. Moderate Theoretical
- **Netupitant** is predicted to increase the exposure to **irinotecan**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to increase the exposure to intravenous **irinotecan**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **lapatinib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Fosaprepitant** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **aprepitant**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **fosaprepitant**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **netupitant**. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **aprepitant**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **maraviroc**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **naldemedine**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **nilotinib**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **aprepitant**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to neurokinin-1 receptor antagonists **(fosaprepitant, netupitant)**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **olaparib**. Avoid

Neurokinin-1 receptor antagonists (continued)
moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical

- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to opioids **(methadone)**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **pazopanib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **pemigatinib**. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical
- **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ponatinib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ranolazine**. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **regorafenib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ribociclib**. Moderate Study
- Rifamycins **(rifampicin)** are predicted to markedly decrease the exposure to **aprepitant**. Avoid. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **fosaprepitant**. Avoid. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **netupitant**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ruxolitinib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **selpercatinib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **netupitant**. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)**. Avoid. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to statins **(atorvastatin, simvastatin)**. Monitor and adjust dose. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **sunitinib**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to taxanes **(docetaxel)**. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to taxanes **(paclitaxel)**. Moderate Anecdotal
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to triptans **(eletriptan)**. Moderate Study
- **Netupitant** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Neuromuscular blocking drugs, non-depolarising → see TABLE 20 p. 1494 (neuromuscular blocking effects)

atracurium · cisatracurium · mivacurium · pancuronium · rocuronium · vecuronium

- **Anticholinesterases, centrally acting** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Theoretical
- Antiepileptics **(carbamazepine)** are predicted to decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising **(atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of (but acute use increases the effects of) neuromuscular blocking drugs, non-depolarising **(atracurium, cisatracurium, pancuronium, rocuronium, vecuronium)**. Moderate Study
- **Clindamycin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Severe Anecdotal
- **Corticosteroids** are predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. Severe Anecdotal
- **Pancuronium** is predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. Severe Anecdotal

- **Irinotecan** is predicted to decrease the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Theoretical
- Intravenous **magnesium** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Study
- **Metoclopramide** is predicted to increase the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Theoretical
- Penicillins **(piperacillin)** increase the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Study
- **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **mivacurium**. Unknown Theoretical

Nevirapine → see NNRTIs

Nicardipine → see calcium channel blockers

Nicorandil → see **TABLE 8** p. 1491 (hypotension)

- **Aspirin** is predicted to increase the risk of gastrointestinal perforation when given with **nicorandil**. Severe Theoretical
- **Corticosteroids** increase the risk of gastrointestinal perforation when given with **nicorandil**. Severe Anecdotal
- **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. Severe Theoretical
- **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1491

Nicotinic acid → see **TABLE 3** p. 1490 (anticoagulant effects)

- **Nicotinic acid** might increase the risk of rhabdomyolysis when given with **statins**. Use with caution or avoid. Severe Theoretical

Nifedipine → see calcium channel blockers

Nilotinib → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 9** p. 1492 (QT-interval prolongation)

- **Nilotinib** is predicted to increase the exposure to **abemaciclib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **acalabrutinib**. Avoid or monitor. Severe Study
- **Nilotinib** is predicted to increase the exposure to aldosterone antagonists **(eplerenone)**. Adjust **eplerenone** dose, p. 210. Severe Study
- **Nilotinib** is predicted to increase the exposure to alpha blockers **(tamsulosin)**. Moderate Theoretical
- Oral **antacids** might affect the absorption of oral **nilotinib**. Separate administration by at least 2 hours. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **nilotinib**. Moderate Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to antihistamines, non-sedating **(mizolastine)**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to antihistamines, non-sedating **(rupatadine)**. Avoid. Moderate Study
- **Nilotinib** is predicted to increase the concentration of antimalarials **(piperaquine)**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to antipsychotics, second generation **(cariprazine)**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to antipsychotics, second generation **(lurasidone)**. Adjust **lurasidone** dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to antipsychotics, second generation **(quetiapine)**. Avoid. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **avapritinib**. Avoid or adjust **avapritinib** dose, p. 1045. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **axitinib**. Moderate Study → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to **bedaquiline**. Avoid prolonged use. Mild Theoretical → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to benzodiazepines **(alprazolam)**. Severe Study
- **Nilotinib** is predicted to increase the exposure to benzodiazepines **(midazolam)**. Monitor adverse effects and adjust dose. Severe Study
- **Nilotinib** is predicted to increase the exposure to **bosutinib**. Avoid or adjust dose. Severe Study → Also see **TABLE 15** p. 1493 → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **brigatinib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **buspirone**. Use with caution and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 15** p. 1493 → Also see **TABLE 9** p. 1492
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **nilotinib**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- Oral calcium salts **(calcium carbonate)** -containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **ceritinib**. Moderate Study → Also see **TABLE 15** p. 1493 → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the concentration of **ciclosporin**. Severe Study
- **Cobicistat** is predicted to increase the exposure to **nilotinib**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **cobimetinib**. Severe Study
- **Nilotinib** is predicted to increase the exposure to **colchicine**. Adjust **colchicine** dose with moderate CYP3A4 inhibitors, p. 1212. Severe Study
- **Nilotinib** is predicted to increase the exposure to corticosteroids **(methylprednisolone)**. Monitor and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **dabrafenib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **darifenacin**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **dasatinib**. Severe Study → Also see **TABLE 15** p. 1493 → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to slightly increase the exposure to **dienogest**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors **(saxagliptin)**. Mild Study
- **Nilotinib** is predicted to increase the exposure to **domperidone**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to dopamine receptor agonists **(bromocriptine)**. Severe Theoretical
- **Nilotinib** is predicted to increase the concentration of dopamine receptor agonists **(cabergoline)**. Moderate Anecdotal
- **Nilotinib** is predicted to moderately increase the exposure to **dutasteride**. Mild Study
- **Nilotinib** is predicted to increase the exposure to **elexacaftor**. Adjust tezacaftor with ivacaftor and elexacaftor p. 320 dose with moderate CYP3A4 inhibitors. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Nilotinib** is predicted to moderately increase the exposure to **encorafenib**. Moderate Study → Also see **TABLE 9** p. 1492
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **entrectinib**. Avoid moderate CYP3A4 inhibitors or adjust **entrectinib** dose, p. 1056. Severe Theoretical → Also see **TABLE 9** p. 1492

Nilotinib (continued)

- **Nilotinib** is predicted to increase the risk of ergotism when given with **ergometrine**. Severe Theoretical
- **Nilotinib** is predicted to increase the risk of ergotism when given with **ergotamine**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **erlotinib**. Moderate Study
- **Nilotinib** is predicted to increase the concentration of **everolimus**. Avoid or adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **fedratinib**. Monitor and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **fesoterodine**. Adjust **fesoterodine** dose with moderate CYP3A4 inhibitors in hepatic and renal impairment, p. 840. Mild Study
- **Nilotinib** is predicted to increase the exposure to **gefitinib**. Moderate Study
- **Grapefruit** juice is predicted to increase the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. Moderate Theoretical
- **H_2 receptor antagonists** might affect the absorption of **nilotinib**. **H_2 receptor antagonists** should be taken 10 hours before or 2 hours after **nilotinib**. Mild Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **nilotinib**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose with moderate CYP3A4 inhibitors, p. 1062. Severe Study → Also see **TABLE 15** p. 1493
- **Idelalisib** is predicted to increase the exposure to **nilotinib**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **imatinib**. Moderate Study → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to **ivabradine**. Adjust **ivabradine** dose, p. 231. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **ivacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see ivacaftor p. 317, tezacaftor with ivacaftor p. 319, and tezacaftor with ivacaftor and elexacaftor p. 320. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **lapatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Letermovir** is predicted to increase the exposure to **nilotinib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **lomitapide**. Avoid. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- Macrolides **(erythromycin)** are predicted to increase the exposure to **nilotinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **midostaurin**. Moderate Theoretical
- **Mitotane** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to **naldemedine**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **naloxegol**. Adjust **naloxegol** dose and monitor adverse effects, p. 67. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **neratinib**. Avoid moderate CYP3A4 inhibitors or adjust **neratinib** dose and monitor for gastrointestinal adverse effects, p. 1069. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **nilotinib**. Moderate Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **nilotinib**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to opioids **(methadone)**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **pazopanib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **pemigatinib**. Severe Study
- **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil)**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(tadalafil)**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(vardenafil)**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **ponatinib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **regorafenib**. Moderate Study → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 15** p. 1493 → Also see **TABLE 9** p. 1492
- Rifamycins **(rifampicin)** are predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study
- **Nilotinib** is predicted to increase the exposure to **ruxolitinib**. Moderate Study → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **selpercatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Nilotinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study
- **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- Oral **sodium bicarbonate** -containing antacids might affect the exposure to oral **nilotinib**. Separate administration by at least 2 hours. Moderate Study
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **nilotinib**. Separate administration by at least 2 hours. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to SSRIs **(dapoxetine)**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to statins **(simvastatin)**. Monitor and adjust dose. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **sunitinib**. Moderate Study → Also see **TABLE 15** p. 1493 → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Nilotinib** is predicted to increase the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to taxanes **(docetaxel)**. Severe Study → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to taxanes **(paclitaxel)**. Moderate Anecdotal → Also see **TABLE 15** p. 1493

- **Nilotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1493 → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study

Nimodipine → see calcium channel blockers

Nintedanib → see **TABLE 4** p. 1490 (antiplatelet effects)

- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **nintedanib**. Moderate Study
- Antiepileptics **(phenobarbital, phenytoin)** are predicted to decrease the exposure to **nintedanib**. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- Antifungals, azoles **(voriconazole)** are predicted to increase the exposure to **nintedanib**. Moderate Theoretical
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- **Ciclosporin** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **nintedanib**. Moderate Theoretical
- HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **nintedanib**. Moderate Theoretical
- HIV-protease inhibitors **(lopinavir, ritonavir)** are predicted to increase the exposure to **nintedanib**. Moderate Study
- **Ivacaftor** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Macrolides** are predicted to increase the exposure to **nintedanib**. Moderate Study
- **Neratinib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **nintedanib**. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **nintedanib**. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **nintedanib**. Moderate Study
- **Vandetanib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **nintedanib**. Moderate Study

Niraparib → see **TABLE 15** p. 1493 (myelosuppression)

Nirmatrelvir

- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **abemaciclib**. Avoid or adjust **abemaciclib** dose, p. 1042. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **afatinib**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of alpha blockers **(alfuzosin)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **amfetamines**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **aminophylline**. Adjust dose. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. Severe Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of antiarrhythmics **(amiodarone, dronedarone, flecainide, propafenone)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of antiarrhythmics **(lidocaine)**. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. Severe Study
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of antiepileptics **(lamotrigine, valproate)**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of antifungals, azoles **(isavuconazole)**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir increases the exposure to antifungals, azoles **(itraconazole)**. Severe Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of antifungals, azoles **(ketoconazole)**. Adjust dose. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of antifungals, azoles **(voriconazole)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of antimalarials **(atovaquone)**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of antipsychotics, second generation **(clozapine, lurasidone, quetiapine)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of antipsychotics, second generation **(risperidone)**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **bedaquiline**. Avoid or monitor. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of benzodiazepines **(alprazolam)**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of benzodiazepines **(clonazepam, diazepam, flurazepam)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of benzodiazepines **(midazolam)**. Avoid or adjust dose. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of beta$_2$ agonists **(salmeterol)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **bupropion**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **buspirone**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **calcium channel blockers**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ceritinib**. Avoid or adjust **ceritinib** dose, p. 1050. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ciclosporin**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **colchicine**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **combined hormonal contraceptives**

Nirmatrelvir (continued)

(containing ethinylestradiol). Use additional contraceptive precautions. Moderate Theoretical

- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of corticosteroids **(beclometasone)** (risk with beclometasone is likely to be lower than with other corticosteroids). Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of corticosteroids **(betamethasone, budesonide, ciclesonide, deflazacort, dexamethasone, fludrocortisone, fluticasone, hydrocortisone, methylprednisolone, mometasone, prednisolone, triamcinolone)**. Avoid or monitor adverse effects and consider beclomethasone as an alternative. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to affect the concentration of coumarins **(warfarin)**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **dasatinib**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **delamanid**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **digoxin**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **encorafenib**. Avoid or monitor. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of endothelin receptor antagonists **(bosentan)**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ergometrine**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ergotamine**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **everolimus**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of factor XA inhibitors **(apixaban, rivaroxaban)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **fostamatinib**. Monitor adverse effects and adjust dose. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **fusidate**. Avoid. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **glecaprevir**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **grazoprevir**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **haloperidol**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ibrutinib**. Avoid or adjust **ibrutinib** dose, p. 1062. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **lomitapide**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of macrolides **(erythromycin)**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **maraviroc**. Refer to specialist literature. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **methylphenidate**. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. Severe Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **neratinib**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **nilotinib**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of NNRTIs **(efavirenz)**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of NSAIDs **(piroxicam)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of opioids **(buprenorphine)**. Monitor and adjust dose. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of opioids **(fentanyl)**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of opioids **(methadone)**. Adjust dose. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of opioids **(morphine)**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of opioids **(pethidine)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of phosphodiesterase type-5 inhibitors **(sildenafil)**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of phosphodiesterase type-5 inhibitors **(tadalafil)**. Adjust dose—consult product literature. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pibrentasvir**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pimozide**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ranolazine**. Avoid. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. Severe Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of rifamycins **(rifabutin)**. Adjust dose. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **riociguat**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **sirolimus**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of statins **(atorvastatin, rosuvastatin)**. Adjust dose. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of statins **(simvastatin)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **tacrolimus**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **theophylline**. Adjust dose. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of thrombin inhibitors **(dabigatran)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir might decrease the efficacy of thyroid hormones **(levothyroxine)**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **trazodone**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of tricyclic antidepressants **(amitriptyline, imipramine, nortriptyline)**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **venetoclax**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of vinca alkaloids **(vinblastine, vincristine)**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **zolpidem**. Severe Theoretical

Nitisinone

- **Nitisinone** is predicted to increase the exposure to **adefovir**. Moderate Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Nitisinone** is predicted to increase the exposure to cephalosporins **(cefaclor)**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Nitisinone** is predicted to increase the exposure to coumarins **(warfarin)**. Moderate Study
- **Nitisinone** is predicted to increase the exposure to **ganciclovir**. Moderate Study
- **Nitisinone** is predicted to increase the exposure to H_2 receptor antagonists **(cimetidine, famotidine)**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Nitisinone** is predicted to increase the exposure to loop diuretics **(furosemide)**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Nitisinone** is predicted to increase the exposure to **methotrexate**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Nitisinone** is predicted to increase the exposure to NSAIDs **(celecoxib)**. Moderate Study
- **Nitisinone** is predicted to increase the exposure to **oseltamivir**. Moderate Study
- **Nitisinone** is predicted to increase the exposure to penicillins **(benzylpenicillin)**. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- **Nitisinone** is predicted to increase the exposure to sulfonylureas **(glimepiride, tolbutamide)**. Moderate Study

Nitrates → see **TABLE 7** p. 1491 (first-dose hypotension), **TABLE 8** p. 1491 (hypotension)

glyceryl trinitrate • isosorbide dinitrate • isosorbide mononitrate

PHARMACOLOGY Drugs with antimuscarinic effects can cause dry mouth, which can reduce the effectiveness of sublingual glyceryl trinitrate tablets.

- **Acetylcysteine** might increase the vasodilatory effects of **glyceryl trinitrate**. Moderate Theoretical
- **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Avoid. Severe Theoretical
- **Nitrates** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. Severe Study → Also see **TABLE 8** p. 1491

Nitrazepam → see benzodiazepines

Nitrofurantoin → see **TABLE 12** p. 1493 (peripheral neuropathy)

- **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Use with caution or avoid. Severe Theoretical
- **Nitrofurantoin** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- Oral **magnesium** trisilicate decreases the absorption of oral **nitrofurantoin**. Moderate Study

Nitroprusside → see **TABLE 8** p. 1491 (hypotension)

- **Nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with anaesthetics, local **(prilocaine)**. Severe Theoretical
- **Nitroprusside** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical

Nitrous oxide → see **TABLE 8** p. 1491 (hypotension), **TABLE 11** p. 1492 (CNS depressant effects)

- **Nitrous oxide** potentially increases the risk of methotrexate toxicity when given with **methotrexate**. Avoid. Severe Study

Nivolumab → see monoclonal antibodies

Nizatidine → see H_2 receptor antagonists

NNRTIs → see **TABLE 9** p. 1492 (QT-interval prolongation)

doravirine • efavirenz • etravirine • nevirapine • rilpivirine

- **Efavirenz** is predicted to decrease the exposure to **abrocitinib**. Avoid. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **acalabrutinib**. Severe Study
- Oral **antacids** are predicted to decrease the exposure to oral **rilpivirine**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. Severe Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **doravirine**. Avoid. Severe Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **nevirapine**. Severe Study
- Anti-androgens **(apalutamide, enzalutamide)** markedly decrease the exposure to **rilpivirine**. Avoid. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the efficacy of anti-androgens **(cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to anti-androgens **(darolutamide)**. Avoid. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to antiarrhythmics **(dronedarone)**. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine)** slightly decrease the exposure to **efavirenz** and **efavirenz** slightly decreases the exposure to antiepileptics **(carbamazepine)**. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **doravirine**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** markedly decrease the exposure to **rilpivirine**. Avoid. Severe Study
- Antiepileptics **(fosphenytoin, phenytoin)** slightly decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Severe Theoretical
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the exposure to **doravirine**. Avoid. Severe Theoretical
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the concentration of **rilpivirine**. Avoid. Severe Theoretical
- Antiepileptics **(phenobarbital)** are predicted to decrease the exposure to **efavirenz** and **efavirenz** affects the concentration of antiepileptics **(phenobarbital)**. Severe Theoretical
- **Nevirapine** is predicted to decrease the concentration of antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** and antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **nevirapine**. Severe Study
- **Efavirenz** is predicted to affect the efficacy of antiepileptics **(primidone)** and antiepileptics **(primidone)** are predicted to slightly decrease the exposure to **efavirenz**. Severe Theoretical
- Antifungals, azoles **(fluconazole)** slightly to moderately increase the exposure to **nevirapine**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Theoretical
- **Efavirenz** slightly decreases the exposure to antifungals, azoles **(itraconazole)**. Avoid and for 14 days after stopping **efavirenz**. Moderate Study
- **Nevirapine** moderately decreases the exposure to antifungals, azoles **(itraconazole)**. Avoid and for 14 days after stopping **nevirapine**. Moderate Study

NNRTIs (continued)

- **Efavirenz** moderately decreases the exposure to antifungals, azoles **(ketoconazole)**. Severe Study
- **Nevirapine** moderately decreases the exposure to antifungals, azoles **(ketoconazole)**. Avoid. Severe Study
- **Efavirenz** slightly decreases the exposure to antifungals, azoles **(posaconazole)**. Avoid. Moderate Study
- **Efavirenz** moderately decreases the exposure to antifungals, azoles **(voriconazole)** and antifungals, azoles **(voriconazole)** slightly increase the exposure to **efavirenz**. Adjust dose. Severe Study → Also see **TABLE 9** p. 1492
- **Nevirapine** is predicted to decrease the exposure to antifungals, azoles **(voriconazole)** and antifungals, azoles **(voriconazole)** increase the exposure to **nevirapine**. Monitor and adjust dose. Severe Theoretical
- **Efavirenz** decreases the concentration of antimalarials **(artemether)**. Severe Study → Also see **TABLE 9** p. 1492
- **Etravirine** decreases the exposure to antimalarials **(artemether)**. Moderate Study
- **Efavirenz** moderately decreases the exposure to antimalarials **(atovaquone)**. Avoid. Moderate Study
- **Efavirenz** affects the exposure to antimalarials **(proguanil)**. Avoid. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to antipsychotics, second generation **(cariprazine)**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to antipsychotics, second generation **(lurasidone)**. Monitor and adjust dose. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to antipsychotics, second generation **(quetiapine)**. Moderate Study
- **Etravirine** is predicted to decrease the exposure to **avapritinib**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **avapritinib**. Avoid. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **axitinib**. Moderate Study
- **Etravirine** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of benzodiazepines **(alprazolam)**. Moderate Theoretical
- **Etravirine** has been reported to increase the concentration of benzodiazepines **(clobazam)**. Moderate Anecdotal
- **Nevirapine** is predicted to decrease the concentration of benzodiazepines **(clonazepam)** and benzodiazepines **(clonazepam)** are predicted to decrease the concentration of **nevirapine**. Moderate Theoretical
- **Etravirine** is predicted to increase the exposure to benzodiazepines **(diazepam)**. Avoid. Severe Theoretical
- **Efavirenz** is predicted to alter the effects of benzodiazepines **(midazolam)**. Avoid. Moderate Theoretical
- **Nevirapine** decreases the concentration of benzodiazepines **(midazolam)**. Monitor and adjust dose. Moderate Study
- **Etravirine** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **bosutinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **brigatinib**. Avoid. Moderate Study
- **Efavirenz** is predicted to decrease the exposure to **bupropion**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **cabozantinib**. Moderate Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- Oral calcium salts **(calcium carbonate)** -containing antacids are predicted to decrease the exposure to oral **rilpivirine**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. Severe Theoretical
- **Efavirenz** is predicted to decrease the concentration of **caspofungin**. Adjust dose. Moderate Study
- **Nevirapine** is predicted to decrease the concentration of **caspofungin**. Adjust dose. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ceritinib**. Severe Study → Also see **TABLE 9** p. 1492
- **Efavirenz** decreases the concentration of **ciclosporin**. Monitor concentration and adjust dose. Moderate Study
- **Nevirapine** is predicted to decrease the concentration of **ciclosporin**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Study
- Corticosteroids **(dexamethasone)** are predicted to decrease the concentration of **rilpivirine**. Avoid multiple-dose dexamethasone. Severe Theoretical
- **Efavirenz** is predicted to affect the concentration of **coumarins**. Adjust dose. Moderate Theoretical
- **Etravirine** increases the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Nevirapine** potentially alters the anticoagulant effect of **coumarins**. Severe Anecdotal
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **crizotinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Dabrafenib** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Severe Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **dabrafenib**. Moderate Study
- **Dabrafenib** is predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **dasatinib**. Severe Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Efavirenz** moderately decreases the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. Severe Study
- **Etravirine** moderately decreases the exposure to **dolutegravir**. Adjust **dolutegravir** dose unless given with atazanavir, darunavir, or lopinavir (all boosted with ritonavir), p. 696. Severe Study
- **Nevirapine** is predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. Severe Study
- **Etravirine** is predicted to decrease the exposure to **elbasvir**. Avoid. Unknown Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to moderately decrease the exposure to **elbasvir**. Avoid. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **eliglustat**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **etravirine**. Avoid. Severe Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **nevirapine**. Severe Theoretical

- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **rilpivirine**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **entrectinib**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **erlotinib**. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the efficacy of **estradiol**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Nevirapine** is predicted to decrease the exposure to factor XA inhibitors **(rivaroxaban)**. Severe Anecdotal
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **fedratinib**. Avoid. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study
- NNRTIs **(efavirenz, etravirine, nevirapine)** are predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. Moderate Theoretical → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **glecaprevir**. Avoid. Severe Study
- **Etravirine** is predicted to decrease the exposure to **grazoprevir**. Avoid. Mild Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to markedly decrease the exposure to **grazoprevir**. Avoid. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **guanfacine**. Adjust dose. Moderate Theoretical
- **H_2 receptor antagonists** are predicted to decrease the exposure to **rilpivirine**. **H_2 receptor antagonists** should be taken 12 hours before or 4 hours after **rilpivirine**. Severe Study
- **Efavirenz** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. Severe Study
- HIV-protease inhibitors **(tipranavir)** decrease the exposure to **etravirine**. Avoid. Severe Study
- **Etravirine** increases the exposure to HIV-protease inhibitors **(fosamprenavir)** boosted with ritonavir. Refer to specialist literature. Moderate Study
- **Nevirapine** decreases the exposure to **HIV-protease inhibitors**. Refer to specialist literature. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **idelalisib**. Avoid. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **imatinib**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ivacaftor**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- **Efavirenz** is predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- **Etravirine** is predicted to decrease the exposure to **letermovir**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **doravirine**. Avoid. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **nevirapine**. Moderate Theoretical
- **Etravirine** decreases the exposure to macrolides **(clarithromycin)** and macrolides **(clarithromycin)** slightly increase the exposure to **etravirine**. Severe Study
- NNRTIs **(efavirenz, nevirapine)** decrease the exposure to macrolides **(clarithromycin)**. Moderate Study → Also see **TABLE 9** p. 1492
- **Efavirenz** decreases the exposure to **maraviroc**. Refer to specialist literature. Severe Theoretical
- **Etravirine** slightly decreases the exposure to **maraviroc**. Refer to specialist literature. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **midostaurin**. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **doravirine**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **nevirapine**. Severe Theoretical
- **Mitotane** markedly decreases the exposure to **rilpivirine**. Avoid. Severe Study
- **Modafinil** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **neratinib**. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to neurokinin-1 receptor antagonists **(aprepitant)**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to neurokinin-1 receptor antagonists **(fosaprepitant, netupitant)**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **efavirenz**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to NNRTIs **(doravirine)**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Severe Theoretical
- NNRTIs **(etravirine)** are predicted to decrease the exposure to NNRTIs **(doravirine)**. Avoid. Severe Theoretical
- NNRTIs **(nevirapine)** decrease the concentration of NNRTIs **(efavirenz)**. Avoid. Severe Study
- NNRTIs **(efavirenz)** are predicted to decrease the exposure to NNRTIs **(etravirine)**. Avoid. Severe Study
- NNRTIs **(nevirapine)** are predicted to decrease the exposure to NNRTIs **(etravirine)**. Avoid. Severe Study
- NNRTIs **(efavirenz, etravirine, nevirapine)** are predicted to decrease the exposure to NNRTIs **(rilpivirine)**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Nevirapine** is predicted to slightly decrease the exposure to NRTIs **(zidovudine)**. Refer to specialist literature. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Efavirenz** moderately decreases the exposure to opioids **(buprenorphine)**. Adjust dose. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** decrease the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study → Also see **TABLE 9** p. 1492
- **Etravirine** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. Severe Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ospemifene**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **pazopanib**. Severe Study → Also see **TABLE 9** p. 1492
- **Efavirenz** is predicted to decrease the exposure to **pemigatinib** and **pemigatinib** might decrease the exposure to **efavirenz**. Avoid or monitor. Severe Study

NNRTIs (continued)

- **Nevirapine** is predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. Severe Study
- **Etravirine** moderately decreases the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Pitolisant** is predicted to decrease the exposure to **efavirenz**. Mild Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ponatinib**. Severe Study
- **Proton pump inhibitors** are predicted to decrease the exposure to oral **rilpivirine**. Avoid. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **regorafenib**. Severe Study
- **Efavirenz** is predicted to decrease the exposure to **relugolix**. Avoid. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1492
- Rifamycins **(rifabutin)** moderately decrease the exposure to **doravirine**. Adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Moderate Study
- Rifamycins **(rifabutin)** decrease the exposure to **etravirine**. Moderate Study
- Rifamycins **(rifabutin)** modestly decrease the exposure to **rilpivirine**. Avoid or adjust dose—consult product literature. Severe Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **doravirine**. Avoid. Severe Study
- Rifamycins **(rifampicin)** slightly decrease the exposure to **efavirenz**. Adjust dose. Severe Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **etravirine**. Avoid. Severe Theoretical
- Rifamycins **(rifampicin)** decrease the concentration of **nevirapine**. Avoid. Severe Study
- Rifamycins **(rifampicin)** markedly decrease the exposure to **rilpivirine**. Avoid. Severe Study
- **Efavirenz** slightly decreases the exposure to rifamycins **(rifabutin)**. Adjust dose. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **selpercatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. Severe Theoretical
- **Doravirine** is predicted to decrease the exposure to **sirolimus**. Monitor **sirolimus** concentration and adjust dose, p. 906. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. Moderate Theoretical
- Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **rilpivirine**. **Rilpivirine** should be taken 4 hours before or 2 hours after antacids. Severe Theoretical
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **rilpivirine**. Separate administration by at least 2 hours. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **sorafenib**. Moderate Study → Also see **TABLE 9** p. 1492
- **St John's wort** is predicted to decrease the exposure to **etravirine**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to NNRTIs **(doravirine, rilpivirine)**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the concentration of NNRTIs **(efavirenz, nevirapine)**. Avoid. Severe Theoretical
- **Etravirine** slightly decreases the exposure to statins **(atorvastatin)**. Monitor and adjust dose. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- **Etravirine** is predicted to increase the exposure to statins **(fluvastatin)**. Adjust dose. Severe Theoretical
- **Etravirine** is predicted to decrease the exposure to statins **(simvastatin)**. Adjust dose. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **sunitinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Doravirine** is predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 907. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to taxanes **(cabazitaxel)**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to taxanes **(docetaxel)**. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to taxanes **(paclitaxel)**. Avoid. Severe Study
- **Telotristat ethyl** is predicted to decrease the exposure to **doravirine**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **tofacitinib**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **vandetanib**. Moderate Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **vemurafenib**. Severe Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical

Noradrenaline/norepinephrine → see sympathomimetics, vasoconstrictor

Norethisterone

- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Griseofulvin** potentially decreases the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Modafinil** is predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal

- **Rifamycins** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **St John's wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. Severe Theoretical
- **Norethisterone** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **norethisterone**. Avoid or use additional contraceptive precautions. Severe Theoretical

Normal immunoglobulin → see immunoglobulins

Nortriptyline → see tricyclic antidepressants

NRTIs → see **TABLE 2** p. 1490 (nephrotoxicity), **TABLE 12** p. 1493 (peripheral neuropathy)

abacavir · emtricitabine · lamivudine · zidovudine

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **abacavir**. Moderate Theoretical
- Antiepileptics **(valproate)** slightly increase the exposure to **zidovudine**. Moderate Study
- Antifungals, azoles **(fluconazole)** slightly increase the exposure to **zidovudine**. Moderate Study
- Antimalarials **(pyrimethamine)** are predicted to increase the risk of adverse effects when given with **zidovudine**. Severe Theoretical
- **Zidovudine** increases the risk of haematological toxicity when given with **aspirin** (high-dose). Severe Study
- **Zidovudine** increases the risk of haematological toxicity when given with **flucytosine**. Monitor and adjust dose. Severe Theoretical
- HIV-protease inhibitors **(tipranavir)** slightly decrease the exposure to **abacavir**. Avoid. Severe Study
- HIV-protease inhibitors **(tipranavir)** slightly decrease the exposure to **zidovudine**. Avoid. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **zidovudine**. Moderate Theoretical
- Macrolides **(clarithromycin)** decrease the absorption of **zidovudine**. Separate administration by at least 2 hours. Moderate Study
- NNRTIs **(nevirapine)** are predicted to slightly decrease the exposure to **zidovudine**. Refer to specialist literature. Severe Theoretical
- NRTIs **(zidovudine)** increase the risk of toxicity when given with NRTIs **(lamivudine)**. Severe Anecdotal
- **Zidovudine** increases the risk of haematological toxicity when given with **NSAIDs**. Severe Study → Also see **TABLE 2** p. 1490
- **Ribavirin** increases the risk of anaemia and/or leucopenia when given with **zidovudine**. Avoid. Severe Study
- **Teriflunomide** is predicted to increase the exposure to **zidovudine**. Moderate Theoretical
- **Trimethoprim** slightly increases the exposure to **lamivudine**. Moderate Study

NSAIDs → see **TABLE 18** p. 1494 (hyponatraemia), **TABLE 2** p. 1490 (nephrotoxicity), **TABLE 16** p. 1494 (increased serum potassium), **TABLE 4** p. 1490 (antiplatelet effects)

aceclofenac · benzydamine · bromfenac · celecoxib · dexketoprofen · diclofenac · etodolac · etoricoxib · felbinac · flurbiprofen · ibuprofen · indometacin · ketoprofen · ketorolac · mefenamic acid · meloxicam · nabumetone · naproxen · nepafenac · parecoxib · phenazone · piroxicam · sulindac · tenoxicam · tiaprofenic acid · tolfenamic acid

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **NSAIDs**, the possibility of interactions should be borne in mind.

- **Celecoxib** is predicted to increase the exposure to antiarrhythmics **(flecainide, propafenone)**. Monitor and adjust dose. Moderate Theoretical
- Antifungals, azoles **(fluconazole)** moderately increase the exposure to **celecoxib**. Adjust **celecoxib** dose, p. 1225. Moderate Study
- Antifungals, azoles **(fluconazole)** increase the exposure to **parecoxib**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(voriconazole)** slightly increase the exposure to **diclofenac**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(voriconazole)** moderately increase the exposure to **ibuprofen**. Adjust dose. Moderate Study
- **NSAIDs** are predicted to increase the risk of gastrointestinal irritation when given with bisphosphonates **(alendronate, ibandronate)**. Moderate Study
- **NSAIDs** are predicted to increase the risk of renal impairment when given with bisphosphonates **(clodronate)**. Moderate Study
- **Ceritinib** is predicted to increase the exposure to NSAIDs **(celecoxib, diclofenac)**. Adjust dose. Moderate Theoretical
- **Ciclosporin** increases the concentration of **diclofenac**. Severe Study → Also see **TABLE 2** p. 1490 → Also see **TABLE 16** p. 1494
- **Sulindac** might increases the exposure to **cladribine**. Avoid or adjust dose. Moderate Theoretical
- **Etoricoxib** increases the exposure to **combined hormonal contraceptives**. Moderate Study
- **NSAIDs** increase the risk of gastrointestinal bleeding when given with **corticosteroids**. Severe Study
- **NSAIDs** increase the risk of renal impairment when given with **daptomycin**. Moderate Theoretical
- **Indometacin** increases the concentration of **digoxin**. Severe Study
- **Erlotinib** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. Severe Theoretical
- **Etoricoxib** increases the exposure to **hormone replacement therapy**. Moderate Study
- **NSAIDs** are predicted to increase the risk of gastrointestinal bleeding when given with iron chelators **(deferasirox)**. Severe Theoretical
- **Diclofenac** is predicted to increase the exposure to iron chelators **(deferiprone)**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to NSAIDs **(indometacin, ketoprofen)**. Moderate Theoretical
- **NSAIDs** increase the concentration of **lithium**. Monitor and adjust dose. Severe Study
- **NSAIDs** are predicted to increase the risk of toxicity when given with **methotrexate**. Severe Study → Also see **TABLE 2** p. 1490
- **NSAIDs** (high-dose) are predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Nicorandil** is predicted to increase the risk of gastrointestinal perforation when given with **NSAIDs**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **piroxicam**. Avoid. Severe Theoretical
- **Nitisinone** is predicted to increase the exposure to **celecoxib**. Moderate Study
- NRTIs **(zidovudine)** increase the risk of haematological toxicity when given with **NSAIDs**. Severe Study → Also see **TABLE 2** p. 1490
- **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 2** p. 1490
- **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. Severe Theoretical
- **Mefenamic acid** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Theoretical → Also see **TABLE 4** p. 1490
- Rifamycins **(rifampicin)** moderately decrease the exposure to NSAIDs **(celecoxib, diclofenac, etoricoxib)**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to NSAIDs **(indometacin, ketoprofen)**. Moderate Theoretical
- **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. Severe Theoretical → Also see **TABLE 18** p. 1494

Obeticholic acid

- **Obeticholic acid** decreases the anticoagulant effect of coumarins **(warfarin)**. Severe Study
- **Obeticholic acid** is predicted to increase the exposure to **theophylline**. Severe Theoretical
- **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. Severe Theoretical

Obinutuzumab → see monoclonal antibodies

Ocrelizumab → see monoclonal antibodies

Octreotide
- **Octreotide** decreases the absorption of oral **ciclosporin**. Adjust **ciclosporin** dose, p. 904. Severe Anecdotal
- **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. Moderate Study

Ofatumumab → see monoclonal antibodies
Ofloxacin → see quinolones
Olanzapine → see antipsychotics, second generation
Olaparib → see **TABLE 15** p. 1493 (myelosuppression)

FOOD AND LIFESTYLE Bitter (Seville) orange is predicted to increase the exposure to olaparib.

- **Olaparib** might increase the exposure to **aliskiren**. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Study
- **Olaparib** might increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Theoretical
- **Olaparib** might alter the exposure to antipsychotics, second generation **(quetiapine)**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical
- **Olaparib** might alter the exposure to **ciclosporin**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Study
- **Olaparib** might increase the exposure to **colchicine**. Moderate Theoretical
- **Olaparib** potentially affects the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Olaparib** might increase the exposure to **digoxin**. Moderate Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Olaparib** might alter the exposure to **ergometrine**. Moderate Theoretical
- **Olaparib** might alter the exposure to **ergotamine**. Moderate Theoretical
- **Olaparib** might increase the exposure to **everolimus**. Moderate Theoretical
- **Olaparib** might increase the exposure to factor XA inhibitors **(edoxaban, rivaroxaban)**. Moderate Theoretical
- **Grapefruit** juice is predicted to increase the exposure to **olaparib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Study
- **Imatinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Letermovir** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical
- **Olaparib** might increase the exposure to **loperamide**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **olaparib**. Avoid potent CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1493
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **olaparib**. Avoid moderate CYP3A4 inhibitors or adjust **olaparib** dose, p. 1088. Moderate Theoretical → Also see **TABLE 15** p. 1493
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Olaparib** might alter the exposure to opioids **(alfentanil)**. Moderate Theoretical
- **Olaparib** might alter the exposure to **pimozide**. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Olaparib** might increase the exposure to **sirolimus**. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Olaparib** is predicted to increase the exposure to **statins**. Moderate Theoretical
- **Olaparib** might alter the exposure to **tacrolimus**. Moderate Theoretical
- **Olaparib** might increase the exposure to **talazoparib**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Olaparib** might increase the exposure to taxanes **(docetaxel, paclitaxel)**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Olaparib** might alter the exposure to **temsirolimus**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Olaparib** might increase the exposure to thrombin inhibitors **(dabigatran)**. Moderate Theoretical
- **Olaparib** might increase the exposure to **topotecan**. Moderate Theoretical → Also see **TABLE 15** p. 1493

Olmesartan → see angiotensin-II receptor antagonists
Olodaterol → see beta$_2$ agonists
Omega-3-acid ethyl esters → see **TABLE 4** p. 1490 (antiplatelet effects)
- **Omega-3-acid ethyl esters** might enhance the blood pressure-lowering effects of **beta blockers, non-selective**. Moderate Study
- **Omega-3-acid ethyl esters** might enhance the blood pressure-lowering effects of **beta blockers, selective**. Moderate Study

Omeprazole → see proton pump inhibitors
Ondansetron → see 5-HT3-receptor antagonists
Opicapone
- **Opicapone** increases the exposure to **levodopa**. Adjust dose. Moderate Study
- **Opicapone** is predicted to increase the exposure to **loperamide**. Avoid. Moderate Study
- **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **MAOIs, irreversible**. Avoid. Severe Theoretical
- **Opicapone** is predicted to increase the exposure to meglitinides **(repaglinide)**. Avoid. Moderate Study
- **Opicapone** is predicted to increase the risk of elevated blood pressure when given with **moclobemide**. Avoid. Severe Theoretical
- **Opicapone** is predicted to increase the exposure to **montelukast**. Avoid. Moderate Study
- **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. Moderate Study

- **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. Severe Theoretical
- **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Severe Theoretical

Opioids → see **TABLE 6** p. 1491 (bradycardia), **TABLE 13** p. 1493 (serotonin syndrome), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 11** p. 1492 (CNS depressant effects)

alfentanil · buprenorphine · codeine · diamorphine · dihydrocodeine · diphenoxylate · dipipanone · fentanyl · hydromorphone · meptazinol · methadone · morphine · oxycodone · pentazocine · pethidine · remifentanil · tapentadol · tramadol

- **Alcohol** causes rapid release of opioids **(hydromorphone, morphine)** from extended-release preparations. Avoid. Severe Study → Also see **TABLE 11** p. 1492
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** decrease the exposure to **methadone**. Monitor and adjust dose. Severe Study → Also see **TABLE 9** p. 1492
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. Moderate Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the concentration of **fentanyl**. Moderate Theoretical → Also see **TABLE 6** p. 1491
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **methadone**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 6** p. 1491
- Antiepileptics **(carbamazepine)** decrease the concentration of **tramadol**. Adjust dose. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. Moderate Theoretical → Also see **TABLE 11** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **methadone**. Monitor and adjust dose. Severe Study → Also see **TABLE 11** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. Moderate Study → Also see **TABLE 11** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study → Also see **TABLE 11** p. 1492
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **methadone**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **methadone**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **alfentanil**. Use with caution and adjust dose. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Severe Study
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **opioids**; concurrent use might increase the risk of developing intestinal obstruction. Severe Anecdotal → Also see **TABLE 11** p. 1492
- **Berotralstat** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Monitor and adjust dose. Moderate Study
- **Bictegravir** is predicted to increase the exposure to **methadone**. Moderate Theoretical
- **Brigatinib** potentially decreases the concentration of opioids **(alfentanil, fentanyl)**. Avoid. Moderate Theoretical → Also see **TABLE 6** p. 1491
- **Bupropion** is predicted to decrease the efficacy of **codeine**. Moderate Theoretical
- **Bupropion** is predicted to decrease the efficacy of **tramadol**. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **methadone**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 6** p. 1491
- **Cenobamate** is predicted to decrease the exposure to **alfentanil**. Adjust dose. Moderate Theoretical → Also see **TABLE 11** p. 1492
- **Ceritinib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Avoid. Severe Theoretical → Also see **TABLE 6** p. 1491
- **Cinacalcet** is predicted to decrease the efficacy of **codeine**. Moderate Theoretical
- **Cinacalcet** is predicted to decrease the efficacy of **tramadol**. Severe Study
- **Cobicistat** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to **methadone**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Crizotinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study → Also see **TABLE 6** p. 1491
- **Dabrafenib** decreases the exposure to **methadone**. Monitor and adjust dose. Severe Study
- **Tapentadol** is predicted to increase the risk of serotonin syndrome when given with **drugs that cause serotonin syndrome** (see **TABLE 13** p. 1493). Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** decrease the exposure to **methadone**. Monitor and adjust dose. Severe Study
- **Entrectinib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Mild Theoretical
- **Fedratinib** is predicted to increase the exposure to **alfentanil**. Monitor and adjust dose. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine)** increase the concentration of **alfentanil**. Use with caution and adjust dose. Severe Study
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **fentanyl**. Moderate Study
- **HIV-protease inhibitors** boosted with ritonavir are predicted to decrease the exposure to **methadone**. Moderate Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the concentration of **morphine**. Moderate Theoretical
- HIV-protease inhibitors **(ritonavir)** increase the risk of CNS toxicity when given with **pethidine**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Severe Study
- **Idelalisib** is predicted to increase the exposure to **methadone**. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Severe Study
- **Imatinib** is predicted to increase the exposure to **methadone**. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- Interferons **(peginterferon alfa)** are predicted to increase the exposure to **methadone**. Moderate Theoretical

Opioids (continued)

- **Larotrectinib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Use with caution and adjust dose. Mild Theoretical
- **Letermovir** is predicted to increase the exposure to **methadone**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Lorlatinib** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Avoid. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the concentration of **methadone**. Severe Theoretical → Also see **TABLE 9** p. 1492
- Macrolides **(erythromycin)** are predicted to increase the exposure to **methadone**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Macrolides **(clarithromycin)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- MAO-B inhibitors **(rasagiline)** are predicted to increase the risk of adverse effects when given with **pethidine**. Avoid and for 14 days after stopping **rasagiline**. Severe Theoretical → Also see **TABLE 13** p. 1493
- MAO-B inhibitors **(safinamide)** are predicted to increase the risk of adverse effects when given with **pethidine**. Avoid and for 1 week after stopping **safinamide**. Severe Theoretical → Also see **TABLE 13** p. 1493
- MAO-B inhibitors **(selegiline)** increase the risk of adverse effects when given with **pethidine**. Avoid. Severe Anecdotal → Also see **TABLE 13** p. 1493
- **Opioids** are predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid. Severe Study → Also see **TABLE 13** p. 1493
- **Opioids** potentially decrease the absorption of oral **mexiletine**. Moderate Study
- **Mifepristone** is predicted to increase the exposure to **alfentanil**. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. Moderate Theoretical
- **Mitotane** decreases the exposure to **methadone**. Monitor and adjust dose. Severe Study
- **Mitotane** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. Moderate Study
- **Nalmefene** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. Severe Theoretical
- **Naltrexone** is predicted to decrease the efficacy of **opioids**. Avoid except in an emergency situation—consult product literature. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **methadone**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **methadone**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine, fentanyl, oxycodone)**. Monitor and adjust dose. Moderate Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **buprenorphine**. Monitor and adjust dose. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **fentanyl**. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **methadone**. Adjust dose. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **morphine**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pethidine**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz)** moderately decrease the exposure to **buprenorphine**. Adjust dose. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** decrease the exposure to **methadone**. Monitor and adjust dose. Severe Study → Also see **TABLE 9** p. 1492
- **Olaparib** might alter the exposure to **alfentanil**. Moderate Theoretical
- Opioids **(buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids **(alfentanil)**. Severe Theoretical → Also see **TABLE 11** p. 1492
- Opioids **(pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids **(alfentanil, codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone)**. Severe Theoretical → Also see **TABLE 13** p. 1493 → Also see **TABLE 11** p. 1492
- Opioids **(buprenorphine)** are predicted to increase the risk of opiate withdrawal when given with opioids **(codeine, diamorphine, dihydrocodeine, dipipanone, fentanyl, hydromorphone, meptazinol, methadone, morphine, oxycodone, pentazocine, pethidine, remifentanil, tapentadol, tramadol)**. Severe Theoretical → Also see **TABLE 11** p. 1492
- Opioids **(pentazocine)** are predicted to increase the risk of opiate withdrawal when given with opioids **(pethidine, remifentanil, tapentadol, tramadol)**. Severe Theoretical → Also see **TABLE 13** p. 1493 → Also see **TABLE 11** p. 1492
- **Opioids** might increase the risk of adverse effects when given with **ozanimod**. Severe Theoretical → Also see **TABLE 6** p. 1491
- **Palbociclib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Adjust dose. Moderate Theoretical
- **Pemigatinib** might decrease the exposure to **methadone**. Moderate Theoretical
- **Pitolisant** is predicted to decrease the exposure to **morphine**. Mild Theoretical
- **Ribociclib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Use with caution and adjust dose. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **buprenorphine**. Monitor and adjust dose. Moderate Theoretical
- Rifamycins **(rifampicin)** decrease the exposure to **methadone**. Monitor and adjust dose. Severe Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **oxycodone**. Monitor and adjust dose. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study
- Rifamycins **(rifampicin)** decrease the exposure to opioids **(codeine, morphine)**. Moderate Study
- **Rucaparib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Monitor and adjust dose. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine)**. Avoid. Moderate Study
- **Sotorasib** is predicted to decrease the exposure to **alfentanil**. Avoid or adjust dose. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of **codeine**. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tramadol**. Severe Study → Also see **TABLE 13** p. 1493
- **St John's wort** decreases the exposure to **methadone**. Monitor and adjust dose. Severe Study → Also see **TABLE 13** p. 1493
- **St John's wort** moderately decreases the exposure to **oxycodone**. Adjust dose. Moderate Study
- **Terbinafine** is predicted to decrease the efficacy of **codeine**. Moderate Theoretical
- **Terbinafine** is predicted to decrease the efficacy of **tramadol**. Severe Study
- **Tucatinib** is predicted to increase the exposure to **alfentanil**. Avoid or adjust dose. Moderate Theoretical

Opium → see interactions of codeine and morphine under opioids

Orlistat

SEPARATION OF ADMINISTRATION Orlistat might affect the absorption of concurrently administered drugs—consider separating administration. Particular care should be taken with antiepileptics, antiretrovirals, and drugs that have a narrow therapeutic index.

Orphenadrine → see TABLE 10 p. 1492 (antimuscarinics)

- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **orphenadrine**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492

Oseltamivir

- **Leflunomide** is predicted to increase the exposure to **oseltamivir**. Moderate Theoretical
- **Nitisinone** is predicted to increase the exposure to **oseltamivir**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. Moderate Study

Osilodrostat → see TABLE 9 p. 1492 (QT-interval prolongation)

- **Osilodrostat** is predicted to increase the exposure to **agomelatine**. Moderate Study
- **Osilodrostat** is predicted to increase the exposure to **aminophylline**. Adjust dose. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to **anagrelide**. Moderate Theoretical → Also see TABLE 9 p. 1492
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **osilodrostat**. Moderate Theoretical → Also see TABLE 9 p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **osilodrostat**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **osilodrostat**. Moderate Theoretical → Also see TABLE 9 p. 1492
- **Osilodrostat** increases the concentration of antipsychotics, second generation **(clozapine)**. Monitor adverse effects and adjust dose. Severe Study
- **Osilodrostat** is predicted to increase the exposure to antipsychotics, second generation **(olanzapine)**. Adjust dose. Moderate Anecdotal
- **Cobicistat** is predicted to increase the exposure to **osilodrostat**. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to dopamine receptor agonists **(ropinirole)**. Adjust dose. Moderate Study
- **Osilodrostat** are predicted to increases the exposure to **erlotinib**. Monitor adverse effects and adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **osilodrostat**. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **osilodrostat**. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **osilodrostat**. Moderate Theoretical → Also see TABLE 9 p. 1492
- **Osilodrostat** slightly increases the exposure to MAO-B inhibitors **(rasagiline)**. Moderate Study
- **Osilodrostat** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **osilodrostat**. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to phenothiazines **(chlorpromazine)**. Moderate Theoretical → Also see TABLE 9 p. 1492
- **Osilodrostat** is predicted to increase the exposure to phosphodiesterase type-4 inhibitors **(roflumilast)**. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **osilodrostat**. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to SNRIs **(duloxetine)**. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Osilodrostat** increases the exposure to **tizanidine**. Avoid. Moderate Study → Also see TABLE 9 p. 1492
- **Osilodrostat** is predicted to increase the exposure to triptans **(zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical

Osimertinib → see TABLE 9 p. 1492 (QT-interval prolongation)

- **Osimertinib** is predicted to increase the exposure to **aliskiren**. Moderate Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study → Also see TABLE 9 p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Osimertinib** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Study
- **Osimertinib** is predicted to increase the exposure to **colchicine**. Moderate Study
- **Dabrafenib** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. Severe Study
- **Osimertinib** is predicted to increase the exposure to **digoxin**. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. Severe Study
- **Osimertinib** is predicted to increase the exposure to **everolimus**. Moderate Study
- **Osimertinib** is predicted to increase the exposure to factor XA inhibitors **(edoxaban, rivaroxaban)**. Moderate Study
- **Osimertinib** is predicted to increase the exposure to **loperamide**. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Modafinil** is predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. Severe Study → Also see TABLE 9 p. 1492
- NNRTIs **(etravirine)** are predicted to decrease the exposure to **osimertinib**. Use with caution or avoid. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Osimertinib** is predicted to increase the exposure to **sirolimus**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **osimertinib**. Avoid. Severe Study
- **Osimertinib** causes a small increase in the exposure to statins **(rosuvastatin)**. Severe Study
- **Osimertinib** is predicted to increase the exposure to **talazoparib**. Moderate Study
- **Osimertinib** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)**. Moderate Study
- **Osimertinib** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Moderate Study
- **Osimertinib** is predicted to increase the exposure to **topotecan**. Moderate Study

Ospemifene

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **ospemifene**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **ospemifene**. Moderate Study
- Antifungals, azoles **(fluconazole)** increase the exposure to **ospemifene**. Use with caution or avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. Moderate Study

Ospemifene (continued)

- **Cobicistat** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. Moderate Study
- **Combined hormonal contraceptives** potentially oppose the effects of **ospemifene**. Avoid. Severe Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **ospemifene**. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **ospemifene**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. Moderate Study
- **Hormone replacement therapy** potentially opposes the effects of **ospemifene**. Avoid. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ospemifene**. Avoid in poor CYP2C9 metabolisers. Moderate Study
- **Mitotane** is predicted to moderately decrease the exposure to **ospemifene**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ospemifene**. Moderate Study
- Rifamycins **(rifampicin)** are predicted to moderately decrease the exposure to **ospemifene**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **ospemifene**. Moderate Study

Oxaliplatin → see platinum compounds

Oxazepam → see benzodiazepines

Oxcarbazepine → see antiepileptics

Oxybuprocaine → see anaesthetics, local

Oxybutynin → see **TABLE 10** p. 1492 (antimuscarinics)

- **Oxybutynin** potentially increases the risk of overheating and dehydration when given with antiepileptics **(zonisamide)**. Avoid in children. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **oxybutynin**. Mild Study
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **oxybutynin**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 10** p. 1492
- **Cobicistat** is predicted to increase the exposure to **oxybutynin**. Mild Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **oxybutynin**. Mild Study
- **Idelalisib** is predicted to increase the exposure to **oxybutynin**. Mild Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **oxybutynin**. Mild Study

Oxycodone → see opioids

Oxymetholone

- **Oxymetholone** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Oxymetholone** increases the anticoagulant effect of **phenindione**. Severe Anecdotal

Oxytetracycline → see tetracyclines

Oxytocin

- **Misoprostol** can cause uterine contractions, as can **oxytocin**; concurrent use might increase the risk of developing this effect. Avoid and for 4 hours after stopping **misoprostol**. Severe Theoretical

Ozanimod → see **TABLE 6** p. 1491 (bradycardia), **TABLE 9** p. 1492 (QT-interval prolongation)

FOOD AND LIFESTYLE Tyramine-rich foods might increase the risk of hypertensive crisis when given ozanimod.

- **Ciclosporin** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. Moderate Study
- **Clopidogrel** is predicted to increase the exposure to the active metabolites of **ozanimod**. Moderate Study
- **Eltrombopag** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. Moderate Study
- Fibrates **(gemfibrozil)** are predicted to increase the exposure to the active metabolites of **ozanimod**. Moderate Study
- **Leflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. Moderate Study
- **Ozanimod** might increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. Severe Theoretical
- **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid and for 3 months after stopping **ozanimod**. Severe Theoretical
- **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAO-B inhibitors** and **MAO-B inhibitors** might decrease the exposure to the active metabolites of **ozanimod**. Avoid. Severe Theoretical → Also see **TABLE 6** p. 1491
- **Ozanimod** might increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. Severe Theoretical
- **Methylphenidate** is predicted to increase the risk of a hypertensive crisis when given with **ozanimod**. Severe Theoretical
- **Ozanimod** might increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. Severe Theoretical
- Monoclonal antibodies **(alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ozanimod**. Avoid. Severe Theoretical
- **Opioids** might increase the risk of adverse effects when given with **ozanimod**. Severe Theoretical → Also see **TABLE 6** p. 1491
- Rifamycins **(rifampicin)** moderately decrease the exposure to the active metabolites of **ozanimod**. Avoid. Moderate Study
- SNRIs **(duloxetine)** might increase the risk of adverse effects when given with **ozanimod**. Severe Theoretical
- **SSRIs** might increase the risk of adverse effects when given with **ozanimod**. Severe Theoretical
- **Sympathomimetics, vasoconstrictor** might increase the risk of a hypertensive crisis when given with **ozanimod**. Severe Theoretical
- **Teriflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. Moderate Study
- **Tricyclic antidepressants** might increase the risk of adverse effects when given with **ozanimod**. Severe Theoretical

Paclitaxel → see taxanes

Palbociclib → see **TABLE 15** p. 1493 (myelosuppression)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. Severe Study
- **Palbociclib** increases the exposure to benzodiazepines **(midazolam)**. Moderate Study
- **Palbociclib** is predicted to increase the exposure to **ciclosporin**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. Severe Study
- **Palbociclib** is predicted to increase the exposure to **ergotamine**. Adjust dose. Moderate Theoretical
- **Palbociclib** is predicted to increase the exposure to **everolimus**. Adjust dose. Moderate Theoretical
- **Grapefruit** juice is predicted to increase the exposure to **palbociclib**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. Severe Study
- **Idelalisib** is predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **palbociclib**. Avoid or adjust **palbociclib** dose, p. 1072. Severe Study
- **Mitotane** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Palbociclib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Adjust dose. Moderate Theoretical
- **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. Moderate Theoretical

- **St John’s wort** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Theoretical
- **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. Moderate Theoretical

Paliperidone → see antipsychotics, second generation

Palonosetron → see 5-HT3-receptor antagonists

Pamidronate → see bisphosphonates

Pancreatin

- **Pancreatin** is predicted to decrease the effects of **acarbose**. Avoid. Moderate Theoretical

Pancuronium → see neuromuscular blocking drugs, non-depolarising

Panitumumab → see monoclonal antibodies

Panobinostat → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 9** p. 1492 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid pomegranate, pomegranate juice, and star fruit as they are predicted to increase panobinostat exposure.

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. Moderate Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical
- **Panobinostat** is predicted to increase the exposure to **atomoxetine**. Monitor and adjust dose. Severe Theoretical
- **Panobinostat** is predicted to increase the exposure to beta blockers, selective **(metoprolol)**. Monitor and adjust dose. Moderate Theoretical
- **Panobinostat** is predicted to increase the exposure to beta blockers, selective **(nebivolol)**. Monitor and adjust dose. Mild Theoretical
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **panobinostat**. Adjust **panobinostat** dose; in hepatic impairment avoid, p. 1009. Moderate Study → Also see **TABLE 9** p. 1492
- **Mitotane** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- **St John’s wort** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1492

Pantoprazole → see proton pump inhibitors

Paracetamol → see **TABLE 1** p. 1490 (hepatotoxicity)

- **Alcohol** (in those who drink heavily) causes severe liver damage when given with **paracetamol**. Severe Study → Also see **TABLE 1** p. 1490
- **Paracetamol** is predicted to decrease the clearance of alkylating agents **(busulfan)**. Moderate Theoretical
- **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine)**. Use with caution or avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the exposure to **paracetamol**. Moderate Study → Also see **TABLE 1** p. 1490
- **Paracetamol** increases the anticoagulant effect of **coumarins**. Moderate Study
- **Paracetamol** is predicted to increase the risk of methaemoglobinaemia when given with **dapsone**. Severe Theoretical
- **Imatinib** increases the risk of hepatotoxicity when given with **paracetamol**. Severe Anecdotal
- **Paracetamol** has been reported to cause high anion gap metabolic acidosis when given with penicillins **(flucloxacillin)**. Severe Anecdotal → Also see **TABLE 1** p. 1490
- **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **paracetamol**. Mild Theoretical
- Rifamycins **(rifampicin)** decrease the exposure to **paracetamol**. Moderate Study

Paraldehyde → see antiepileptics

Parathyroid hormone

- **Bisphosphonates** are predicted to decrease the effects of **parathyroid hormone**. Avoid. Moderate Study

Parecoxib → see NSAIDs

Paricalcitol → see vitamin D substances

Paroxetine → see SSRIs

Pasireotide → see **TABLE 6** p. 1491 (bradycardia), **TABLE 9** p. 1492 (QT-interval prolongation)

- **Pasireotide** is predicted to decrease the absorption of oral **ciclosporin**. Adjust dose. Severe Theoretical

Patiromer

SEPARATION OF ADMINISTRATION Manufacturer advises take 3 hours before, or after, other drugs.

Pazopanib → see **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 4** p. 1490 (antiplatelet effects)

- Oral **antacids** are predicted to decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **pazopanib**. Moderate Study → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pazopanib**. Moderate Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. Moderate Study → Also see **TABLE 9** p. 1492
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **pazopanib**. Moderate Study
- Oral calcium salts **(calcium carbonate)** -containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. Moderate Study

Pazopanib (continued)

- **Pazopanib** is predicted to increase the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **pazopanib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Dabrafenib** is predicted to decrease the exposure to **pazopanib**. Severe Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **pazopanib**. Severe Study
- **Grapefruit** juice is predicted to increase the exposure to **pazopanib**. Avoid. Severe Theoretical
- **H_2 receptor antagonists** are predicted to decrease the exposure to **pazopanib**. **H_2 receptor antagonists** should be taken 10 hours before or 2 hours after **pazopanib**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. Moderate Study
- **Imatinib** is predicted to increase the exposure to **pazopanib**. Moderate Study → Also see **TABLE 4** p. 1490
- **Lapatinib** increases the exposure to **pazopanib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Letermovir** is predicted to increase the exposure to **pazopanib**. Moderate Study
- **Pazopanib** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **pazopanib**. Avoid or adjust **pazopanib** dose, p. 1073. Moderate Study → Also see **TABLE 9** p. 1492
- Macrolides **(erythromycin)** are predicted to increase the exposure to **pazopanib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Mitotane** is predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **pazopanib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **pazopanib**. Moderate Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **pazopanib**. Severe Study → Also see **TABLE 9** p. 1492
- **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical
- **Pazopanib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- Oral **sodium bicarbonate** -containing antacids might decrease the absorption of oral **pazopanib**. **Pazopanib** should be taken 1 hour before or 2 hours after antacids. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **pazopanib**. Severe Study
- **Pazopanib** might affect the exposure to statins **(atorvastatin, pravastatin, rosuvastatin)**. Moderate Theoretical
- **Pazopanib** might cause increased ALT concentrations when given with statins **(simvastatin)**. Moderate Study

Pegaspargase → see **TABLE 1** p. 1490 (hepatotoxicity), **TABLE 15** p. 1493 (myelosuppression)

- **Pegaspargase** is predicted to increase the risk of hepatotoxicity when given with **imatinib**. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Pegaspargase** affects the efficacy of **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- **Pegaspargase** potentially increases the risk of neurotoxicity when given with vinca alkaloids **(vincristine)**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. Severe Anecdotal → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493

Peginterferon alfa → see interferons

Pembrolizumab → see monoclonal antibodies

Pemetrexed → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 2** p. 1490 (nephrotoxicity)

- Antimalarials **(pyrimethamine)** are predicted to increase the risk of adverse effects when given with **pemetrexed**. Severe Theoretical
- **Aspirin** (high-dose) potentially increases the exposure to **pemetrexed**. Use with caution or avoid. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **pemetrexed**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **NSAIDs** are predicted to increase the exposure to **pemetrexed**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 2** p. 1490

Pemigatinib

- **Pemigatinib** might increase the exposure to the active metabolite of alkylating agents **(cyclophosphamide)**. Moderate Theoretical
- **Pemigatinib** might decrease the exposure to alkylating agents **(ifosfamide)**. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **pemigatinib**. Avoid. Severe Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **pemigatinib**. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **pemigatinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pemigatinib**. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **pemigatinib**. Severe Study
- **Cobicistat** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. Severe Study
- **Pemigatinib** might increase the exposure to **colchicine**. Separate administration by at least 6 hours. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **pemigatinib**. Severe Study
- **Dabrafenib** is predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. Severe Study
- **Pemigatinib** might increase the exposure to **digoxin**. Separate administration by at least 6 hours. Moderate Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. Severe Study
- **Pemigatinib** might increase the exposure to **everolimus**. Separate administration by at least 6 hours. Moderate Theoretical
- **Pemigatinib** might increase the exposure to factor XA inhibitors **(edoxaban, rivaroxaban)**. Separate administration by at least 6 hours. Moderate Theoretical
- **Grapefruit** and grapefruit juice is predicted to increase the exposure to **pemigatinib**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. Severe Study
- **Idelalisib** is predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. Severe Study
- **Imatinib** is predicted to increase the exposure to **pemigatinib**. Severe Study
- **Letermovir** is predicted to increase the exposure to **pemigatinib**. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **pemigatinib**. Avoid or adjust **pemigatinib** dose, p. 1074. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **pemigatinib**. Severe Study
- **Mitotane** is predicted to decrease the exposure to **pemigatinib**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **pemigatinib**. Severe Study
- **Nilotinib** is predicted to increase the exposure to **pemigatinib**. Severe Study

- NNRTIs **(efavirenz)** are predicted to decrease the exposure to **pemigatinib** and **pemigatinib** might decrease the exposure to NNRTIs **(efavirenz)**. Avoid or monitor. Severe Study
- NNRTIs **(nevirapine)** are predicted to decrease the exposure to **pemigatinib**. Avoid or monitor. Severe Study
- **Pemigatinib** might decrease the exposure to opioids **(methadone)**. Moderate Theoretical
- **Pemigatinib** is predicted to increase the risk of hyperphosphataemia when given with **phosphate**. Moderate Theoretical
- **Proton pump inhibitors** have been reported to decrease the exposure to **pemigatinib**. Avoid. Severe Anecdotal
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **pemigatinib**. Avoid. Severe Study
- **Pemigatinib** might increase the exposure to **sirolimus**. Separate administration by at least 6 hours. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **pemigatinib**. Avoid. Severe Study
- **Pemigatinib** might increase the exposure to thrombin inhibitors **(dabigatran)**. Separate administration by at least 6 hours. Moderate Theoretical

Penicillamine → see **TABLE 2** p. 1490 (nephrotoxicity)

- Oral **antacids** decrease the absorption of oral **penicillamine**. Separate administration by 2 hours. Mild Study
- Antimalarials **(chloroquine)** are predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. Severe Theoretical
- **Penicillamine** potentially decreases the concentration of **digoxin**. Separate administration by 2 hours. Severe Anecdotal
- **Hydroxychloroquine** is predicted to increase the risk of haematological toxicity when given with **penicillamine**. Avoid. Severe Theoretical
- Oral **iron** is predicted to decrease the absorption of oral **penicillamine**. Separate administration by at least 2 hours. Mild Study
- **Zinc** is predicted to decrease the absorption of **penicillamine**. Mild Theoretical

Penicillins → see **TABLE 1** p. 1490 (hepatotoxicity)

amoxicillin · ampicillin · benzathine benzylpenicillin · benzylpenicillin · flucloxacillin · phenoxymethylpenicillin · piperacillin · pivmecillinam · temocillin

- **Allopurinol** increases the risk of skin rash when given with penicillins **(amoxicillin, ampicillin)**. Moderate Study
- Antiepileptics **(valproate)** increase the risk of adverse effects when given with **pivmecillinam**. Avoid. Severe Anecdotal
- **Penicillins** potentially alter the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Anecdotal
- **Leflunomide** is predicted to increase the exposure to **benzylpenicillin**. Moderate Theoretical
- **Penicillins** are predicted to increase the risk of toxicity when given with **methotrexate**. Severe Anecdotal → Also see **TABLE 1** p. 1490
- **Piperacillin** increases the effects of **neuromuscular blocking drugs, non-depolarising**. Moderate Study
- **Nitisinone** is predicted to increase the exposure to **benzylpenicillin**. Moderate Study
- **Paracetamol** has been reported to cause high anion gap metabolic acidosis when given with **flucloxacillin**. Severe Anecdotal → Also see **TABLE 1** p. 1490
- **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Piperacillin** increases the effects of **suxamethonium**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **benzylpenicillin**. Moderate Study

Pentamidine → see **TABLE 2** p. 1490 (nephrotoxicity), **TABLE 9** p. 1492 (QT-interval prolongation)

- **Foscarnet** increases the risk of hypocalcaemia when given with **pentamidine**. Severe Anecdotal → Also see **TABLE 2** p. 1490

Pentazocine → see opioids

Pentostatin → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 5** p. 1491 (thromboembolism)

- Alkylating agents **(cyclophosphamide)** (high-dose) increase the risk of toxicity when given with **pentostatin**. Avoid. Severe Anecdotal → Also see **TABLE 15** p. 1493 → Also see **TABLE 5** p. 1491
- **Fludarabine** increases the risk of pulmonary toxicity when given with **pentostatin**. Avoid. Severe Study → Also see **TABLE 15** p. 1493

Pentoxifylline

- **Pentoxifylline** is predicted to increase the concentration of **aminophylline**. Use with caution or avoid. Severe Theoretical
- Quinolones **(ciprofloxacin)** very slightly increase the exposure to **pentoxifylline**. Moderate Study
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **pentoxifylline**. Moderate Theoretical
- **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. Severe Study

Peppermint

- **Peppermint** oil is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical

Perampanel → see antiepileptics

Pericyazine → see phenothiazines

Perindopril → see ACE inhibitors

Pertuzumab → see monoclonal antibodies

Pethidine → see opioids

Phenazone → see NSAIDs

Phenelzine → see MAOIs, irreversible

Phenindione → see **TABLE 3** p. 1490 (anticoagulant effects)

FOOD AND LIFESTYLE The effects of phenindione can be reduced or abolished by vitamin K, including that found in health foods, food supplements, enteral feeds, or large amounts of some green vegetables or green tea. Major changes in diet (especially involving salads and vegetables) and in alcohol consumption can affect anticoagulant control.

- Antiarrhythmics **(propafenone)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. Moderate Theoretical
- Antifungals, azoles **(miconazole)** greatly increase the anticoagulant effect of **phenindione**. Severe Theoretical
- Cephalosporins **(cefazolin, ceftriaxone)** potentially increase the risk of bleeding events when given with **phenindione**. Severe Anecdotal
- **Ceritinib** is predicted to increase the exposure to **phenindione**. Severe Theoretical
- **Corticosteroids** are predicted to increase the effects of **phenindione**. Moderate Anecdotal
- **Crizotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **phenindione**. Moderate Study
- **Disulfiram** is predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical
- **Enteral feeds** (vitamin-K containing) potentially decrease the effects of **phenindione**. Severe Theoretical
- **Erlotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Fibrates** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. Severe Study
- **Gefitinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **phenindione**. Severe Anecdotal
- **Imatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Lapatinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Nandrolone** is predicted to increase the anticoagulant effect of **phenindione**. Monitor and adjust dose. Severe Theoretical
- **Nilotinib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Oxymetholone** increases the anticoagulant effect of **phenindione**. Severe Anecdotal
- **Paracetamol** is predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical
- **Pazopanib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical

Phenindione (continued)

- **Penicillins** are predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Selumetinib** might increase the risk of bleeding when given with **phenindione**. Severe Theoretical
- **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- Statins **(rosuvastatin)** are predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. Severe Theoretical
- **Tetracyclines** are predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical
- **Tigecycline** is predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical
- **Tofacitinib** is predicted to increase the risk of bleeding when given with **phenindione**. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **phenindione**. Moderate Study

Phenobarbital → see antiepileptics

Phenothiazines → see **TABLE 8** p. 1491 (hypotension), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 11** p. 1492 (CNS depressant effects), **TABLE 10** p. 1492 (antimuscarinics)

chlorpromazine · levomepromazine · pericyazine · prochlorperazine · promazine · trifluoperazine

FOOD AND LIFESTYLE **Chlorpromazine** dose adjustment might be necessary if smoking started or stopped during treatment.

- **Phenothiazines** are predicted to decrease the effects of **amfetamines** and **amfetamines** are predicted to decrease the effects of **phenothiazines**. Moderate Study
- Oral **antacids** decrease the absorption of oral **phenothiazines**. Moderate Anecdotal
- **Chlorpromazine** decreases the concentration of antiepileptics **(phenobarbital, primidone)** and antiepileptics **(phenobarbital, primidone)** decrease the concentration of **chlorpromazine**. Moderate Study → Also see **TABLE 11** p. 1492
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **phenothiazines**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492 → Also see **TABLE 10** p. 1492
- **Combined hormonal contraceptives** is predicted to increase the exposure to **chlorpromazine**. Moderate Theoretical
- **Chlorpromazine** is predicted to increase the risk of hyponatraemia when given with **desmopressin**. Severe Theoretical
- **Phenothiazines** are predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 9** p. 1492 → Also see **TABLE 10** p. 1492
- **Phenothiazines** decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Study → Also see **TABLE 8** p. 1491
- **Phenothiazines** potentially increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1492
- **MAOIs, irreversible** are predicted to increase the risk of neuroleptic malignant syndrome when given with **phenothiazines**. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Chlorpromazine** decreases the effects of **metyrapone**. Avoid. Moderate Theoretical
- **Mexiletine** is predicted to increase the exposure to **chlorpromazine**. Moderate Theoretical
- **Moclobemide** increases the risk of adverse effects when given with **levomepromazine**. Moderate Study
- **Osilodrostat** is predicted to increase the exposure to **chlorpromazine**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **chlorpromazine**. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **chlorpromazine**. Moderate Theoretical
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **chlorpromazine**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **chlorpromazine**. Moderate Theoretical → Also see **TABLE 9** p. 1492

Phenoxymethylpenicillin → see penicillins

Phenylephrine → see sympathomimetics, vasoconstrictor

Phenytoin → see antiepileptics

Pholcodine

- **Pholcodine** is predicted to increase the risk of CNS excitation or depression when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical

Phosphate

- **Pemigatinib** is predicted to increase the risk of hyperphosphataemia when given with **phosphate**. Moderate Theoretical

Phosphodiesterase type-4 inhibitors

apremilast · roflumilast

- **Aminophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** moderately decrease the exposure to **apremilast**. Avoid. Severe Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** moderately decrease the exposure to **apremilast**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- **Combined hormonal contraceptives** is predicted to increase the exposure to **roflumilast**. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **roflumilast**. Moderate Study
- **Mexiletine** is predicted to increase the exposure to **roflumilast**. Moderate Theoretical
- **Mitotane** moderately decreases the exposure to **apremilast**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- **Osilodrostat** is predicted to increase the exposure to **roflumilast**. Moderate Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **roflumilast**. Moderate Theoretical
- Rifamycins **(rifampicin)** moderately decrease the exposure to **apremilast**. Avoid. Severe Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **roflumilast**. Avoid. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **roflumilast**. Moderate Theoretical
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **roflumilast**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **apremilast**. Avoid. Severe Theoretical
- **Theophylline** is predicted to slightly increase the exposure to **roflumilast**. Avoid. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **roflumilast**. Moderate Theoretical

Phosphodiesterase type-5 inhibitors → see **TABLE 8** p. 1491 (hypotension), **TABLE 9** p. 1492 (QT-interval prolongation)

avanafil · sildenafil · tadalafil · vardenafil

- **Alpha blockers** cause significant hypotensive effects when given with **phosphodiesterase type-5 inhibitors**. Patient should be stabilised on first drug then second drug should be added at the lowest recommended dose. Severe Study → Also see **TABLE 8** p. 1491
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. Moderate Theoretical

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **tadalafil**. Severe Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tadalafil**. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. Severe Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. Severe Study
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **sildenafil**. Use with caution and adjust dose. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. Moderate Theoretical → Also see **TABLE 8** p. 1491
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study → Also see **TABLE 8** p. 1491
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **tadalafil**. Severe Theoretical → Also see **TABLE 8** p. 1491
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Cenobamate** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, sildenafil, vardenafil)**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. Severe Study
- **Cobicistat** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study → Also see **TABLE 9** p. 1492
- **Crizotinib** is predicted to increase the exposure to **tadalafil**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1492
- Endothelin receptor antagonists **(bosentan)** decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Study
- **Grapefruit** juice is predicted to increase the exposure to **phosphodiesterase type-5 inhibitors**. Use with caution or avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. Severe Study
- **Idelalisib** is predicted to increase the exposure to **tadalafil**. Use with caution or avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study
- **Imatinib** is predicted to increase the exposure to **tadalafil**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study
- **Letermovir** is predicted to increase the exposure to **tadalafil**. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **sildenafil**. Avoid potent CYP3A4 inhibitors or adjust **sildenafil** dose, p. 879. Severe Study → Also see **TABLE 9** p. 1492
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **tadalafil**. Use with caution or avoid. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study → Also see **TABLE 9** p. 1492
- Macrolides **(erythromycin)** are predicted to increase the exposure to **tadalafil**. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1492
- Macrolides **(clarithromycin)** are predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **sildenafil**. Monitor or

Phosphodiesterase type-5 inhibitors (continued)
adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study

- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **tadalafil**. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical
- **Nicorandil** is predicted to increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Nilotinib** is predicted to increase the exposure to **avanafil**. Adjust **avanafil** dose, p. 878. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **sildenafil**. Monitor or adjust **sildenafil** dose with moderate CYP3A4 inhibitors, p. 879. Moderate Study → Also see **TABLE 9** p. 1492
- **Nilotinib** is predicted to increase the exposure to **tadalafil**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **vardenafil**. Adjust dose. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **sildenafil**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **tadalafil**. Adjust dose—consult product literature. Severe Theoretical
- **Nitrates** potentially increase the risk of hypotension when given with **phosphodiesterase type-5 inhibitors**. Avoid. Severe Study → Also see **TABLE 8** p. 1491
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- NNRTIs **(etravirine)** moderately decrease the exposure to **phosphodiesterase type-5 inhibitors**. Adjust dose. Moderate Study
- **Ribociclib** is predicted to increase the exposure to **sildenafil**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. Moderate Theoretical → Also see **TABLE 8** p. 1491
- **St John's wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid or adjust dose. Moderate Theoretical

Pibrentasvir

- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **aliskiren**. Moderate Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** potentially increase the exposure to **pibrentasvir**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- Antiepileptics **(eslicarbazepine, oxcarbazepine)** potentially decrease the exposure to **pibrentasvir**. Avoid. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Study
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **colchicine**. Moderate Study
- **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **pibrentasvir**. Avoid. Severe Study
- **Crizotinib** potentially decreases the exposure to **pibrentasvir**. Avoid. Severe Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Pibrentasvir** with glecaprevir increases the exposure to **digoxin**. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **everolimus**. Moderate Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to factor XA inhibitors **(edoxaban)**. Moderate Study
- HIV-protease inhibitors **(atazanavir, lopinavir)** boosted with ritonavir increase the exposure to **pibrentasvir**. Avoid. Severe Study
- HIV-protease inhibitors **(ritonavir)** potentially increase the exposure to **pibrentasvir**. Severe Theoretical
- **Lapatinib** is predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **loperamide**. Moderate Study
- **Lumacaftor** potentially decreases the exposure to **pibrentasvir**. Avoid. Severe Theoretical
- **Macrolides** are predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical
- **Mitotane** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pibrentasvir**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **sirolimus**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Pibrentasvir** with glecaprevir markedly increases the exposure to statins **(atorvastatin)**. Avoid. Severe Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to statins **(fluvastatin)**. Moderate Theoretical
- **Pibrentasvir** with glecaprevir moderately increases the exposure to statins **(pravastatin)**. Use with caution and adjust **pravastatin** dose. Moderate Study
- **Pibrentasvir** with glecaprevir moderately increases the exposure to statins **(rosuvastatin)**. Use with caution and adjust **rosuvastatin** dose, p. 221. Moderate Study
- **Pibrentasvir** with glecaprevir moderately increases the exposure to statins **(simvastatin)**. Avoid. Moderate Study
- **Pibrentasvir** with glecaprevir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. Mild Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to taxanes **(paclitaxel)**. Moderate Study
- **Pibrentasvir** with glecaprevir increases the exposure to thrombin inhibitors **(dabigatran)**. Avoid. Moderate Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **topotecan**. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical

Pilocarpine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

Pimecrolimus
- **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **pimecrolimus**. Moderate Study
- **Pimecrolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical

Pimozide → see **TABLE 8** p. 1491 (hypotension), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 11** p. 1492 (CNS depressant effects), **TABLE 10** p. 1492 (antimuscarinics)
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(miconazole)** are predicted to increase the exposure to **pimozide**. Avoid. Moderate Theoretical
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **pimozide**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492 → Also see **TABLE 10** p. 1492
- **Berotralstat** is predicted to increase the exposure to **pimozide**. Avoid. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Ceritinib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Cobicistat** is predicted to increase the exposure to **pimozide**. Avoid. Severe Study
- **Crizotinib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Pimozide** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 9** p. 1492 → Also see **TABLE 10** p. 1492
- **Grapefruit** juice increases the exposure to **pimozide**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **pimozide**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- **Larotrectinib** is predicted to increase the exposure to **pimozide**. Use with caution and adjust dose. Mild Theoretical
- **Letermovir** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- **Pimozide** decreases the effects of **levodopa**. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Lorlatinib** is predicted to decrease the exposure to **pimozide**. Avoid. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- Macrolides **(erythromycin)** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **pimozide**. Avoid. Severe Theoretical
- **Olaparib** might alter the exposure to **pimozide**. Moderate Theoretical
- **Palbociclib** is predicted to increase the exposure to **pimozide**. Adjust dose. Moderate Theoretical
- **Panobinostat** is predicted to increase the exposure to **pimozide**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. Severe Theoretical
- **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. Moderate Study

Pindolol → see beta blockers, non-selective

Pioglitazone → see **TABLE 14** p. 1493 (antidiabetic drugs)
- **Pioglitazone** potentially decreases the exposure to antifungals, azoles **(isavuconazole)**. Use with caution or avoid. Moderate Theoretical
- **Clopidogrel** increases the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. Severe Study
- **Fenfluramine** might decrease blood glucose concentrations when given with **pioglitazone**. Moderate Theoretical
- Fibrates **(gemfibrozil)** increase the exposure to **pioglitazone**. Monitor blood glucose and adjust dose. Severe Study
- Iron chelators **(deferasirox)** are predicted to increase the exposure to **pioglitazone**. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **pioglitazone**. Moderate Study
- **Mifepristone** is predicted to increase the exposure to **pioglitazone**. Moderate Theoretical
- **Opicapone** is predicted to increase the exposure to **pioglitazone**. Avoid. Moderate Study
- Rifamycins **(rifampicin)** moderately decrease the exposure to **pioglitazone**. Monitor and adjust dose. Moderate Study
- **St John's wort** slightly decreases the exposure to **pioglitazone**. Mild Study
- **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. Moderate Study

Piperacillin → see penicillins

Piperaquine → see antimalarials

Pirfenidone

> FOOD AND LIFESTYLE Smoking increases pirfenidone clearance; patients should be encouraged to stop smoking before and during treatment with pirfenidone.

- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Axitinib** is predicted to increase the exposure to **pirfenidone**. Moderate Theoretical
- **Combined hormonal contraceptives** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Leflunomide** is predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Mexiletine** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- **Osilodrostat** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **pirfenidone**. Avoid. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- SSRIs **(fluvoxamine)** are predicted to moderately increase the exposure to **pirfenidone**. Avoid. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study

Piroxicam → see NSAIDs

Pitolisant
- **Pitolisant** is predicted to decrease the exposure to **aliskiren**. Mild Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to antihistamines, non-sedating **(fexofenadine)**. Mild Theoretical

Pitolisant (continued)

- **Antihistamines, sedating** are predicted to decrease the efficacy of **pitolisant**. Moderate Theoretical
- **Pitolisant** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Theoretical
- **Bupropion** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **ciclosporin**. Avoid. Severe Theoretical
- **Cinacalcet** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **colchicine**. Mild Theoretical
- **Pitolisant** is predicted to decrease the efficacy of **combined hormonal contraceptives**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to coumarins **(warfarin)**. Mild Theoretical
- **Pitolisant** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **dasatinib**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **digoxin**. Mild Theoretical
- **Pitolisant** is predicted to decrease the exposure to **everolimus**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to factor XA inhibitors **(edoxaban)**. Mild Theoretical
- **Pitolisant** is predicted to decrease the exposure to **irinotecan**. Mild Theoretical
- **Pitolisant** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **loperamide**. Mild Theoretical
- **Pitolisant** is predicted to decrease the exposure to meglitinides **(repaglinide)**. Mild Theoretical
- **Pitolisant** is predicted to increase the exposure to **metformin**. Mild Theoretical
- **Mianserin** is predicted to decrease the efficacy of **pitolisant**. Moderate Theoretical
- **Mirtazapine** is predicted to decrease the efficacy of **pitolisant**. Moderate Theoretical
- **Mitotane** is predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to NNRTIs **(efavirenz)**. Mild Theoretical
- **Pitolisant** is predicted to decrease the exposure to opioids **(morphine)**. Mild Theoretical
- **Pitolisant** is predicted to decrease the exposure to **paracetamol**. Mild Theoretical
- **Pitolisant** is predicted to decrease the exposure to **pimozide**. Avoid. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. Severe Theoretical
- SNRIs **(duloxetine)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- SNRIs **(venlafaxine)** are predicted to increase the exposure to **pitolisant**. Use with caution and adjust dose. Mild Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. Moderate Theoretical
- **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to taxanes **(docetaxel)**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to taxanes **(paclitaxel)**. Mild Theoretical
- **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. Severe Theoretical
- **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to thrombin inhibitors **(dabigatran)**. Mild Theoretical
- **Pitolisant** is predicted to decrease the exposure to **topotecan**. Mild Theoretical
- **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. Mild Theoretical

Pivmecillinam → see penicillins

Pixantrone → see anthracyclines

Pizotifen → see antihistamines, sedating

Platinum compounds → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 2** p. 1490 (nephrotoxicity), **TABLE 19** p. 1494 (ototoxicity), **TABLE 12** p. 1493 (peripheral neuropathy)

carboplatin · cisplatin · oxaliplatin

- **Cisplatin** increases the risk of pulmonary toxicity when given with **bleomycin**. Severe Study → Also see **TABLE 15** p. 1493
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **platinum compounds**. UKHSA advises avoid (refer to Green Book). Severe Theoretical

Polatuzumab vedotin → see monoclonal antibodies

Polymyxin b → see **TABLE 2** p. 1490 (nephrotoxicity), **TABLE 20** p. 1494 (neuromuscular blocking effects)

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **polymyxin B**, the possibility of interactions should be borne in mind.

Polystyrene sulfonate

SEPARATION OF ADMINISTRATION Manufacturers advise take other drugs at least 3 hours before or after calcium- or sodium-polystyrene sulfonate; a 6-hour separation should be considered in gastroparesis.

- Oral **antacids** increase the risk of metabolic alkalosis when given with oral **polystyrene sulfonate**. Severe Anecdotal

Pomalidomide → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 5** p. 1491 (thromboembolism)

- **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Avoid. Severe Theoretical
- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **pomalidomide**. Severe Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1035. Moderate Theoretical
- SSRIs **(fluvoxamine)** moderately increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1035. Moderate Study

Ponatinib → see **TABLE 4** p. 1490 (antiplatelet effects)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ponatinib**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ponatinib**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ponatinib**. Moderate Study
- **Cobicistat** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. Moderate Study
- **Ponatinib** might affect the effects of **combined hormonal contraceptives**. Avoid or use additional contraceptive precautions. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **ponatinib**. Moderate Study

- **Dabrafenib** is predicted to decrease the exposure to **ponatinib**. Severe Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **ponatinib**. Severe Study
- **Grapefruit** juice is predicted to increase the exposure to **ponatinib**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. Moderate Study
- **Idelalisib** is predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. Moderate Study
- **Imatinib** is predicted to increase the exposure to **ponatinib**. Moderate Study → Also see **TABLE 4** p. 1490
- **Letermovir** is predicted to increase the exposure to **ponatinib**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to slightly increase the exposure to **ponatinib**. Monitor and adjust **ponatinib** dose, p. 1075. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ponatinib**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ponatinib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **ponatinib**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ponatinib**. Severe Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **ponatinib**. Avoid. Severe Theoretical

Ponesimod → see **TABLE 6** p. 1491 (bradycardia), **TABLE 9** p. 1492 (QT-interval prolongation)

- Anti-androgens **(apalutamide, enzalutamide)** might decrease the exposure to **ponesimod**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** might decrease the exposure to **ponesimod**. Moderate Theoretical
- **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **ponesimod**. Avoid and for 1 week after stopping **ponesimod**. Severe Theoretical
- **Mitotane** might decrease the exposure to **ponesimod**. Moderate Theoretical
- Monoclonal antibodies **(alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **ponesimod**. Severe Theoretical
- Rifamycins **(rifampicin)** might decrease the exposure to **ponesimod**. Moderate Theoretical

Posaconazole → see antifungals, azoles

Potassium aminobenzoate → see **TABLE 16** p. 1494 (increased serum potassium)

- **Potassium aminobenzoate** increases the concentration of **methotrexate**. Moderate Theoretical
- **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides**. Avoid. Severe Theoretical

Potassium canrenoate → see **TABLE 16** p. 1494 (increased serum potassium)

Potassium chloride → see **TABLE 16** p. 1494 (increased serum potassium)

Potassium citrate

- **Potassium citrate** is predicted to decrease the efficacy of **methenamine**. Avoid. Moderate Theoretical
- **Potassium citrate** increases the risk of adverse effects when given with **sucralfate**. Avoid. Moderate Theoretical

Potassium-sparing diuretics → see **TABLE 18** p. 1494 (hyponatraemia), **TABLE 16** p. 1494 (increased serum potassium)

amiloride · triamterene

- **Triamterene** potentially increases the clearance of **lithium**. Moderate Study

Pramipexole → see dopamine receptor agonists

Prasugrel → see **TABLE 4** p. 1490 (antiplatelet effects)

- **Selumetinib** might increase the risk of bleeding when given with **prasugrel**. Severe Theoretical

Pravastatin → see statins

Praziquantel

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **praziquantel**. Mild Study
- Antimalarials **(chloroquine)** moderately decrease the exposure to **praziquantel**. Use with caution and adjust dose. Moderate Study
- **Cobicistat** is predicted to moderately increase the exposure to **praziquantel**. Mild Study
- Corticosteroids **(dexamethasone)** decrease the exposure to **praziquantel**. Moderate Study
- **Grapefruit** juice is predicted to increase the exposure to **praziquantel**. Moderate Study
- H_2 receptor antagonists **(cimetidine)** moderately increase the exposure to **praziquantel**. Moderate Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **praziquantel**. Mild Study
- **Idelalisib** is predicted to moderately increase the exposure to **praziquantel**. Mild Study
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **praziquantel**. Mild Study
- **Mitotane** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- Rifamycins **(rifampicin)** are predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study

Prazosin → see alpha blockers

Prednisolone → see corticosteroids

Pregabalin → see antiepileptics

Pridinol → see **TABLE 10** p. 1492 (antimuscarinics)

- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **pridinol**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 10** p. 1492

Prilocaine → see anaesthetics, local

Primaquine → see antimalarials

Primidone → see antiepileptics

Procarbazine → see **TABLE 15** p. 1493 (myelosuppression)

FOOD AND LIFESTYLE Procarbazine is a mild monoamine-oxidase inhibitor and might rarely interact with tyramine-rich foods (such as mature cheese, salami, pickled herring, *Bovril*®, *Oxo*®, *Marmite*® or any similar meat or yeast extract or fermented soya bean extract, and some beers, lagers or wines).

- **Alcohol** potentially causes a disulfiram-like reaction when given with **procarbazine**. Moderate Anecdotal
- Antiepileptics **(carbamazepine, phenobarbital, phenytoin, primidone)** are predicted to increase the risk of hypersensitivity reactions when given with **procarbazine**. Severe Anecdotal
- Antiepileptics **(fosphenytoin)** are predicted to increase the risk of hypersensitivity when given with **procarbazine**. Severe Anecdotal
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **procarbazine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical

Prochlorperazine → see phenothiazines

Procyclidine → see **TABLE 10** p. 1492 (antimuscarinics)

- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **procyclidine**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 10** p. 1492
- SSRIs **(paroxetine)** slightly increase the exposure to **procyclidine**. Monitor and adjust dose. Moderate Study

Progestogen-only contraceptives

- **Lumacaftor** might decrease the efficacy of oral **progestogen-only contraceptives**. Use additional contraceptive precautions. Severe Theoretical

Proguanil → see antimalarials
Promazine → see phenothiazines
Promethazine → see antihistamines, sedating
Propafenone → see antiarrhythmics
Propantheline → see **TABLE 10** p. 1492 (antimuscarinics)

- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **propantheline**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 10** p. 1492

Propiverine → see **TABLE 10** p. 1492 (antimuscarinics)

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. Moderate Theoretical
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **propiverine**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 10** p. 1492
- **Carbimazole** given with a potent CYP3A4 inhibitor is predicted to increase the exposure to **propiverine**. Adjust starting dose. Moderate Theoretical
- **Cobicistat** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. Moderate Theoretical
- **HIV-protease inhibitors** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. Moderate Theoretical
- **Idelalisib** given with carbimazole is predicted to increase the exposure to **propiverine**. Adjust starting dose. Moderate Theoretical
- **Propiverine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(clarithromycin)** given with carbimazole are predicted to increase the exposure to **propiverine**. Adjust starting dose. Moderate Theoretical

Propofol → see **TABLE 6** p. 1491 (bradycardia), **TABLE 8** p. 1491 (hypotension), **TABLE 11** p. 1492 (CNS depressant effects)

- Antiepileptics **(valproate)** potentially increase the concentration of **propofol**. Adjust dose. Severe Theoretical
- **Propofol** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical

Propranolol → see beta blockers, non-selective
Propylthiouracil

- **Propylthiouracil** is predicted to decrease the effects of **metyrapone**. Avoid. Moderate Theoretical

Proton pump inhibitors

esomeprazole • lansoprazole • omeprazole • pantoprazole • rabeprazole

- **Proton pump inhibitors** are predicted to decrease the exposure to **acalabrutinib**. Avoid. Moderate Study
- **Pantoprazole** is predicted to increase the exposure to **alpelisib**. Moderate Theoretical
- Anti-androgens **(apalutamide)** markedly decrease the exposure to **omeprazole**. Avoid or monitor. Moderate Study
- Anti-androgens **(apalutamide)** are predicted to decrease the exposure to proton pump inhibitors **(lansoprazole, rabeprazole)**. Avoid or monitor. Mild Study
- Antifungals, azoles **(voriconazole)** increase the exposure to proton pump inhibitors **(esomeprazole, omeprazole)**. Adjust dose. Moderate Study
- **Proton pump inhibitors** decrease the absorption of antifungals, azoles **(itraconazole)**. Administer itraconazole capsules with an acidic beverage. Moderate Study
- **Proton pump inhibitors** decrease the absorption of antifungals, azoles **(ketoconazole)**. Administer ketoconazole with an acidic beverage. Moderate Study
- **Proton pump inhibitors** decrease the absorption of antifungals, azoles **(posaconazole)** oral suspension. Avoid. Moderate Study
- Proton pump inhibitors **(esomeprazole, omeprazole)** potentially increase the exposure to benzodiazepines **(clobazam)**. Adjust dose. Moderate Theoretical
- **Proton pump inhibitors** are predicted to decrease the absorption of **bosutinib**. Moderate Study
- **Esomeprazole** is predicted to increase the exposure to **cannabidiol**. Moderate Theoretical
- **Cenobamate** moderately increases the exposure to **omeprazole**. Adjust dose. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the absorption of **ceritinib**. Moderate Theoretical
- **Esomeprazole** is predicted to increase the exposure to **cilostazol**. Moderate Theoretical
- **Omeprazole** is predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. Moderate Study
- Proton pump inhibitors **(esomeprazole, omeprazole)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **dacomitinib**. Avoid. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **dasatinib**. Avoid. Severe Study
- **Proton pump inhibitors** are predicted to decrease the absorption of **dipyridamole** (immediate release tablets). Moderate Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **erlotinib**. Avoid. Moderate Study
- **Fedratinib** moderately increases the exposure to **omeprazole**. Monitor and adjust dose. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **gefitinib**. Severe Theoretical
- HIV-protease inhibitors **(tipranavir)** decrease the exposure to **proton pump inhibitors**. Avoid. Severe Study
- **Proton pump inhibitors** decrease the exposure to HIV-protease inhibitors **(atazanavir)**. Avoid or adjust dose. Severe Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **ledipasvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683. Moderate Theoretical
- **Proton pump inhibitors** decrease the clearance of **methotrexate** (high-dose). Use with caution or avoid. Severe Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **neratinib**. Avoid. Severe Study
- **Proton pump inhibitors** are predicted to decrease the exposure to oral NNRTIs **(rilpivirine)**. Avoid. Severe Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **pazopanib**. Avoid or administer concurrently without food. Moderate Study
- **Proton pump inhibitors** have been reported to decrease the exposure to **pemigatinib**. Avoid. Severe Anecdotal
- **Proton pump inhibitors** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take **selpercatinib** with food, p. 1079. Moderate Study
- Proton pump inhibitors **(esomeprazole, omeprazole)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683, sofosbuvir with velpatasvir p. 685, and sofosbuvir with velpatasvir and voxilaprevir p. 685. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **sotorasib**. Avoid. Moderate Study
- **Esomeprazole** is predicted to slightly to moderately increase the exposure to SSRIs **(citalopram)**. Monitor and adjust dose. Severe Theoretical
- **Omeprazole** slightly to moderately increases the exposure to SSRIs **(citalopram)**. Monitor and adjust dose. Severe Study
- Proton pump inhibitors **(esomeprazole, omeprazole)** are predicted to increase the exposure to SSRIs **(escitalopram)**. Use with caution and adjust dose. Severe Study
- **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 685. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 685. Moderate Study

Proxymetacaine → see anaesthetics, local
Pseudoephedrine → see sympathomimetics, vasoconstrictor
Pyrazinamide

- **Allopurinol** is predicted to increase the risk of hyperuricaemia when given with **pyrazinamide**. Moderate Theoretical

Pyridostigmine → see **TABLE 6** p. 1491 (bradycardia)

- **Aminoglycosides** are predicted to decrease the effects of pyridostigmine. Moderate Theoretical

Pyrimethamine → see antimalarials

Quetiapine → see antipsychotics, second generation

Quinagolide → see dopamine receptor agonists

Quinapril → see ACE inhibitors

Quinine → see antimalarials

Quinolones → see **TABLE 9** p. 1492 (QT-interval prolongation)

ciprofloxacin · delafloxacin · levofloxacin · moxifloxacin · ofloxacin

- Avoid concurrent administration of dairy products and mineral-fortified drinks with *oral* **ciprofloxacin** due to reduced exposure.
- Since systemic absorption can follow topical application of **ciprofloxacin**, **levofloxacin**, and **ofloxacin** the possibility of interactions should be borne in mind.
- Interactions do not generally apply to topical use of **moxifloxacin** unless specified.

- **Ciprofloxacin** is predicted to increase the exposure to **agomelatine**. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **aminophylline**. Adjust dose. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **anagrelide**. Moderate Theoretical
- Oral **antacids** decrease the absorption of oral **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after antacids. Moderate Study
- **Ciprofloxacin** slightly increases the exposure to antiarrhythmics **(lidocaine)**. Mild Study
- **Ciprofloxacin** affects the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Study
- **Ciprofloxacin** increases the concentration of antipsychotics, second generation **(clozapine)**. Monitor adverse effects and adjust dose. Severe Study
- **Ciprofloxacin** is predicted to increase the exposure to antipsychotics, second generation **(olanzapine)**. Adjust dose. Moderate Anecdotal
- Calcium salts **(calcium carbonate)** decrease the absorption of **ciprofloxacin**. Separate administration by 2 hours. Moderate Study
- **Quinolones** increase the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Ciprofloxacin** is predicted to increase the exposure to dopamine receptor agonists **(ropinirole)**. Adjust dose. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Enteral feeds** decrease the exposure to **ciprofloxacin**. Moderate Study
- **Ciprofloxacin** are predicted to increases the exposure to **erlotinib**. Monitor adverse effects and adjust dose. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **ibrutinib**. Adjust **ibrutinib** dose, p. 1062. Severe Theoretical
- Oral **iron** decreases the exposure to oral **quinolones**. Separate administration by at least 2 hours. Moderate Study
- **Lanthanum** moderately decreases the exposure to **quinolones**. **Quinolones** should be taken 2 hours before or 4 hours after **lanthanum**. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **ciprofloxacin**. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- **Ciprofloxacin** slightly increases the exposure to MAO-B inhibitors **(rasagiline)**. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- **Ciprofloxacin** potentially increases the risk of toxicity when given with **methotrexate**. Severe Anecdotal
- **NSAIDs** potentially increase the risk of seizures when given with **quinolones**. Severe Theoretical
- **Ciprofloxacin** very slightly increases the exposure to **pentoxifylline**. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to phenothiazines **(chlorpromazine)**. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to phosphodiesterase type-4 inhibitors **(roflumilast)**. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1035. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to SNRIs **(duloxetine)**. Avoid. Moderate Theoretical
- **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. Moderate Theoretical
- **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **ciprofloxacin**. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Ciprofloxacin** increases the exposure to **tizanidine**. Avoid. Moderate Study
- **Ciprofloxacin** is predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose, p. 724. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to triptans **(zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical
- **Ciprofloxacin** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. Moderate Study

Rabeprazole → see proton pump inhibitors

Rabies immunoglobulin → see immunoglobulins

Rabies vaccine

- Antimalarials **(chloroquine)** decrease the efficacy of **rabies vaccine** (intradermal). Avoid. Moderate Study
- **Hydroxychloroquine** is predicted to decrease efficacy **rabies vaccine**. Moderate Theoretical

Raloxifene → see **TABLE 5** p. 1491 (thromboembolism)

- **Combined hormonal contraceptives** potentially oppose the effects of **raloxifene**. Avoid. Severe Theoretical
- **Hormone replacement therapy** potentially opposes the effects of **raloxifene**. Avoid. Severe Theoretical

Raltegravir

- Oral **antacids** decrease the exposure to oral **raltegravir**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine)** are predicted to affect the exposure to **raltegravir**. Moderate Theoretical
- Antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to affect the exposure to **raltegravir**. Use with caution or avoid. Moderate Theoretical
- Calcium salts **(calcium carbonate)** greatly decrease the exposure to **raltegravir** (high-dose). Avoid. Severe Study
- **Encorafenib** is predicted to increase the exposure to **raltegravir**. Moderate Theoretical
- HIV-protease inhibitors **(atazanavir)** increase the exposure to **raltegravir** (high-dose). Avoid. Moderate Study
- HIV-protease inhibitors **(darunavir)** increase the risk of rash when given with **raltegravir**. Moderate Study
- HIV-protease inhibitors **(fosamprenavir)** boosted with ritonavir decrease the exposure to **raltegravir** and **raltegravir** decreases the exposure to HIV-protease inhibitors **(fosamprenavir)** boosted with ritonavir. Avoid. Severe Study
- HIV-protease inhibitors **(tipranavir)** boosted with ritonavir are predicted to decrease the exposure to **raltegravir** (high-dose). Avoid. Moderate Study
- Rifamycins **(rifampicin)** slightly decrease the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. Moderate Study

Raltegravir (continued)

- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **raltegravir**. Separate administration by at least 2 hours. Moderate Theoretical

Raltitrexed → see **TABLE 15** p. 1493 (myelosuppression)

- **Folates** are predicted to alter the effects of **raltitrexed**. Avoid. Moderate Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **raltitrexed**. UKHSA advises avoid (refer to Green Book). Severe Theoretical

Ramipril → see ACE inhibitors

Ramucirumab → see monoclonal antibodies

Ranibizumab

- **Ranibizumab** increases the risk of bleeding events when given with **coumarins**. Severe Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **danaparoid**. Severe Theoretical
- **Ranibizumab** increases the risk of bleeding events when given with **heparin**. Severe Theoretical
- **Ranibizumab** increases the risk of bleeding events when given with **low molecular-weight heparins**. Severe Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with thrombin inhibitors **(argatroban)**. Severe Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with thrombin inhibitors **(bivalirudin)**. Moderate Theoretical

Ranitidine → see H_2 receptor antagonists

Ranolazine → see **TABLE 9** p. 1492 (QT-interval prolongation)

- **Ranolazine** is predicted to increase the exposure to **afatinib**. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **aliskiren**. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ranolazine**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **Ranolazine** is predicted to increase the exposure to **berotralstat**. Severe Study
- **Ranolazine** is predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ranolazine**. Severe Study
- **Ciclosporin** is predicted to increase the concentration of **ranolazine** and **ranolazine** is predicted to increase the concentration of **ciclosporin**. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **ranolazine**. Avoid. Severe Study
- **Ranolazine** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1492
- **Ranolazine** increases the concentration of **digoxin**. Moderate Study
- **Ranolazine** is predicted to increase the exposure to dopamine receptor agonists **(pramipexole)**. Adjust dose. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Ranolazine** is predicted to increase the exposure to factor XA inhibitors **(apixaban)**. Moderate Theoretical
- **Ranolazine** is predicted to slightly increase the exposure to factor XA inhibitors **(edoxaban)**. Severe Theoretical
- **Ranolazine** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **gilteritinib**. Moderate Theoretical
- **Grapefruit** juice is predicted to increase the concentration of **ranolazine**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ranolazine**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **ranolazine**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **ranolazine**. Severe Study
- **Ranolazine** is predicted to increase the exposure to **larotrectinib**. Mild Theoretical
- **Letermovir** is predicted to increase the exposure to **ranolazine**. Severe Study
- **Ranolazine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ranolazine**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1492
- **Mitotane** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **Ranolazine** is predicted to increase the exposure to **naldemedine**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ranolazine**. Severe Study
- **Nilotinib** is predicted to increase the exposure to **ranolazine**. Severe Study → Also see **TABLE 9** p. 1492
- **Ranolazine** is predicted to increase the exposure to **nintedanib**. Moderate Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **ranolazine**. Avoid. Severe Theoretical
- **Ranolazine** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Ranolazine** is predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical
- **Ranolazine** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **Ranolazine** is predicted to increase the exposure to statins **(atorvastatin)**. Moderate Theoretical
- **Ranolazine** slightly increases the exposure to statins **(simvastatin)**. Adjust **simvastatin** dose, p. 222. Moderate Study
- **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. Severe Anecdotal
- **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Ranolazine** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)** (oral). Unknown Theoretical
- **Ranolazine** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Severe Theoretical
- **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Ranolazine** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Ranolazine** is predicted to increase the exposure to **topotecan**. Severe Study
- **Ranolazine** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Vemurafenib** might increase the exposure to **ranolazine**. Use with caution or avoid. Moderate Theoretical → Also see **TABLE 9** p. 1492

- **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Ranolazine** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492

Rasagiline → see MAO-B inhibitors

Reboxetine

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **reboxetine**. Use with caution and adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **linezolid**. Avoid. Severe Theoretical
- **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **loop diuretics**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **reboxetine**. Avoid. Moderate Study
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with MAO-B inhibitors **(rasagiline, selegiline)**. Avoid. Severe Theoretical
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- **Reboxetine** is predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. Moderate Anecdotal

Regorafenib → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 4** p. 1490 (antiplatelet effects)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **regorafenib**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **regorafenib**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **regorafenib**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **regorafenib**. Moderate Study
- **Dabrafenib** is predicted to decrease the exposure to **regorafenib**. Severe Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **regorafenib**. Severe Study
- **Grapefruit** juice is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- **Imatinib** is predicted to increase the exposure to **regorafenib**. Moderate Study → Also see **TABLE 15** p. 1493 → Also see **TABLE 4** p. 1490
- **Letermovir** is predicted to increase the exposure to **regorafenib**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **regorafenib**. Avoid. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **regorafenib**. Moderate Study
- **Regorafenib** is predicted to increase the exposure to **methotrexate**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study → Also see **TABLE 15** p. 1493
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **regorafenib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **regorafenib**. Moderate Study → Also see **TABLE 15** p. 1493
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **regorafenib**. Severe Study
- NSAIDs **(mefenamic acid)** are predicted to increase the exposure to **regorafenib**. Avoid. Moderate Theoretical → Also see **TABLE 4** p. 1490
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study
- **Regorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **regorafenib**. Avoid. Severe Study
- **Regorafenib** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin)**. Moderate Study
- **Regorafenib** is predicted to increase the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose, p. 221. Moderate Study
- **Regorafenib** is predicted to increase the exposure to **sulfasalazine**. Moderate Study → Also see **TABLE 15** p. 1493
- **Regorafenib** is predicted to increase the exposure to **topotecan**. Moderate Study → Also see **TABLE 15** p. 1493

Relugolix

- Aminoglycosides **(gentamicin)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **relugolix**. Avoid. Moderate Study
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Antiarrhythmics **(propafenone)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **relugolix**. Avoid. Moderate Study
- Antiepileptics **(oxcarbazepine, topiramate)** are predicted to decrease the exposure to **relugolix**. Avoid. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Beta blockers, non-selective **(carvedilol)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Theoretical
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- **Ciclosporin** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- HIV-protease inhibitors **(lopinavir, ritonavir)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- **Ivacaftor** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study

Relugolix (continued)

- **Lapatinib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- **Macrolides** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **relugolix**. Avoid. Moderate Study
- **Neratinib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- NNRTIs **(efavirenz)** are predicted to decrease the exposure to **relugolix**. Avoid. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **relugolix**. Avoid. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **relugolix**. Avoid. Moderate Study
- Tetracyclines **(tetracycline)** are predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Theoretical
- **Vandetanib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study

Remdesivir

- Anti-androgens **(apalutamide, enzalutamide)** might decrease the exposure to **remdesivir**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** might decrease the exposure to **remdesivir**. Avoid. Moderate Theoretical
- Antimalarials **(chloroquine)** might decrease the effects of **remdesivir**. Avoid. Moderate Theoretical
- **Hydroxychloroquine** might decrease the effects of **remdesivir**. Avoid. Moderate Theoretical
- **Mitotane** might decrease the exposure to **remdesivir**. Avoid. Moderate Theoretical
- Rifamycins **(rifampicin)** might decrease the exposure to **remdesivir**. Avoid. Moderate Theoretical

Remifentanil → see opioids

Remimazolam → see benzodiazepines

Repaglinide → see meglitinides

Retigabine → see antiepileptics

Retinoids → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 5** p. 1491 (thromboembolism)

acitretin · adapalene · alitretinoin · bexarotene · isotretinoin · tazarotene · tretinoin

- Avoid concomitant use of keratolytics in patients taking **acitretin** and **isotretinoin**.
- Since systemic absorption can follow topical application of **isotretinoin** and **tretinoin**, the possibility of interactions should be borne in mind.

- **Alcohol** potentially increases the concentration of **acitretin**. Avoid and for 2 months after stopping **acitretin**. Moderate Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. Moderate Theoretical
- Antifungals, azoles **(fluconazole, itraconazole, ketoconazole, miconazole, voriconazole)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. Moderate Theoretical
- Antifungals, azoles **(fluconazole, ketoconazole, voriconazole)** are predicted to increase the risk of tretinoin toxicity when given with **tretinoin**. Moderate Study
- Antifungals, azoles **(posaconazole)** are predicted to increase the risk of tretinoin toxicity when given with **tretinoin**. Monitor and adjust dose. Severe Theoretical
- **Clopidogrel** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. Moderate Theoretical
- Fibrates **(gemfibrozil)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. Moderate Theoretical
- Fibrates **(gemfibrozil)** increase the concentration of **bexarotene**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **alitretinoin**. Adjust **alitretinoin** dose, p. 1356. Moderate Theoretical
- **Acitretin** is predicted to increase the concentration of **methotrexate**. Avoid. Moderate Anecdotal
- Retinoids **(acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. Severe Anecdotal
- Retinoids **(acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. Severe Anecdotal
- **Bexarotene** is predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. Moderate Theoretical
- Retinoids **(acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. Severe Theoretical
- **Tretinoin** is predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. Severe Study

Ribavirin

- **Ribavirin** increases the risk of anaemia and/or leucopenia when given with NRTIs **(zidovudine)**. Avoid. Severe Study

Ribociclib → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 9** p. 1492 (QT-interval prolongation)

FOOD AND LIFESTYLE Avoid concomitant use of pomegranate or pomegranate juice as it is predicted to increase ribociclib exposure.

- **Ribociclib** (high-dose) is predicted to increase the exposure to alpha blockers **(alfuzosin)**. Avoid. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Ribociclib** (high-dose) is predicted to increase the exposure to antiarrhythmics **(amiodarone)**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. Moderate Study → Also see **TABLE 9** p. 1492
- **Ribociclib** (high-dose) is predicted to increase the exposure to antipsychotics, second generation **(quetiapine)**. Avoid. Moderate Theoretical
- **Ribociclib** moderately increases the exposure to benzodiazepines **(midazolam)**. Avoid. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ribociclib**. Moderate Study
- **Ribociclib** is predicted to increase the exposure to **ciclosporin**. Use with caution and adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1492

- **Ribociclib** is predicted to increase the exposure to **digoxin**. Moderate Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **ribociclib**. Moderate Study
- **Ribociclib** (high-dose) is predicted to increase the exposure to **ergotamine**. Avoid. Moderate Theoretical
- **Ribociclib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. Moderate Theoretical
- **Grapefruit** juice is predicted to increase the exposure to **ribociclib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. Moderate Study
- **Imatinib** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 15** p. 1493
- **Letermovir** is predicted to increase the exposure to **ribociclib**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ribociclib**. Avoid or adjust **ribociclib** dose, p. 1077. Moderate Study → Also see **TABLE 9** p. 1492
- Macrolides **(erythromycin)** are predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Ribociclib** is predicted to increase the exposure to **metformin**. Moderate Theoretical
- **Mitotane** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ribociclib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **ribociclib**. Moderate Study → Also see **TABLE 15** p. 1493 → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ribociclib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Ribociclib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Use with caution and adjust dose. Moderate Theoretical
- **Ribociclib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(sildenafil)**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Ribociclib** (high-dose) is predicted to increase the exposure to **pimozide**. Avoid. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Rifamycins **(rifampicin)** are predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **ribociclib**. Avoid. Severe Study
- **Ribociclib** is predicted to increase the exposure to statins **(pravastatin, rosuvastatin)**. Moderate Theoretical
- **Ribociclib** (high-dose) is predicted to increase the exposure to statins **(simvastatin)**. Avoid. Moderate Theoretical
- **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. Moderate Theoretical

Rifabutin → see rifamycins

Rifampicin → see rifamycins

Rifamycins

rifabutin · rifampicin

GENERAL INFORMATION Although some manufacturers class rifabutin as a potent inducer of CYP3A4, clinical data suggests it is potentially a weak inducer, and therefore the BNF does not extrapolate the interactions of potent CYP3A4 inducers to rifabutin. For those who wish to err on the side of caution, see the interactions of rifampicin but bear in mind other mechanisms might be involved.

- **Rifampicin** is predicted to decrease the exposure to 5-HT3-receptor antagonists **(ondansetron)**. Moderate Study
- **Rifampicin** is predicted to markedly decrease the exposure to **abemaciclib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **abrocitinib**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **acalabrutinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **afatinib**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **agomelatine**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Moderate Theoretical
- **Rifampicin** decreases the exposure to **aliskiren**. Moderate Study
- **Rifampicin** decreases the exposure to **aminophylline**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- Oral **antacids** decrease the absorption of oral **rifampicin**. **Rifampicin** should be taken 1 hour before antacids. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to anti-androgens **(abiraterone)**. Avoid. Severe Study
- **Rifamycins** are predicted to decrease the efficacy of anti-androgens **(cyproterone)** with ethinylestradiol (co-cyprindiol). Use alternative methods during treatment with, and for 28 days after, the enzyme inducing drug is stopped. Severe Study
- **Rifampicin** is predicted to decrease the exposure to anti-androgens **(darolutamide)**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antiarrhythmics **(disopyramide, dronedarone)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the efficacy of antiarrhythmics **(propafenone)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to anticholinesterases, centrally acting **(donepezil)**. Mild Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **rifampicin** and **rifampicin** is predicted to decrease the exposure to antiepileptics **(phenobarbital, primidone)**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** slightly decreases the exposure to antiepileptics **(brivaracetam)**. Adjust dose. Moderate Study
- **Rifampicin** decreases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Use with caution and adjust dose. Moderate Study
- **Rifampicin** markedly increases the clearance of antiepileptics **(lamotrigine)**. Adjust **lamotrigine** dose, p. 346. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antiepileptics **(perampanel)**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole)** increase the risk of uveitis when given with **rifabutin**. Adjust dose. Severe Study
- Antifungals, azoles **(itraconazole, posaconazole)** increase the concentration of **rifabutin** and **rifabutin** decreases the concentration of antifungals, azoles **(itraconazole, posaconazole)**. Avoid. Severe Study
- Antifungals, azoles **(ketoconazole)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of antifungals, azoles **(ketoconazole)**. Avoid. Severe Theoretical
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **rifabutin**. Use with caution and adjust dose. Moderate Theoretical
- **Rifampicin** slightly decreases the exposure to antifungals, azoles **(fluconazole)**. Adjust dose. Moderate Study
- **Rifabutin** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Study
- **Rifampicin** markedly decreases the exposure to antifungals, azoles **(itraconazole)**. Avoid and for 14 days after stopping **rifampicin**. Moderate Study
- **Rifampicin** markedly decreases the exposure to antifungals, azoles **(ketoconazole)** and antifungals, azoles **(ketoconazole)** potentially decrease the exposure to **rifampicin**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antifungals, azoles **(posaconazole)**. Avoid. Moderate Anecdotal
- **Rifabutin** decreases the concentration of antifungals, azoles **(voriconazole)** and antifungals, azoles **(voriconazole)** increase

Rifamycins (continued)
the concentration of **rifabutin**. Avoid or adjust **voriconazole** dose, p. 654. Severe Study

- **Rifampicin** very markedly decreases the exposure to antifungals, azoles **(voriconazole)**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antihistamines, non-sedating **(bilastine)**. Moderate Theoretical
- **Rifampicin** increases the clearance of antihistamines, non-sedating **(fexofenadine)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antimalarials **(artemether)** with lumefantrine. Avoid. Severe Study
- **Rifabutin** slightly decreases the exposure to antimalarials **(atovaquone)**. Avoid. Moderate Study
- **Rifampicin** moderately decreases the exposure to antimalarials **(atovaquone)** and antimalarials **(atovaquone)** slightly increase the exposure to **rifampicin**. Avoid. Moderate Study
- **Rifampicin** moderately decreases the exposure to antimalarials **(mefloquine)**. Severe Study
- **Rifampicin** is predicted to decrease the concentration of antimalarials **(piperaquine)**. Avoid. Moderate Theoretical
- **Rifampicin** decreases the exposure to antimalarials **(quinine)**. Severe Study
- **Rifampicin** is predicted to moderately decrease the exposure to antipsychotics, second generation **(aripiprazole)**. Adjust **aripiprazole** dose, p. 427. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation **(cariprazine)**. Avoid. Severe Theoretical
- **Rifampicin** decreases the exposure to antipsychotics, second generation **(clozapine)**. Severe Anecdotal
- **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation **(lurasidone)**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation **(olanzapine)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation **(paliperidone)**. Monitor and adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation **(quetiapine)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to antipsychotics, second generation **(risperidone)**. Adjust dose. Moderate Study
- **Rifampicin** decreases the exposure to **ataluren**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **avapritinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **avatrombopag**. Adjust **avatrombopag** dose with moderate CYP2C9 inducers in chronic immune thrombocytopenia, p. 1120. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **bazedoxifene**. Moderate Theoretical
- **Rifampicin** decreases the exposure to **bedaquiline**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to benzodiazepines **(alprazolam)**. Adjust dose. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to benzodiazepines **(chlordiazepoxide)**. Moderate Theoretical
- **Rifampicin** moderately decreases the exposure to benzodiazepines **(diazepam)**. Avoid. Moderate Study
- **Rifampicin** increases the clearance of benzodiazepines **(lorazepam, nitrazepam)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to benzodiazepines **(midazolam)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the concentration of **berotralstat**. Avoid. Severe Theoretical
- **Rifampicin** moderately decreases the exposure to beta blockers, non-selective **(carvedilol)**. Moderate Study
- **Rifampicin** decreases the exposure to beta blockers, non-selective **(propranolol)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** slightly decreases the exposure to beta blockers, selective **(bisoprolol, metoprolol)**. Mild Study
- **Rifampicin** moderately decreases the exposure to beta blockers, selective **(celiprolol)**. Moderate Study
- **Rifabutin** slightly decreases the exposure to **bictegravir**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **bictegravir**. Avoid. Moderate Study
- **Rifampicin** slightly decreases the exposure to **bortezomib**. Avoid. Severe Study
- **Rifampicin** is predicted to very markedly decrease the exposure to **bosutinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **brigatinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **bupropion**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **buspirone**. Use with caution and adjust dose. Severe Study
- **Rifabutin** has been reported to cause a small decrease in the exposure to **cabotegravir**. Avoid intramuscular **cabotegravir**, p. 696. Moderate Study
- **Rifampicin** modestly decreases the exposure to **cabotegravir**. Avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to **cabozantinib**. Avoid. Moderate Study
- **Rifampicin** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nimodipine)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** greatly decreases the exposure to calcium channel blockers **(diltiazem, verapamil)**. Severe Study
- **Rifampicin** moderately decreases the exposure to calcium channel blockers **(nifedipine)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. Moderate Study
- **Rifampicin** decreases the concentration of **caspofungin**. Adjust **caspofungin** dose, p. 646. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Study
- **Rifampicin** decreases the concentration of **chloramphenicol**. Moderate Study
- **Rifampicin** decreases the concentration of **ciclosporin**. Severe Study
- **Rifampicin** is predicted to alter the effects of **cilostazol**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **cinacalcet**. Monitor and adjust dose. Moderate Study
- **Rifampicin** decreases the exposure to **clomethiazole**. Monitor and adjust dose. Moderate Study
- **Rifampicin** moderately increases the exposure to the active metabolite of **clopidogrel**. Avoid. Moderate Study
- **Rifabutin** decreases the concentration of **cobicistat** and **cobicistat** increases the exposure to **rifabutin**. Avoid or adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **Rifamycins** are predicted to decrease the efficacy of **combined hormonal contraceptives**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Study
- **Rifampicin** is predicted to decrease the exposure to corticosteroids **(budesonide, deflazacort, dexamethasone, fludrocortisone, hydrocortisone, methylprednisolone, prednisolone, triamcinolone)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to corticosteroids **(fluticasone)**. Unknown Theoretical
- **Rifabutin** might decrease the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Rifampicin** decreases the anticoagulant effect of **coumarins**. Severe Study

- **Rifampicin** is predicted to markedly decrease the exposure to **crizotinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Theoretical
- **Rifamycins** decrease the exposure to **dapsone**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- **Rifampicin** is predicted to markedly decrease the exposure to **dasatinib**. Avoid. Severe Study
- **Rifampicin** is predicted to slightly decrease the exposure to **delamanid**. Avoid. Moderate Study
- **Rifamycins** are predicted to decrease the efficacy of **desogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Rifampicin** is predicted to markedly decrease the exposure to **dienogest**. Severe Study
- **Rifampicin** decreases the concentration of **digoxin**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to dipeptidylpeptidase-4 inhibitors **(linagliptin)**. Moderate Study
- **Rifampicin** is predicted to moderately decrease the exposure to dipeptidylpeptidase-4 inhibitors **(saxagliptin)**. Moderate Study
- **Rifampicin** moderately decreases the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. Mild Study
- **Rifampicin** is predicted to decrease the exposure to **elbasvir**. Avoid. Severe Study
- **Rifabutin** is predicted to decrease the exposure to **elexacaftor**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decreases the exposure to **elexacaftor**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **eliglustat**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **eltrombopag** and **eltrombopag** is predicted to increase the concentration of **rifampicin**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **encorafenib**. Severe Theoretical
- **Rifampicin** transiently increases the exposure to endothelin receptor antagonists **(ambrisentan)**. Moderate Study
- **Rifampicin** affects the exposure to endothelin receptor antagonists **(bosentan)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to endothelin receptor antagonists **(macitentan)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **entrectinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **erlotinib**. Avoid or adjust **erlotinib** dose, p. 1057. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **esketamine**. Adjust dose. Moderate Theoretical
- **Rifamycins** are predicted to decrease the efficacy of **estradiol**. Moderate Theoretical
- **Rifamycins** are predicted to decrease the efficacy of **etonogestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Rifampicin** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **Rifampicin** moderately decreases the exposure to **exemestane**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to factor XA inhibitors **(apixaban)**. Use with caution or avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to factor XA inhibitors **(edoxaban)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to factor XA inhibitors **(rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **fedratinib**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the concentration of **fenfluramine**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **fesoterodine**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **fostamatinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to **gilteritinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **glasdegib**. Avoid. Severe Study
- **Rifampicin** markedly affects the exposure to **glecaprevir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the concentration of **guanfacine**. Adjust **guanfacine** dose, p. 384. Moderate Study
- **Rifampicin** decreases the concentration of **haloperidol**. Adjust dose. Moderate Study
- HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with ritonavir increase the exposure to **rifabutin**. Monitor and adjust dose. Severe Study
- HIV-protease inhibitors **(ritonavir)** markedly increase the exposure to **rifabutin**. Avoid or adjust dose. Severe Study
- **Rifampicin** is predicted to moderately to markedly decrease the exposure to HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir)**. Avoid. Severe Study
- **Rifampicin** slightly decreases the exposure to HIV-protease inhibitors **(ritonavir)**. Severe Study
- **Rifampicin** is predicted to decrease the exposure to HIV-protease inhibitors **(tipranavir)**. Avoid. Severe Study
- **Rifamycins** are predicted to decrease the effects of **hormone replacement therapy**. Moderate Anecdotal
- **Rifampicin** is predicted to decrease the exposure to **ibrutinib**. Avoid or monitor. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **idelalisib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **imatinib**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **irinotecan**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to iron chelators **(deferasirox)**. Monitor serum ferritin and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **ivabradine**. Adjust dose. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **Rifampicin** is predicted to moderately decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- **Rifabutin** is predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Study
- **Leflunomide** is predicted to increase the exposure to **rifampicin**. Moderate Theoretical
- **Rifabutin** is predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- **Rifampicin** is predicted to affect the concentration of **letermovir**. Severe Theoretical
- **Rifamycins** are predicted to decrease the efficacy of **levonorgestrel**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **Rifampicin** slightly decreases the exposure to **linezolid**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **lomitapide**. Monitor and adjust dose. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **lorlatinib**. Avoid. Severe Study

Rifamycins (continued)

- **Lumacaftor** is predicted to decrease the exposure to **rifabutin**. Adjust dose. Moderate Theoretical
- Macrolides **(erythromycin)** are predicted to increase the concentration of **rifabutin** and **rifabutin** is predicted to decrease the concentration of macrolides **(erythromycin)**. Monitor and adjust dose. Severe Theoretical
- **Rifabutin** has been reported to cause neutropenia when given with macrolides **(azithromycin)**. Severe Study
- **Rifabutin** decreases the concentration of macrolides **(clarithromycin)** and macrolides **(clarithromycin)** increase the concentration of **rifabutin**. Monitor and adjust dose. Severe Study
- **Rifampicin** greatly decreases the concentration of macrolides **(clarithromycin)**. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **maraviroc**. Adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to meglitinides **(repaglinide)**. Monitor blood glucose and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Rifampicin** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **mirtazapine**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **modafinil**. Moderate Theoretical
- **Rifampicin** decreases the effects of monoclonal antibodies **(brentuximab vedotin)**. Severe Study
- **Rifampicin** is predicted to decrease the exposure to monoclonal antibodies **(polatuzumab vedotin)**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **montelukast**. Mild Study
- **Rifampicin** decreases the concentration of **mycophenolate**. Monitor and adjust dose. Severe Study
- **Rifampicin** is predicted to markedly decrease the exposure to **naldemedine**. Avoid. Severe Study
- **Rifampicin** is predicted to markedly decrease the exposure to **naloxegol**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **neratinib**. Avoid. Severe Study
- **Rifampicin** is predicted to markedly decrease the exposure to neurokinin-1 receptor antagonists **(aprepitant)**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to neurokinin-1 receptor antagonists **(fosaprepitant)**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to neurokinin-1 receptor antagonists **(netupitant)**. Avoid. Severe Study
- **Rifampicin** is predicted to moderately decrease the exposure to **nilotinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **nintedanib**. Moderate Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **rifabutin**. Adjust dose. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **nitisinone**. Adjust dose. Moderate Theoretical
- NNRTIs **(efavirenz)** slightly decrease the exposure to **rifabutin**. Adjust dose. Severe Study
- **Rifabutin** moderately decreases the exposure to NNRTIs **(doravirine)**. Adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to NNRTIs **(doravirine)**. Avoid. Severe Study
- **Rifampicin** slightly decreases the exposure to NNRTIs **(efavirenz)**. Adjust dose. Severe Study
- **Rifabutin** decreases the exposure to NNRTIs **(etravirine)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to NNRTIs **(etravirine)**. Avoid. Severe Theoretical
- **Rifampicin** decreases the concentration of NNRTIs **(nevirapine)**. Avoid. Severe Study
- **Rifabutin** modestly decreases the exposure to NNRTIs **(rilpivirine)**. Avoid or adjust dose—consult product literature. Severe Study
- **Rifampicin** markedly decreases the exposure to NNRTIs **(rilpivirine)**. Avoid. Severe Study
- **Rifamycins** are predicted to decrease the efficacy of **norethisterone**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Rifampicin** moderately decreases the exposure to NSAIDs **(celecoxib, diclofenac, etoricoxib)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to opioids **(alfentanil, fentanyl)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to opioids **(buprenorphine)**. Monitor and adjust dose. Moderate Theoretical
- **Rifampicin** decreases the exposure to opioids **(codeine, morphine)**. Moderate Study
- **Rifampicin** decreases the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study
- **Rifampicin** is predicted to decrease the exposure to opioids **(oxycodone)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **osilodrostat**. Moderate Theoretical
- **Rifampicin** is predicted to moderately decrease the exposure to **osimertinib**. Avoid. Moderate Study
- **Rifampicin** is predicted to moderately decrease the exposure to **ospemifene**. Moderate Study
- **Rifampicin** moderately decreases the exposure to the active metabolites of **ozanimod**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- **Rifampicin** decreases the exposure to **paracetamol**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **pazopanib**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **pemigatinib**. Avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to phosphodiesterase type-4 inhibitors **(apremilast)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-4 inhibitors **(roflumilast)**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(avanafil, tadalafil)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to phosphodiesterase type-5 inhibitors **(sildenafil, vardenafil)**. Moderate Theoretical
- **Rifampicin** is predicted to moderately to markedly decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to **pioglitazone**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **pirfenidone**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to moderately decrease the exposure to **pitolisant**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **ponatinib**. Avoid. Moderate Theoretical
- **Rifampicin** might decrease the exposure to **ponesimod**. Moderate Theoretical
- **Rifampicin** is predicted to markedly decrease the exposure to **praziquantel**. Avoid. Moderate Study
- **Rifampicin** slightly decreases the exposure to **raltegravir**. Avoid or adjust dose—consult product literature. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study

- **Rifampicin** is predicted to decrease the exposure to **reboxetine**. Moderate Anecdotal
- **Rifampicin** is predicted to decrease the exposure to **regorafenib**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **relugolix**. Avoid. Moderate Study
- **Rifampicin** might decrease the exposure to **remdesivir**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to markedly decrease the exposure to **ribociclib**. Avoid. Severe Study
- **Rifampicin** might decrease the exposure to **roxadustat**. Monitor haemoglobin and adjust **roxadustat** dose, p. 1103. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Rifampicin** moderately decreases the exposure to the active metabolite of **selexipag**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **selpercatinib**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **siponimod**. Severe Study
- **Rifampicin** is predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to SNRIs **(duloxetine)**. Moderate Theoretical
- **Rifampicin** moderately decreases the exposure to sodium glucose co-transporter 2 inhibitors **(canagliflozin)**. Adjust **canagliflozin** dose, p. 772. Moderate Study
- **Rifampicin** might decrease the exposure to sodium glucose co-transporter 2 inhibitors **(empagliflozin)**. Avoid or monitor diabetic control. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **sorafenib**. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to **sotorasib**. Avoid. Severe Study
- **Rifampicin** markedly decreases the exposure to statins **(atorvastatin)**. Manufacturer advises take both drugs at the same time. Moderate Study
- **Rifampicin** moderately decreases the exposure to statins **(fluvastatin)**. Monitor and adjust dose. Moderate Study
- **Rifampicin** very markedly decreases the exposure to statins **(simvastatin)**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **sulfonylureas**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study
- **Rifampicin** decreases the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Rifampicin** markedly decreases the exposure to **tamoxifen**. Unknown Study
- **Rifabutin** is predicted to decrease the exposure to taxanes **(cabazitaxel)**. Avoid. Moderate Theoretical
- **Rifampicin** is predicted to decrease the exposure to taxanes **(cabazitaxel)**. Avoid. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to taxanes **(docetaxel)**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to taxanes **(paclitaxel)**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study
- **Rifamycins** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **Rifampicin** might decrease the exposure to **tepotinib**. Avoid. Severe Theoretical
- **Rifampicin** decreases the exposure to **terbinafine**. Adjust dose. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **rifampicin**. Moderate Theoretical
- **Rifampicin** modestly decreases the exposure to tetracyclines **(doxycycline)**. Adjust dose. Moderate Study
- **Rifamycins** are predicted to decrease the exposure to **tezacaftor**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to thrombin inhibitors **(dabigatran)**. Avoid. Severe Study
- **Rifampicin** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- **Rifampicin** might decrease the exposure to **tigecycline**. Mild Theoretical
- **Rifampicin** is predicted to decrease the exposure to **tivozanib**. Severe Study
- **Rifampicin** moderately decreases the exposure to **tizanidine**. Mild Study
- **Rifampicin** is predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical
- **Rifampicin** slightly decreases the exposure to **treprostinil**. Adjust dose. Mild Study
- **Rifampicin** decreases the exposure to **trimethoprim**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **tucatinib**. Avoid. Severe Study
- **Rifamycins** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Rifampicin** is predicted to decrease the exposure to **upadacitinib**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Rifampicin** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Rifampicin** is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to vinca alkaloids **(vinflunine)**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to vinca alkaloids **(vinorelbine)**. Use with caution or avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- **Rifampicin** potentially increases the risk of nephrotoxicity when given with volatile halogenated anaesthetics **(methoxyflurane)**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Rifabutin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Rifampicin** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- **Rifampicin** moderately decreases the exposure to **zolpidem**. Moderate Study
- **Rifampicin** is predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study

Rifaximin

- **Ciclosporin** very markedly increases the exposure to **rifaximin**. Severe Study
- **Rifaximin** has been reported to decrease the anticoagulant effect of coumarins **(warfarin)**. Monitor INR and adjust dose. Severe Anecdotal

Rilpivirine → see NNRTIs

Riluzole

FOOD AND LIFESTYLE Charcoal-grilled foods are predicted to decrease the exposure to riluzole.

- **Combined hormonal contraceptives** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- **Mexiletine** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **riluzole**. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **riluzole**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **riluzole**. Moderate Theoretical

Riociguat → see TABLE 8 p. 1491 (hypotension)

FOOD AND LIFESTYLE Dose adjustment might be necessary if smoking is started or stopped during treatment.

- Oral **antacids** decrease the exposure to oral **riociguat**. **Riociguat** should be taken 1 hour before or 2 hours after antacids. Mild Study
- Antifungals, azoles **(itraconazole, posaconazole)** are predicted to increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 200. Moderate Theoretical
- Antifungals, azoles **(ketoconazole)** moderately increase the exposure to **riociguat**. Adjust **riociguat** dose and monitor blood pressure, p. 200. Moderate Study
- **Ciclosporin** is predicted to increase the exposure to **riociguat**. Moderate Theoretical
- HIV-protease inhibitors **(ritonavir)** are predicted to increase the exposure to **riociguat**. Adjust dose and monitor blood pressure. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **riociguat**. Avoid. Severe Theoretical

Risankizumab → see monoclonal antibodies

Risdiplam

- **Risdiplam** is predicted to increase the concentration of **metformin**. Monitor and adjust dose. Moderate Theoretical

Risedronate → see bisphosphonates

Risperidone → see antipsychotics, second generation

Ritonavir → see HIV-protease inhibitors

Rituximab → see monoclonal antibodies

Rivaroxaban → see factor XA inhibitors

Rivastigmine → see anticholinesterases, centrally acting

Rizatriptan → see triptans

Rocuronium → see neuromuscular blocking drugs, non-depolarising

Roflumilast → see phosphodiesterase type-4 inhibitors

Ropeginterferon alfa → see interferons

Ropinirole → see dopamine receptor agonists

Ropivacaine → see anaesthetics, local

Rosuvastatin → see statins

Rotavirus vaccine → see live vaccines

Rotigotine → see dopamine receptor agonists

Roxadustat

- **Aluminium hydroxide** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after aluminium hydroxide. Moderate Theoretical
- **Antacids** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after antacids. Moderate Theoretical
- **Roxadustat** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Monitor adverse effects and adjust dose. Moderate Study
- Calcium salts **(calcium acetate)** minimally decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after **calcium acetate**. Moderate Study
- **Roxadustat** is predicted to increase the exposure to endothelin receptor antagonists **(bosentan)**. Monitor adverse effects and adjust dose. Moderate Study
- Fibrates **(gemfibrozil)** moderately increase the exposure to **roxadustat**. Monitor haemoglobin and adjust dose. Moderate Study
- **Iron** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after iron. Moderate Theoretical
- **Magnesium** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after magnesium. Moderate Theoretical
- **Roxadustat** is predicted to increase the exposure to meglitinides **(repaglinide)**. Monitor adverse effects and adjust dose. Moderate Study
- Rifamycins **(rifampicin)** might decrease the exposure to **roxadustat**. Monitor haemoglobin and adjust **roxadustat** dose, p. 1103. Moderate Study
- **Sevelamer** modestly decreases the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after **sevelamer**. Moderate Study
- **Roxadustat** is predicted to increase the exposure to statins **(atorvastatin, pravastatin, rosuvastatin, simvastatin)**. Monitor adverse effects and adjust dose. Moderate Study
- **Roxadustat** might increase the exposure to statins **(fluvastatin)**. Monitor adverse effects and adjust dose. Moderate Theoretical
- **Sucroferric oxyhydroxide** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after **sucroferric oxyhydroxide**. Moderate Theoretical
- **Roxadustat** might increase the exposure to **sulfasalazine**. Monitor adverse effects and adjust dose. Moderate Theoretical
- **Roxadustat** is predicted to increase the exposure to sulfonylureas **(glibenclamide)**. Monitor adverse effects and adjust dose. Moderate Study
- **Roxadustat** might increase the exposure to **topotecan**. Monitor adverse effects and adjust dose. Moderate Theoretical

Rucaparib → see TABLE 15 p. 1493 (myelosuppression)

- **Rucaparib** is predicted to increase the exposure to **afatinib**. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **agomelatine**. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **aminophylline**. Adjust dose. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **anagrelide**. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to antiepileptics **(phenytoin)**. Monitor and adjust dose. Moderate Study
- **Rucaparib** increases the concentration of antipsychotics, second generation **(clozapine)**. Monitor adverse effects and adjust dose. Severe Study
- **Rucaparib** is predicted to increase the exposure to antipsychotics, second generation **(olanzapine)**. Adjust dose. Moderate Anecdotal
- **Rucaparib** slightly increases the exposure to benzodiazepines **(midazolam)**. Monitor and adjust dose. Severe Study
- **Rucaparib** is predicted to increase the exposure to **berotralstat**. Severe Study
- **Rucaparib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **ciclosporin**. Monitor and adjust dose. Moderate Study
- **Rucaparib** slightly increases the exposure to coumarins **(warfarin)**. Monitor and adjust dose. Severe Study
- **Rucaparib** is predicted to increase the exposure to dopamine receptor agonists **(ropinirole)**. Adjust dose. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **ergotamine**. Monitor and adjust dose. Moderate Study
- **Rucaparib** are predicted to increases the exposure to **erlotinib**. Monitor adverse effects and adjust dose. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- **Rucaparib** slightly increases the exposure to MAO-B inhibitors **(rasagiline)**. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **nintedanib**. Moderate Study

- **Rucaparib** is predicted to increase the exposure to opioids **(alfentanil, fentanyl)**. Monitor and adjust dose. Moderate Study
- **Rucaparib** is predicted to increase the exposure to phenothiazines **(chlorpromazine)**. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to phosphodiesterase type-4 inhibitors **(roflumilast)**. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **pimozide**. Monitor and adjust dose. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. Moderate Study
- **Rucaparib** is predicted to increase the exposure to SNRIs **(duloxetine)**. Monitor and adjust dose. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. Moderate Study
- **Rucaparib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study → Also see **TABLE 15** p. 1493
- **Rucaparib** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)** (oral). Unknown Theoretical → Also see **TABLE 15** p. 1493
- **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Rucaparib** increases the exposure to **tizanidine**. Avoid. Moderate Study
- **Rucaparib** is predicted to increase the exposure to **topotecan**. Severe Study → Also see **TABLE 15** p. 1493
- **Rucaparib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to triptans **(zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical
- **Rucaparib** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1493

Rufinamide → see antiepileptics

Rupatadine → see antihistamines, non-sedating

Ruxolitinib → see **TABLE 15** p. 1493 (myelosuppression)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ruxolitinib**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole)** are predicted to increase the exposure to **ruxolitinib**. Avoid or adjust dose. Moderate Theoretical
- Antifungals, azoles **(isavuconazole, posaconazole)** are predicted to increase the exposure to **ruxolitinib**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ruxolitinib**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **ruxolitinib**. Moderate Study
- **Dabrafenib** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- **Drugs with anticoagulant effects** (see **TABLE 3** p. 1490) cause bleeding, as can **ruxolitinib**; concurrent use might increase the risk of developing this effect. Severe Theoretical
- **Drugs with antiplatelet effects** (see **TABLE 4** p. 1490) cause bleeding, as can **ruxolitinib**; concurrent use might increase the risk of developing this effect. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- **Grapefruit** juice is predicted to increase the exposure to **ruxolitinib**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. Moderate Study
- **Imatinib** is predicted to increase the exposure to **ruxolitinib**. Moderate Study → Also see **TABLE 15** p. 1493
- **Letermovir** is predicted to increase the exposure to **ruxolitinib**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ruxolitinib**. Adjust dose and monitor adverse effects. Moderate Study
- Macrolides **(erythromycin)** slightly increase the exposure to **ruxolitinib**. Mild Study
- **Mitotane** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study → Also see **TABLE 15** p. 1493
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **ruxolitinib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **ruxolitinib**. Moderate Study → Also see **TABLE 15** p. 1493
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study

Sacituzumab govitecan

- Antiepileptics **(carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- Antifungals, azoles **(ketoconazole)** are predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Encorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Erlotinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Gefitinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with ritonavir are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Lapatinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Pazopanib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Propofol** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Regorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Sorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical

Sacubitril → see **TABLE 8** p. 1491 (hypotension)

Safinamide → see MAO-B inhibitors

Salbutamol → see beta$_2$ agonists

Salmeterol → see beta$_2$ agonists

Sapropterin → see **TABLE 8** p. 1491 (hypotension)

Sapropterin (continued)
- **Methotrexate** is predicted to decrease the efficacy of **sapropterin**. Moderate Theoretical
- **Phosphodiesterase type-5 inhibitors** are predicted to increase the risk of hypotension when given with **sapropterin**. Moderate Theoretical → Also see **TABLE 8** p. 1491
- **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. Moderate Theoretical

Sarilumab → see monoclonal antibodies
Saxagliptin → see dipeptidylpeptidase-4 inhibitors
Secukinumab → see monoclonal antibodies
Selegiline → see MAO-B inhibitors
Selenium

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

- Oral **selenium** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. Severe Theoretical
- Oral **selenium** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **selenium**. Severe Theoretical

Selexipag
- Antiepileptics **(carbamazepine, fosphenytoin, phenytoin)** are predicted to decrease the exposure to the active metabolite of **selexipag**. Adjust dose. Moderate Study
- Antiepileptics **(valproate)** are predicted to increase the exposure to **selexipag**. Unknown Theoretical
- Antifungals, azoles **(fluconazole)** are predicted to increase the exposure to **selexipag**. Unknown Theoretical
- **Clopidogrel** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. Moderate Study
- Fibrates **(gemfibrozil)** increase the exposure to **selexipag**. Avoid. Severe Study
- Iron chelators **(deferasirox)** are predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. Moderate Study
- Rifamycins **(rifampicin)** moderately decrease the exposure to the active metabolite of **selexipag**. Adjust dose. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to **selexipag**. Avoid. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. Moderate Study

Selpercatinib → see **TABLE 9** p. 1492 (QT-interval prolongation)
- **Antacids** are predicted to decrease the exposure to **selpercatinib**. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **selpercatinib**. Avoid. Moderate Study → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **selpercatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **selpercatinib**. Avoid. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole)** are predicted to increase the exposure to **selpercatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. Moderate Study → Also see **TABLE 9** p. 1492
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **selpercatinib**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **selpercatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Dabrafenib** is predicted to decrease the exposure to **selpercatinib**. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **selpercatinib**. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to **ergotamine**. Avoid. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to **everolimus**. Avoid. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take 2 hours before or 10 hours after **H_2 receptor antagonists**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. Moderate Study
- **Imatinib** is predicted to increase the exposure to **selpercatinib**. Moderate Study
- **Letermovir** is predicted to increase the exposure to **selpercatinib**. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to loop diuretics **(torasemide)**. Avoid. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **selpercatinib**. Adjust **selpercatinib** dose, p. 1079. Moderate Study → Also see **TABLE 9** p. 1492
- Macrolides **(erythromycin)** are predicted to increase the exposure to **selpercatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Selpercatinib** increases the exposure to meglitinides **(repaglinide)**. Avoid. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **selpercatinib**. Avoid. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to **montelukast**. Avoid. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **selpercatinib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **selpercatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **selpercatinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Selpercatinib** is predicted to increase the exposure to opioids **(alfentanil, buprenorphine)**. Avoid. Moderate Study
- **Proton pump inhibitors** are predicted to decrease the exposure to **selpercatinib**. Manufacturer advises take **selpercatinib** with food, p. 1079. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **selpercatinib**. Avoid. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to **selexipag**. Avoid. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to **sirolimus**. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to **sorafenib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **St John's wort** is predicted to decrease the exposure to **selpercatinib**. Avoid. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to taxanes **(paclitaxel)**. Avoid. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to **temsirolimus**. Moderate Study

Selumetinib
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Selumetinib** might increase the risk of bleeding when given with **aspirin**. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Selumetinib** might increase the risk of bleeding when given with **cangrelor**. Severe Theoretical

- **Selumetinib** might increase the risk of bleeding when given with **cilostazol**. Severe Theoretical
- **Selumetinib** might increase the risk of bleeding when given with **clopidogrel**. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Selumetinib** might increase the risk of bleeding when given with **coumarins**. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Dabrafenib** is predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- **Selumetinib** might increase the risk of bleeding when given with **dipyridamole**. Moderate Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- **Grapefruit** juice is predicted to increase the exposure to **selumetinib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Idelalisib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Imatinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Letermovir** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Mitotane** is predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- **Moclobemide** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- **Nilotinib** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- **Selumetinib** might increase the risk of bleeding when given with **phenindione**. Severe Theoretical
- **Selumetinib** might increase the risk of bleeding when given with **prasugrel**. Severe Theoretical
- Proton pump inhibitors **(esomeprazole, omeprazole)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- SSRIs **(fluoxetine)** are predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Theoretical
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **selumetinib**. Avoid or monitor—consult product literature. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- **Selumetinib** might increase the risk of bleeding when given with **ticagrelor**. Severe Theoretical
- **Vitamin E substances** might increase the risk of bleeding when given with **selumetinib**. Avoid. Severe Theoretical

Semaglutide → see glucagon-like peptide-1 receptor agonists
Sertraline → see SSRIs
Sevelamer

SEPARATION OF ADMINISTRATION Drugs for which a reduction in bioavailability could be clinically important should be administered at least 1 hour before, or 3 hours after, sevelamer; alternatively consider monitoring blood concentrations.

- **Sevelamer** modestly decreases the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after **sevelamer**. Moderate Study

Sevoflurane → see volatile halogenated anaesthetics
Sildenafil → see phosphodiesterase type-5 inhibitors
Siltuximab → see monoclonal antibodies
Silver sulfadiazine

PHARMACOLOGY Silver might inactivate enzymatic debriding agents—concurrent use might not be appropriate.

Simvastatin → see statins
Siponimod → see **TABLE 6** p. 1491 (bradycardia), **TABLE 9** p. 1492 (QT-interval prolongation)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **siponimod**. Severe Study
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study → Also see **TABLE 6** p. 1491
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **siponimod**. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, miconazole, posaconazole)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study → Also see **TABLE 6** p. 1491
- **Cobicistat** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Theoretical
- **Crizotinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study → Also see **TABLE 6** p. 1491
- **Dabrafenib** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study
- **Letermovir** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study
- **Live vaccines** might increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid and for 4 weeks after stopping **siponimod**. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study
- **Mifepristone** is predicted to increase the exposure to **siponimod**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **siponimod**. Severe Study
- Monoclonal antibodies **(alemtuzumab)** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **siponimod**. Avoid. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study

Siponimod (continued)

- **Nilotinib** is predicted to increase the exposure to **siponimod**. Avoid depending on other drugs taken—consult product literature. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **siponimod**. Severe Study
- **St John's wort** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. Severe Theoretical

Sirolimus

- **Abrocitinib** might increase the exposure to **sirolimus**. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the concentration of **sirolimus**. Severe Anecdotal
- Antiarrhythmics **(dronedarone)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Berotralstat** is predicted to increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Brigatinib** potentially decreases the concentration of **sirolimus**. Avoid. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Cenobamate** is predicted to decrease the exposure to **sirolimus**. Adjust dose. Moderate Theoretical
- **Ceritinib** is predicted to increase the exposure to **sirolimus**. Avoid. Severe Theoretical
- **Sirolimus** is predicted to affect the efficacy of **chenodeoxycholic acid**. Monitor and adjust dose. Moderate Theoretical
- **Ciclosporin** moderately increases the exposure to **sirolimus**. Separate administration by 4 hours. Severe Study
- **Cobicistat** is predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Crizotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Eliglustat** is predicted to increase the exposure to **sirolimus**. Adjust dose. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the concentration of **sirolimus** and **sirolimus** potentially increases the concentration of endothelin receptor antagonists **(bosentan)**. Avoid. Severe Theoretical
- **Entrectinib** is predicted to increase the exposure to **sirolimus**. Mild Theoretical
- **Fedratinib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. Moderate Theoretical
- **Grapefruit** juice increases the concentration of **sirolimus**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Ibrutinib** is predicted to increase the exposure to **sirolimus**. Separate administration by at least 6 hours. Moderate Theoretical
- **Idelalisib** is predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- **Imatinib** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Ivacaftor** is predicted to increase the exposure to **sirolimus**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **sirolimus**. Moderate Theoretical
- **Larotrectinib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. Mild Theoretical
- **Letermovir** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **sirolimus**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **sirolimus**. Avoid. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **sirolimus**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the concentration of **sirolimus**. Avoid. Severe Study
- Macrolides **(erythromycin)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Sirolimus** is predicted to decrease the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Mifepristone** is predicted to increase the exposure to **sirolimus**. Severe Theoretical
- **Mirabegron** is predicted to increase the exposure to **sirolimus**. Mild Theoretical
- **Mitotane** is predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- Monoclonal antibodies **(sarilumab)** potentially affect the exposure to **sirolimus**. Monitor and adjust dose. Moderate Theoretical
- **Neratinib** is predicted to increase the exposure to **sirolimus**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** increase the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Nilotinib** increases the concentration of **sirolimus**. Monitor and adjust dose. Moderate Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **sirolimus**. Severe Theoretical
- NNRTIs **(doravirine)** are predicted to decrease the exposure to **sirolimus**. Monitor **sirolimus** concentration and adjust dose, p. 906. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. Moderate Theoretical
- **Olaparib** might increase the exposure to **sirolimus**. Moderate Theoretical
- **Osimertinib** is predicted to increase the exposure to **sirolimus**. Moderate Study
- **Palbociclib** is predicted to increase the exposure to **sirolimus**. Adjust dose. Moderate Theoretical
- **Pemigatinib** might increase the exposure to **sirolimus**. Separate administration by at least 6 hours. Moderate Theoretical
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **sirolimus**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **sirolimus**. Avoid. Severe Theoretical
- **Ribociclib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the concentration of **sirolimus**. Avoid. Severe Study
- **Rucaparib** is predicted to increase the exposure to **sirolimus**. Monitor and adjust dose. Moderate Study
- **Selpercatinib** is predicted to increase the exposure to **sirolimus**. Moderate Study
- **Sotorasib** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. Severe Theoretical
- **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. Severe Study

- **Tepotinib** is predicted to increase the concentration of **sirolimus.** Severe Study
- **Tucatinib** is predicted to increase the exposure to **sirolimus.** Avoid or adjust dose. Moderate Theoretical
- **Vandetanib** is predicted to increase the exposure to **sirolimus.** Moderate Study
- **Velpatasvir** is predicted to increase the exposure to **sirolimus.** Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **sirolimus.** Use with caution and adjust dose. Severe Theoretical
- **Venetoclax** is predicted to increase the exposure to **sirolimus.** Avoid or adjust dose. Severe Study

Sitagliptin → see dipeptidylpeptidase-4 inhibitors

SNRIs → see **TABLE 18** p. 1494 (hyponatraemia), **TABLE 13** p. 1493 (serotonin syndrome), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 11** p. 1492 (CNS depressant effects), **TABLE 4** p. 1490 (antiplatelet effects)

duloxetine · venlafaxine

- Antiepileptics **(phenytoin)** are predicted to decrease the exposure to **duloxetine.** Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **venlafaxine.** Moderate Study → Also see **TABLE 9** p. 1492
- **Axitinib** is predicted to increase the exposure to **duloxetine.** Moderate Theoretical → Also see **TABLE 4** p. 1490
- **Duloxetine** is predicted to increase the exposure to beta blockers, selective **(metoprolol).** Moderate Study
- **Cobicistat** is predicted to increase the exposure to **venlafaxine.** Moderate Study
- **Duloxetine** is predicted to increase the exposure to **eliglustat.** Avoid or adjust dose—consult product literature. Severe Study
- **Givosiran** is predicted to increase the exposure to **duloxetine.** Use with caution and adjust dose. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **venlafaxine.** Mild Study
- **Venlafaxine** slightly increases the exposure to **haloperidol.** Severe Study → Also see **TABLE 9** p. 1492 → Also see **TABLE 11** p. 1492
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **duloxetine.** Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **venlafaxine.** Moderate Study
- **Idelalisib** is predicted to increase the exposure to **venlafaxine.** Moderate Study
- **Leflunomide** is predicted to decrease the exposure to **duloxetine.** Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **venlafaxine.** Moderate Study → Also see **TABLE 9** p. 1492
- **Mexiletine** is predicted to increase the exposure to **duloxetine.** Moderate Theoretical
- **Osilodrostat** is predicted to increase the exposure to **duloxetine.** Moderate Theoretical
- **Duloxetine** might increase the risk of adverse effects when given with **ozanimod.** Severe Theoretical
- **Duloxetine** is predicted to increase the exposure to **pitolisant.** Use with caution and adjust dose. Moderate Study
- **Venlafaxine** is predicted to increase the exposure to **pitolisant.** Use with caution and adjust dose. Mild Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **duloxetine.** Avoid. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **duloxetine.** Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **duloxetine.** Monitor and adjust dose. Moderate Study
- SSRIs **(fluvoxamine)** markedly increase the exposure to **duloxetine.** Avoid. Severe Study → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493 → Also see **TABLE 4** p. 1490
- **Tacrolimus** potentially increases the risk of serotonin syndrome when given with **venlafaxine.** Severe Anecdotal
- **Teriflunomide** is predicted to decrease the exposure to **duloxetine.** Moderate Theoretical
- **Vaborbactam** is predicted to increase the concentration of **venlafaxine.** Unknown Theoretical
- **Vemurafenib** is predicted to increase the exposure to **duloxetine.** Use with caution or avoid. Moderate Theoretical

Sodium bicarbonate

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use of **sodium bicarbonate** unless specified.

- Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **acalabrutinib.** Separate administration by at least 2 hours. Moderate Study
- Oral **sodium bicarbonate** decreases the absorption of antifungals, azoles **(ketoconazole).** Moderate Study
- Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **bosutinib. Bosutinib** should be taken at least 12 hours before antacids. Moderate Theoretical
- Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **dasatinib.** Separate administration by at least 2 hours. Moderate Study
- Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **erlotinib. Erlotinib** should be taken 2 hours before or 4 hours after antacids. Moderate Theoretical
- Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **gefitinib.** Moderate Theoretical
- Oral **sodium bicarbonate** -containing antacids are predicted to decrease the absorption of oral **lapatinib.** Avoid. Moderate Theoretical
- **Sodium bicarbonate** decreases the concentration of **lithium.** Severe Anecdotal
- **Sodium bicarbonate** is predicted to decrease the efficacy of **methenamine.** Avoid. Moderate Theoretical
- Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral **neratinib.** Separate administration by at least 3 hours. Mild Theoretical
- Oral **sodium bicarbonate** -containing antacids might affect the exposure to oral **nilotinib.** Separate administration by at least 2 hours. Moderate Study
- Oral **sodium bicarbonate** -containing antacids are predicted to decrease the exposure to oral NNRTIs **(rilpivirine). Rilpivirine** should be taken 4 hours before or 2 hours after antacids. Severe Theoretical
- Oral **sodium bicarbonate** -containing antacids might decrease the absorption of oral **pazopanib. Pazopanib** should be taken 1 hour before or 2 hours after antacids. Moderate Theoretical
- Oral **sodium bicarbonate** is predicted to decrease the exposure to oral **sotorasib. Sotorasib** should be taken 4 hours before or 10 hours after antacids. Moderate Theoretical

Sodium citrate

- **Sodium citrate** is predicted to decrease the efficacy of **methenamine.** Avoid. Moderate Theoretical
- **Sodium citrate** is predicted to increase the risk of adverse effects when given with **sucralfate.** Avoid. Moderate Theoretical

Sodium glucose co-transporter 2 inhibitors → see **TABLE 14** p. 1493 (antidiabetic drugs), **TABLE 8** p. 1491 (hypotension)

canagliflozin · dapagliflozin · empagliflozin · ertugliflozin

- Antiepileptics **(phenytoin)** might decrease the exposure to **empagliflozin.** Avoid or monitor diabetic control. Moderate Theoretical
- **Fenfluramine** might decrease blood glucose concentrations when given with **sodium glucose co-transporter 2 inhibitors.** Moderate Theoretical
- Rifamycins **(rifampicin)** moderately decrease the exposure to **canagliflozin.** Adjust **canagliflozin** dose, p. 772. Moderate Study
- Rifamycins **(rifampicin)** might decrease the exposure to **empagliflozin.** Avoid or monitor diabetic control. Moderate Theoretical

Sodium oxybate → see **TABLE 8** p. 1491 (hypotension), **TABLE 11** p. 1492 (CNS depressant effects)

- Antiepileptics **(valproate)** increase the exposure to **sodium oxybate.** Adjust **sodium oxybate** dose, p. 524. Moderate Study

Sodium phenylbutyrate

- Antiepileptics **(valproate)** potentially decrease the effects of **sodium phenylbutyrate.** Moderate Anecdotal
- **Corticosteroids** potentially decrease the effects of **sodium phenylbutyrate.** Moderate Anecdotal
- **Haloperidol** potentially decreases the effects of **sodium phenylbutyrate.** Moderate Anecdotal

Sodium picosulfate → see **TABLE 18** p. 1494 (hyponatraemia)

Sodium picosulfate (continued)

- Oral **sodium picosulfate** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Severe Theoretical

Sodium zirconium cyclosilicate

- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **antifungals, azoles**. Separate administration by at least 2 hours. Moderate Theoretical
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **dasatinib**. Separate administration by at least 2 hours. Moderate Theoretical
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **erlotinib**. Separate administration by at least 2 hours. Moderate Theoretical
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **HIV-protease inhibitors**. Separate administration by at least 2 hours. Moderate Theoretical
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **ledipasvir**. Separate administration by at least 2 hours. Moderate Theoretical
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **nilotinib**. Separate administration by at least 2 hours. Moderate Theoretical
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to NNRTIs **(rilpivirine)**. Separate administration by at least 2 hours. Moderate Theoretical
- **Sodium zirconium cyclosilicate** is predicted to decrease the exposure to **raltegravir**. Separate administration by at least 2 hours. Moderate Theoretical

Sofosbuvir

- **Sofosbuvir** is predicted to increase the risk of severe bradycardia or heart block when given with antiarrhythmics **(amiodarone)**. Refer to specialist literature. Severe Anecdotal
- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study
- Antiepileptics **(fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Theoretical
- **H_2 receptor antagonists** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683, sofosbuvir with velpatasvir p. 685, and sofosbuvir with velpatasvir and voxilaprevir p. 685. Moderate Study
- HIV-protease inhibitors **(tipranavir)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Theoretical
- **Modafinil** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Theoretical
- **Proton pump inhibitors** potentially decrease the exposure to **sofosbuvir**. Adjust dose, see ledipasvir with sofosbuvir p. 683, sofosbuvir with velpatasvir p. 685, and sofosbuvir with velpatasvir and voxilaprevir p. 685. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study

Solifenacin → see **TABLE 10** p. 1492 (antimuscarinics)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. Severe Study
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **solifenacin**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 10** p. 1492
- **Cobicistat** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. Severe Study
- **Idelalisib** is predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **solifenacin**. Adjust solifenacin p. 842 or tamsulosin with solifenacin p. 848 dose; avoid in hepatic and renal impairment. Severe Study
- **Mitotane** is predicted to decrease the exposure to **solifenacin**. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **solifenacin**. Moderate Theoretical

Solriamfetol

- **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid and for 14 days after stopping **MAO-B inhibitors**. Severe Theoretical
- **Solriamfetol** is predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical

Somatropin

- **Corticosteroids** are predicted to decrease the effects of **somatropin**. Moderate Theoretical

Sorafenib → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 4** p. 1490 (antiplatelet effects)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **sorafenib**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sorafenib**. Moderate Theoretical
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the exposure to **sorafenib**. Moderate Study
- **Sorafenib** increases the anticoagulant effect of **coumarins**. Severe Anecdotal
- **Dabrafenib** is predicted to decrease the exposure to **sorafenib**. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **sorafenib**. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **sorafenib**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Neomycin** moderately decreases the exposure to **sorafenib**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **sorafenib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Sorafenib** is predicted to increase the risk of bleeding events when given with **phenindione**. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **sorafenib**. Moderate Theoretical
- **Sorafenib** is predicted to increase the exposure to the active component of **sacituzumab govitecan**. Severe Theoretical
- **Selpercatinib** is predicted to increase the exposure to **sorafenib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- **St John's wort** is predicted to decrease the exposure to **sorafenib**. Moderate Study

Sotalol → see beta blockers, non-selective

Sotorasib → see **TABLE 1** p. 1490 (hepatotoxicity)

- **Sotorasib** is predicted to increase the exposure to **aliskiren**. Avoid or adjust dose. Moderate Study
- Oral **antacids** are predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **sotorasib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sotorasib**. Avoid. Severe Study → Also see **TABLE 1** p. 1490
- **Sotorasib** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Avoid or adjust dose. Moderate Study
- **Sotorasib** moderately decreases the exposure to benzodiazepines **(midazolam)**. Moderate Study
- Oral calcium salts **(calcium carbonate)** are predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. Moderate Theoretical

- **Sotorasib** is predicted to increase the exposure to **colchicine**. Avoid or adjust dose. Moderate Study
- **Sotorasib** is predicted to increase the exposure to **digoxin**. Avoid or adjust dose. Moderate Study
- **Sotorasib** is predicted to decrease the exposure to **ergotamine**. Avoid or adjust dose. Moderate Theoretical
- **Sotorasib** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. Moderate Study
- **Sotorasib** is predicted to increase the exposure to factor XA inhibitors **(edoxaban, rivaroxaban)**. Avoid or adjust dose. Moderate Study
- **H_2 receptor antagonists** are predicted to decrease the exposure to **sotorasib**. Avoid. Moderate Study
- **Sotorasib** is predicted to increase the exposure to **loperamide**. Avoid or adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **sotorasib**. Avoid. Severe Study
- **Sotorasib** is predicted to decrease the exposure to opioids **(alfentanil)**. Avoid or adjust dose. Moderate Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **sotorasib**. Avoid. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **sotorasib**. Avoid. Severe Study
- **Sotorasib** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. Moderate Study
- Oral **sodium bicarbonate** is predicted to decrease the exposure to oral **sotorasib**. **Sotorasib** should be taken 4 hours before or 10 hours after antacids. Moderate Theoretical
- **Sotorasib** is predicted to increase the exposure to **talazoparib**. Avoid or adjust dose. Moderate Study
- **Sotorasib** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)**. Avoid or adjust dose. Moderate Study
- **Sotorasib** is predicted to decrease the exposure to **temsirolimus**. Avoid or adjust dose. Moderate Theoretical
- **Sotorasib** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Avoid or adjust dose. Moderate Study
- **Sotorasib** is predicted to increase the exposure to **topotecan**. Avoid or adjust dose. Moderate Study

Spironolactone → see aldosterone antagonists

SSRIs → see **TABLE 18** p. 1494 (hyponatraemia), **TABLE 13** p. 1493 (serotonin syndrome), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 4** p. 1490 (antiplatelet effects)

citalopram · dapoxetine · escitalopram · fluoxetine · fluvoxamine · paroxetine · sertraline

- SSRIs **(fluoxetine, fluvoxamine)** are predicted to increase the exposure to **abrocitinib**. Adjust **abrocitinib** dose, p. 1354. Severe Study
- **Fluvoxamine** very markedly increases the exposure to **agomelatine**. Avoid. Severe Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **amfetamines**. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Fluvoxamine** moderately to markedly increases the exposure to **aminophylline**. Avoid. Severe Study
- **Fluvoxamine** decreases the clearance of anaesthetics, local **(ropivacaine)**. Avoid prolonged use. Moderate Study
- **Fluvoxamine** is predicted to increase the exposure to **anagrelide**. Moderate Theoretical → Also see **TABLE 4** p. 1490
- Anti-androgens **(apalutamide)** are predicted to decrease the exposure to **citalopram**. Avoid or monitor. Mild Study → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to SSRIs **(citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Fluvoxamine** is predicted to increase the exposure to antiarrhythmics **(propafenone)**. Monitor and adjust dose. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the concentration of **paroxetine**. Moderate Study
- **Sertraline** potentially increases the risk of toxicity when given with antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Anecdotal
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to increase the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor and adjust dose. Severe Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- Antifungals, azoles **(fluconazole, voriconazole)** are predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. Severe Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. Severe Study
- Antifungals, azoles **(voriconazole)** are predicted to increase the exposure to **citalopram**. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antihistamines, sedating **(cyproheptadine)** potentially decrease the effects of **SSRIs**. Moderate Anecdotal
- SSRIs **(fluoxetine, paroxetine)** are predicted to moderately increase the exposure to antipsychotics, second generation **(aripiprazole)**. Adjust **aripiprazole** dose, p. 427. Moderate Study
- **Fluvoxamine** increases the exposure to antipsychotics, second generation **(asenapine)**. Moderate Study
- **Paroxetine** moderately increases the exposure to antipsychotics, second generation **(asenapine)**. Moderate Study
- **Fluvoxamine** increases the concentration of antipsychotics, second generation **(clozapine)**. Monitor adverse effects and adjust dose. Severe Study
- **Fluvoxamine** moderately increases the exposure to antipsychotics, second generation **(olanzapine)**. Adjust dose. Severe Anecdotal
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to antipsychotics, second generation **(risperidone)**. Adjust dose. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. Severe Study
- **Fluvoxamine** moderately increases the exposure to benzodiazepines **(alprazolam)**. Adjust dose. Moderate Study
- SSRIs **(fluoxetine, fluvoxamine)** potentially increase the exposure to benzodiazepines **(clobazam)**. Adjust dose. Moderate Theoretical
- **Fluvoxamine** moderately increases the exposure to benzodiazepines **(diazepam)**. Moderate Study
- **Fluvoxamine** moderately increases the concentration of beta blockers, non-selective **(propranolol)**. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to beta blockers, selective **(metoprolol, nebivolol)**. Moderate Study
- **Bupropion** is predicted to increase the exposure to **dapoxetine**. Moderate Theoretical
- **Fluvoxamine** markedly decreases the clearance of **caffeine citrate**. Monitor and adjust dose. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cannabidiol**. Moderate Theoretical
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to increase the exposure to **cilostazol**. Adjust **cilostazol** dose, p. 252. Moderate Theoretical → Also see **TABLE 4** p. 1490
- **Cinacalcet** is predicted to increase the exposure to **dapoxetine**. Moderate Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **cinacalcet**. Adjust dose. Moderate Theoretical
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to decrease the efficacy of **clopidogrel**. Avoid. Severe Theoretical → Also see **TABLE 4** p. 1490

SSRIs (continued)

- **Cobicistat** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. Severe Study
- **Cobicistat** is predicted to increase the exposure to SSRIs **(citalopram, escitalopram, fluoxetine, fluvoxamine, paroxetine, sertraline)**. Monitor and adjust dose. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to slightly increase the exposure to **darifenacin**. Mild Study
- **Fluvoxamine** is predicted to increase the exposure to dopamine receptor agonists **(ropinirole)**. Adjust dose. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Fluvoxamine** is predicted to increase the exposure to **eltrombopag**. Moderate Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **erlotinib**. Monitor adverse effects and adjust dose. Moderate Theoretical
- **Fluoxetine** is predicted to increase the exposure to **fedratinib**. Avoid depending on other drugs taken—consult product literature. Moderate Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **fedratinib**. Avoid. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. Mild Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Gilteritinib** is predicted to decrease the efficacy of SSRIs **(escitalopram, fluoxetine, sertraline)**. Avoid. Moderate Theoretical
- **Grapefruit** juice moderately increases the exposure to **sertraline**. Avoid. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to SSRIs **(citalopram, escitalopram)**. Adjust dose. Moderate Study
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to SSRIs **(paroxetine, sertraline)**. Moderate Study
- **Fluoxetine** increases the concentration of **haloperidol**. Adjust dose. Moderate Anecdotal
- **Fluvoxamine** increases the concentration of **haloperidol**. Adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. Severe Study
- **Idelalisib** is predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. Severe Study
- **Imatinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical → Also see **TABLE 4** p. 1490
- **Letermovir** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- **Fluoxetine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Unknown Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Mild Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **dapoxetine**. Avoid potent CYP3A4 inhibitors or adjust **dapoxetine** dose, p. 887. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- **Fluvoxamine** very markedly increases the exposure to **melatonin**. Avoid. Severe Study
- SSRIs **(fluoxetine, fluvoxamine, paroxetine)** are predicted to increase the exposure to **mexiletine**. Moderate Study
- **Moclobemide** is predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. Severe Study → Also see **TABLE 13** p. 1493
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with neuromuscular blocking drugs, non-depolarising **(mivacurium)**. Unknown Theoretical
- **Nilotinib** is predicted to increase the exposure to **dapoxetine**. Adjust **dapoxetine** dose with moderate CYP3A4 inhibitors, p. 887. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of opioids **(codeine)**. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of opioids **(tramadol)**. Severe Study → Also see **TABLE 13** p. 1493
- **SSRIs** might increase the risk of adverse effects when given with **ozanimod**. Severe Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **pentoxifylline**. Moderate Theoretical
- **Fluvoxamine** is predicted to increase the exposure to phenothiazines **(chlorpromazine)**. Moderate Theoretical
- **Fluvoxamine** is predicted to increase the exposure to phosphodiesterase type-4 inhibitors **(roflumilast)**. Moderate Study
- **Fluvoxamine** is predicted to moderately increase the exposure to **pirfenidone**. Avoid. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- **Fluvoxamine** moderately increases the exposure to **pomalidomide**. Adjust **pomalidomide** dose, p. 1035. Moderate Study
- **Paroxetine** slightly increases the exposure to **procyclidine**. Monitor and adjust dose. Moderate Study
- Proton pump inhibitors **(esomeprazole)** are predicted to slightly to moderately increase the exposure to **citalopram**. Monitor and adjust dose. Severe Theoretical
- Proton pump inhibitors **(esomeprazole, omeprazole)** are predicted to increase the exposure to **escitalopram**. Use with caution and adjust dose. Severe Study
- Proton pump inhibitors **(omeprazole)** slightly to moderately increase the exposure to **citalopram**. Monitor and adjust dose. Severe Study
- **Fluvoxamine** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- **Fluoxetine** is predicted to increase the exposure to **selumetinib**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Fluvoxamine** is predicted to increase the exposure to **selumetinib**. Avoid or monitor—consult product literature. Severe Theoretical
- **Fluvoxamine** markedly increases the exposure to SNRIs **(duloxetine)**. Avoid. Severe Study → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493 → Also see **TABLE 4** p. 1490
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to SSRIs **(citalopram)**. Monitor and adjust dose. Severe Anecdotal → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493 → Also see **TABLE 4** p. 1490
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to SSRIs **(dapoxetine)**. Moderate Theoretical → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493 → Also see **TABLE 4** p. 1490
- SSRIs **(fluoxetine, fluvoxamine)** are predicted to increase the exposure to SSRIs **(escitalopram)**. Use with caution and adjust dose. Severe Study → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493 → Also see **TABLE 4** p. 1490
- **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Unknown Theoretical
- **Fluvoxamine** very slightly increases the exposure to **talazoparib**. Moderate Study

- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Terbinafine** is predicted to increase the exposure to **fluoxetine**. Adjust dose. Moderate Theoretical
- **Terbinafine** moderately increases the exposure to **paroxetine**. Moderate Study
- **Terbinafine** is predicted to increase the exposure to SSRIs **(citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. Moderate Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to the active metabolite of **tetrabenazine**. Moderate Study
- **Fluvoxamine** moderately to markedly increases the exposure to **theophylline**. Avoid. Severe Study
- **Fluvoxamine** very markedly increases the exposure to **tizanidine**. Avoid. Severe Study
- SSRIs **(fluoxetine, fluvoxamine)** given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493
- **Fluvoxamine** increases the exposure to tricyclic antidepressants **(amitriptyline, imipramine)**. Adjust dose. Severe Study → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493
- **Fluvoxamine** markedly increases the exposure to tricyclic antidepressants **(clomipramine)**. Adjust dose. Severe Study → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493
- **Fluvoxamine** increases the concentration of triptans **(frovatriptan)**. Severe Study → Also see **TABLE 13** p. 1493
- **Fluvoxamine** is predicted to increase the exposure to triptans **(zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. Severe Theoretical → Also see **TABLE 13** p. 1493
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study → Also see **TABLE 13** p. 1493 → Also see **TABLE 4** p. 1490

St John's wort → see **TABLE 13** p. 1493 (serotonin syndrome)

- **St John's wort** is predicted to decrease the exposure to **abemaciclib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **acalabrutinib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **afatinib**. Moderate Study
- **St John's wort** is predicted to slightly decrease the exposure to aldosterone antagonists **(eplerenone)**. Avoid. Moderate Study
- **St John's wort** decreases the exposure to **aliskiren**. Moderate Study
- **St John's wort** is predicted to decrease the concentration of **aminophylline**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to anti-androgens **(darolutamide)**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to antiarrhythmics **(dronedarone)**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to antiepileptics **(brivaracetam)**. Moderate Theoretical
- **St John's wort** is predicted to decrease the concentration of antiepileptics **(carbamazepine)**. Monitor and adjust dose. Moderate Theoretical
- **St John's wort** is predicted to decrease the concentration of antiepileptics **(fosphenytoin, phenobarbital, phenytoin, primidone)**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to antiepileptics **(perampanel)**. Monitor and adjust dose. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to antiepileptics **(tiagabine)**. Avoid. Mild Theoretical
- **St John's wort** is predicted to decrease the exposure to antifungals, azoles **(isavuconazole)**. Avoid. Severe Theoretical
- **St John's wort** moderately decreases the exposure to antifungals, azoles **(voriconazole)**. Avoid. Moderate Study
- **St John's wort** is predicted to decrease the concentration of antimalarials **(piperaquine)**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to antipsychotics, second generation **(cariprazine)**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to antipsychotics, second generation **(lurasidone)**. Monitor and adjust dose. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to antipsychotics, second generation **(paliperidone)**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to antipsychotics, second generation **(quetiapine)**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **avapritinib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **axitinib**. Avoid or adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **bedaquiline**. Avoid. Severe Study
- **St John's wort** moderately decreases the exposure to benzodiazepines **(alprazolam)**. Moderate Study
- **St John's wort** moderately decreases the exposure to benzodiazepines **(midazolam)**. Monitor and adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the concentration of **berotralstat**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **bictegravir**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **bosutinib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **brigatinib**. Avoid. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **cabozantinib**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Monitor and adjust dose. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to calcium channel blockers **(diltiazem, verapamil)**. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **cannabidiol**. Adjust dose. Mild Study
- **St John's wort** is predicted to decrease the exposure to **ceritinib**. Avoid. Severe Theoretical
- **St John's wort** decreases the concentration of **ciclosporin**. Avoid. Moderate Study
- **St John's wort** is predicted to alter the effects of **cilostazol**. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **cobicistat**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **cobimetinib**. Avoid. Severe Theoretical
- **St John's wort** decreases the efficacy of **combined hormonal contraceptives**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **St John's wort** decreases the anticoagulant effect of **coumarins**. Avoid. Severe Anecdotal
- **St John's wort** is predicted to decrease the exposure to **crizotinib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **dabrafenib**. Avoid. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **darifenacin**. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **dasatinib**. Severe Study
- **St John's wort** is predicted to decrease the efficacy of **desogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **St John's wort** decreases the concentration of **digoxin**. Avoid. Severe Anecdotal
- **St John's wort** is predicted to decrease the exposure to **dolutegravir**. Adjust **dolutegravir** dose, p. 696. Severe Study
- **St John's wort** is predicted to decrease the exposure to **dronabinol**. Avoid or adjust dose. Mild Study
- **St John's wort** is predicted to moderately decrease the exposure to **elbasvir**. Avoid. Severe Study

St John's wort (continued)

- **St John's wort** is predicted to decrease the exposure to **elexacaftor**. Avoid. Severe Theoretical
- **St John's wort** is predicted to increase the exposure to **eliglustat**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the concentration of **elvitegravir**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **encorafenib**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to endothelin receptor antagonists **(bosentan)**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to endothelin receptor antagonists **(macitentan)**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **entrectinib**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the effects of **ergotamine**. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **erlotinib**. Severe Study
- **St John's wort** is predicted to decrease the efficacy of **etonogestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **St John's wort** is predicted to decrease the concentration of **everolimus**. Avoid or adjust dose. Severe Study
- **St John's wort** is predicted to decrease the exposure to **exemestane**. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to factor XA inhibitors **(apixaban)**. Use with caution or avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to factor XA inhibitors **(edoxaban)**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to factor XA inhibitors **(rivaroxaban)**. Avoid unless patient can be monitored for signs of thrombosis. Severe Study
- **St John's wort** is predicted to decrease the exposure to **fedratinib**. Avoid. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **fesoterodine**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **fingolimod**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to the active metabolite of **fostemsavir**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **gefitinib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **gilteritinib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **glasdegib**. Avoid or adjust **glasdegib** dose, p. 1087. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **glecaprevir**. Avoid. Severe Study
- **St John's wort** is predicted to markedly decrease the exposure to **grazoprevir**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the concentration of **guanfacine**. Adjust dose. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **HIV-protease inhibitors**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the efficacy of **hormone replacement therapy**. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **ibrutinib**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **idelalisib**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **imatinib**. Moderate Study
- **St John's wort** slightly decreases the exposure to **irinotecan**. Avoid. Severe Study
- **St John's wort** decreases the exposure to **ivabradine**. Avoid. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **ivacaftor**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **ixazomib**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **lapatinib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **larotrectinib**. Avoid. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **ledipasvir**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the concentration of **letermovir**. Moderate Theoretical
- **St John's wort** is predicted to decrease the efficacy of **levonorgestrel**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **lorlatinib**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **maraviroc**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **midostaurin**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **mifepristone**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **naldemedine**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **naloxegol**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **neratinib**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to neurokinin-1 receptor antagonists **(netupitant)**. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **nilotinib**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **nintedanib**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **nirmatrelvir** boosted with ritonavir. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to NNRTIs **(doravirine, rilpivirine)**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the concentration of NNRTIs **(efavirenz, nevirapine)**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to NNRTIs **(etravirine)**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the efficacy of **norethisterone**. MHRA advises avoid. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **St John's wort** is predicted to decrease the exposure to **olaparib**. Avoid. Moderate Theoretical
- **St John's wort** decreases the exposure to opioids **(methadone)**. Monitor and adjust dose. Severe Study → Also see **TABLE 13** p. 1493
- **St John's wort** moderately decreases the exposure to opioids **(oxycodone)**. Adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **osimertinib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **ospemifene**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **palbociclib**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **panobinostat**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **pazopanib**. Severe Study
- **St John's wort** is predicted to decrease the exposure to **pemigatinib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to phosphodiesterase type-4 inhibitors **(apremilast)**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **phosphodiesterase type-5 inhibitors**. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **pibrentasvir**. Avoid. Severe Study
- **St John's wort** slightly decreases the exposure to **pioglitazone**. Mild Study
- **St John's wort** is predicted to decrease the exposure to **pitolisant**. Monitor and adjust dose. Moderate Theoretical

- **St John's wort** is predicted to decrease the exposure to **ponatinib**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **ranolazine**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **regorafenib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **relugolix**. Avoid. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **ribociclib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **ruxolitinib**. Monitor and adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **selpercatinib**. Avoid. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **selumetinib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **siponimod**. Manufacturer advises caution depending on genotype—consult product literature. Severe Theoretical
- **St John's wort** is predicted to decrease the concentration of **sirolimus**. Monitor and adjust dose. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **sofosbuvir**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **sorafenib**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **sunitinib**. Moderate Study
- **St John's wort** decreases the concentration of **tacrolimus**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to taxanes **(cabazitaxel)**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to taxanes **(docetaxel)**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to taxanes **(paclitaxel)**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **Tepotinib** might decrease the exposure to **St John's wort**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. Severe Theoretical
- **St John's wort** potentially decreases the exposure to **theophylline**. Severe Anecdotal
- **St John's wort** is predicted to decrease the exposure to thrombin inhibitors **(dabigatran)**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **St John's wort** might decrease the exposure to **tigecycline**. Mild Theoretical
- **St John's wort** is predicted to decrease the exposure to **tivozanib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **topotecan**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **treprostinil**. Adjust dose. Mild Theoretical
- **St John's wort** is predicted to decrease the exposure to **tucatinib**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **St John's wort** is predicted to decrease the exposure to **vandetanib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **St John's wort** is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine, vinorelbine)**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to vinca alkaloids **(vinflunine)**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical

Statins → see TABLE 1 p. 1490 (hepatotoxicity)

atorvastatin · fluvastatin · pravastatin · rosuvastatin · simvastatin

- **Acipimox** is predicted to increase the risk of rhabdomyolysis when given with **statins**. Severe Theoretical
- **Atorvastatin** slightly to moderately increases the exposure to **aliskiren**. Moderate Study
- Oral **antacids** decrease the absorption of oral **rosuvastatin**. Separate administration by 2 hours. Moderate Study
- Anti-androgens **(apalutamide)** are predicted to decrease the exposure to **atorvastatin**. Moderate Study
- Anti-androgens **(apalutamide)** slightly decrease the exposure to **rosuvastatin**. Mild Study
- Anti-androgens **(apalutamide)** are predicted to decrease the exposure to **simvastatin**. Avoid or monitor. Moderate Study
- Anti-androgens **(darolutamide)** are predicted to increase the exposure to statins **(atorvastatin, fluvastatin, rosuvastatin)**. Avoid. Severe Theoretical
- Anti-androgens **(enzalutamide)** are predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- Anti-androgens **(darolutamide)** are predicted to increase the concentration of statins **(pravastatin, simvastatin)**. Moderate Theoretical
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Moderate Theoretical
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **fluvastatin**. Moderate Study
- Antiarrhythmics **(amiodarone)** increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. Severe Study
- Antiarrhythmics **(dronedarone)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study
- Antiarrhythmics **(dronedarone)** slightly increase the exposure to **rosuvastatin**. Adjust dose. Severe Study
- Antiarrhythmics **(dronedarone)** moderately increase the exposure to **simvastatin**. Monitor and adjust dose. Severe Study
- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. Moderate Study → Also see **TABLE 1** p. 1490
- Antiepileptics **(carbamazepine, eslicarbazepine)** moderately decrease the exposure to **simvastatin**. Monitor and adjust dose. Moderate Study → Also see **TABLE 1** p. 1490
- Antiepileptics **(eslicarbazepine)** are predicted to decrease the exposure to **atorvastatin**. Monitor and adjust dose. Moderate Theoretical
- Antiepileptics **(eslicarbazepine)** decrease the exposure to **rosuvastatin**. Moderate Study
- Antiepileptics **(phenytoin)** moderately decrease the exposure to **atorvastatin**. Moderate Study
- Antiepileptics **(phenytoin)** are predicted to decrease the exposure to **simvastatin**. Moderate Study
- Antiepileptics **(fosphenytoin, phenobarbital, primidone)** are predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, miconazole)** are predicted to increase the exposure to **fluvastatin**. Moderate Study → Also see **TABLE 1** p. 1490
- Antifungals, azoles **(isavuconazole)** slightly increase the exposure to **atorvastatin**. Moderate Study
- Antifungals, azoles **(isavuconazole)** are predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. Severe Theoretical

Statins (continued)

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study → Also see **TABLE 1** p. 1490
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **simvastatin**. Avoid. Severe Study → Also see **TABLE 1** p. 1490
- Antifungals, azoles **(miconazole)** (including the oral gel) might increase the exposure to **atorvastatin**. Moderate Theoretical
- Antifungals, azoles **(miconazole)** (including the oral gel) are predicted to increase the exposure to **simvastatin**. Avoid. Severe Anecdotal
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to **atorvastatin**. Avoid. Severe Anecdotal
- Antifungals, azoles **(posaconazole)** markedly to very markedly increase the exposure to **simvastatin**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole)** are predicted to increase the exposure to statins **(atorvastatin, simvastatin)**. Monitor and adjust dose. Severe Anecdotal → Also see **TABLE 1** p. 1490
- Antifungals, azoles **(isavuconazole)** are predicted to increase the exposure to statins **(fluvastatin, rosuvastatin)**. Moderate Theoretical
- **Bempedoic acid** increases the exposure to **pravastatin**. Moderate Study
- **Bempedoic acid** increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. Moderate Study
- Calcium channel blockers **(amlodipine)** slightly increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. Mild Study
- Calcium channel blockers **(diltiazem)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** moderately increase the exposure to **simvastatin**. Monitor and adjust dose. Severe Study
- Calcium channel blockers **(verapamil)** are predicted to slightly to moderately increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Theoretical
- **Cenobamate** is predicted to decrease the exposure to **simvastatin**. Adjust dose. Moderate Theoretical
- Cephalosporins **(ceftobiprole)** are predicted to increase the concentration of **statins**. Moderate Theoretical
- **Ciclosporin** markedly to very markedly increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 220. Severe Study
- **Ciclosporin** moderately increases the exposure to **fluvastatin**. Severe Study
- **Ciclosporin** markedly to very markedly increases the exposure to **pravastatin**. Adjust dose. Severe Study
- **Ciclosporin** markedly increases the exposure to **rosuvastatin**. Avoid. Severe Study
- **Ciclosporin** markedly to very markedly increases the exposure to **simvastatin**. Avoid. Severe Study
- **Cilostazol** is predicted to increase the exposure to **atorvastatin**. Moderate Theoretical
- **Cilostazol** slightly increases the exposure to **simvastatin**. Moderate Study
- **Clopidogrel** increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- **Cobicistat** is predicted to increase the exposure to **simvastatin**. Avoid. Severe Study
- **Colchicine** has been reported to cause rhabdomyolysis when given with **statins**. Severe Anecdotal
- Statins **(fluvastatin, rosuvastatin)** increase the anticoagulant effect of **coumarins**. Monitor INR and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **pravastatin**. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. Severe Theoretical
- **Dabrafenib** is predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- **Statins** are predicted to increase the risk of rhabdomyolysis when given with **daptomycin**. Severe Theoretical
- **Dasatinib** is predicted to increase the exposure to **simvastatin**. Moderate Theoretical
- **Elbasvir** with grazoprevir slightly increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 220. Moderate Study
- **Elbasvir** with grazoprevir is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 220. Moderate Theoretical
- **Elbasvir** with grazoprevir moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. Moderate Study
- **Elbasvir** with grazoprevir is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. Moderate Theoretical
- **Elexacaftor** is predicted to increase the exposure to statins **(atorvastatin, pravastatin, rosuvastatin, simvastatin)**. Moderate Theoretical
- **Eltrombopag** is predicted to increase the exposure to **statins**. Monitor and adjust dose. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- Fibrates **(bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. Severe Study
- Fibrates **(bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. Severe Study
- Fibrates **(bezafibrate, ciprofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **simvastatin** dose, p. 222. Severe Study
- Fibrates **(ciprofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Avoid or adjust dose. Severe Study
- Fibrates **(ciprofibrate)** increase the risk of rhabdomyolysis when given with **fluvastatin**. Severe Study
- Fibrates **(fenofibrate)** increase the risk of rhabdomyolysis when given with **atorvastatin**. Monitor and adjust **fenofibrate** dose, p. 217. Severe Anecdotal
- Fibrates **(fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **fluvastatin**. Use with caution and adjust **fenofibrate** dose, p. 217. Severe Theoretical
- Fibrates **(fenofibrate)** are predicted to increase the risk of rhabdomyolysis when given with **pravastatin**. Avoid. Severe Theoretical
- Fibrates **(fenofibrate)** increase the risk of rhabdomyolysis when given with **rosuvastatin**. Adjust **fenofibrate** and **rosuvastatin** doses, p. 217, p. 221. Severe Anecdotal
- Fibrates **(fenofibrate)** increase the risk of rhabdomyolysis when given with **simvastatin**. Adjust **fenofibrate** dose, p. 217. Severe Anecdotal
- Fibrates **(gemfibrozil)** increase the risk of rhabdomyolysis when given with **statins**. Avoid. Severe Anecdotal
- Fibrates **(bezafibrate)** increase the risk of rhabdomyolysis when given with statins **(atorvastatin, fluvastatin)**. Severe Study
- **Fostamatinib** slightly increases the exposure to **rosuvastatin**. Moderate Study
- **Fostamatinib** slightly increases the exposure to **simvastatin**. Monitor adverse effects and adjust dose. Moderate Study
- **Fostemsavir** increases the exposure to **rosuvastatin**. Adjust starting dose and monitor. Severe Study
- **Fostemsavir** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, simvastatin)**. Adjust starting dose and monitor. Severe Theoretical
- **Fusidate** has been reported to cause rhabdomyolysis when given with **statins**. Avoid. Severe Anecdotal
- **Glecaprevir** with pibrentasvir markedly increases the exposure to **atorvastatin**. Avoid. Severe Study
- **Glecaprevir** with pibrentasvir is predicted to increase the exposure to **fluvastatin**. Moderate Theoretical
- **Glecaprevir** with pibrentasvir moderately increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 221. Moderate Study

- **Glecaprevir** with pibrentasvir moderately increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 221. Moderate Study
- **Glecaprevir** with pibrentasvir moderately increases the exposure to **simvastatin**. Avoid. Moderate Study
- **Grapefruit** juice increases the exposure to **atorvastatin**. Mild Study
- **Grapefruit** juice increases the exposure to **simvastatin**. Avoid. Severe Study
- **Grazoprevir** moderately increases the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 220. Moderate Study
- **Grazoprevir** with elbasvir is predicted to increase the exposure to **fluvastatin**. Adjust **fluvastatin** dose, p. 220. Moderate Theoretical
- **Grazoprevir** with elbasvir moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. Moderate Study
- **Grazoprevir** with elbasvir is predicted to increase the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- **HIV-protease inhibitors** might affect the exposure to **pravastatin**. Moderate Study
- HIV-protease inhibitors **(atazanavir, lopinavir)** are predicted to increase the exposure to **rosuvastatin**. Avoid or adjust **rosuvastatin** dose, p. 221. Severe Study
- HIV-protease inhibitors **(darunavir, ritonavir)** are predicted to increase the exposure to **rosuvastatin**. Avoid or adjust dose. Severe Study
- HIV-protease inhibitors **(fosamprenavir, tipranavir)** are predicted to increase the exposure to **rosuvastatin**. Use with caution and adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **simvastatin**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- **Idelalisib** is predicted to increase the exposure to **simvastatin**. Avoid. Severe Study
- **Imatinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Theoretical
- **Imatinib** moderately increases the exposure to **simvastatin**. Monitor and adjust dose. Severe Study
- **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Moderate Anecdotal
- **Ledipasvir** with sofosbuvir is predicted to increase the exposure to **rosuvastatin**. Avoid. Severe Theoretical
- **Ledipasvir** with sofosbuvir is predicted to increase the exposure to statins **(fluvastatin, pravastatin, simvastatin)**. Monitor and adjust dose. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **rosuvastatin**. Adjust dose. Moderate Study → Also see **TABLE 1** p. 1490
- **Leflunomide** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, pravastatin, simvastatin)**. Moderate Study → Also see **TABLE 1** p. 1490
- **Letermovir** moderately increases the exposure to **atorvastatin**. Avoid or adjust **atorvastatin** dose, p. 220. Severe Study
- **Letermovir** is predicted to increase the exposure to **fluvastatin**. Monitor and adjust dose. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **pravastatin**. Avoid or adjust dose. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to statins **(rosuvastatin, simvastatin)**. Avoid. Severe Study
- **Lomitapide** increases the exposure to **atorvastatin**. Adjust **lomitapide** dose or separate administration by 12 hours, p. 226. Mild Study → Also see **TABLE 1** p. 1490
- **Lomitapide** increases the exposure to **simvastatin**. Monitor and adjust **simvastatin** dose, p. 222. Moderate Study → Also see **TABLE 1** p. 1490
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **atorvastatin**. Avoid or adjust dose and monitor rhabdomyolysis. Severe Study
- Macrolides **(clarithromycin)** moderately increase the exposure to **pravastatin**. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **simvastatin**. Avoid. Severe Study
- Macrolides **(erythromycin)** slightly increase the exposure to **atorvastatin**. Monitor and adjust dose. Severe Study
- Macrolides **(erythromycin)** slightly increase the exposure to **pravastatin**. Severe Study
- Macrolides **(erythromycin)** markedly increase the exposure to **simvastatin**. Avoid. Severe Study
- **Mifepristone** moderately increases the exposure to **fluvastatin**. Moderate Study
- **Mifepristone** very markedly increases the exposure to **simvastatin**. Severe Study
- **Mitotane** is predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- Monoclonal antibodies **(sarilumab)** are predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- Monoclonal antibodies **(tocilizumab)** are predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Monitor and adjust dose. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to statins **(atorvastatin, simvastatin)**. Monitor and adjust dose. Severe Theoretical
- **Nicotinic acid** might increase the risk of rhabdomyolysis when given with **statins**. Use with caution or avoid. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **atorvastatin**. Monitor and adjust dose. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **simvastatin**. Monitor and adjust dose. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **simvastatin**. Avoid. Severe Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of statins **(atorvastatin, rosuvastatin)**. Adjust dose. Severe Theoretical
- NNRTIs **(etravirine)** slightly decrease the exposure to **atorvastatin**. Monitor and adjust dose. Moderate Study
- NNRTIs **(etravirine)** are predicted to increase the exposure to **fluvastatin**. Adjust dose. Severe Theoretical
- NNRTIs **(etravirine)** are predicted to decrease the exposure to **simvastatin**. Adjust dose. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- **Olaparib** is predicted to increase the exposure to **statins**. Moderate Theoretical
- **Osimertinib** causes a small increase in the exposure to **rosuvastatin**. Severe Study
- **Pazopanib** might cause increased ALT concentrations when given with **simvastatin**. Moderate Study
- **Pazopanib** might affect the exposure to statins **(atorvastatin, pravastatin, rosuvastatin)**. Moderate Theoretical
- **Rosuvastatin** is predicted to increase the anticoagulant effect of **phenindione**. Monitor INR and adjust dose. Severe Theoretical
- **Pibrentasvir** with glecaprevir markedly increases the exposure to **atorvastatin**. Avoid. Severe Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **fluvastatin**. Moderate Theoretical
- **Pibrentasvir** with glecaprevir moderately increases the exposure to **pravastatin**. Use with caution and adjust **pravastatin** dose, p. 221. Moderate Study
- **Pibrentasvir** with glecaprevir moderately increases the exposure to **rosuvastatin**. Use with caution and adjust **rosuvastatin** dose, p. 221. Moderate Study
- **Pibrentasvir** with glecaprevir moderately increases the exposure to **simvastatin**. Avoid. Moderate Study
- **Ranolazine** is predicted to increase the exposure to **atorvastatin**. Moderate Theoretical
- **Ranolazine** slightly increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. Moderate Study
- **Regorafenib** is predicted to increase the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. Moderate Study
- **Regorafenib** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin)**. Moderate Study
- **Ribociclib** (high-dose) is predicted to increase the exposure to **simvastatin**. Avoid. Moderate Theoretical

Statins (continued)

- **Ribociclib** is predicted to increase the exposure to statins **(pravastatin, rosuvastatin)**. Moderate Theoretical
- Rifamycins **(rifampicin)** markedly decrease the exposure to **atorvastatin**. Manufacturer advises take both drugs at the same time. Moderate Study
- Rifamycins **(rifampicin)** moderately decrease the exposure to **fluvastatin**. Monitor and adjust dose. Moderate Study
- Rifamycins **(rifampicin)** very markedly decrease the exposure to **simvastatin**. Moderate Study
- **Roxadustat** might increase the exposure to **fluvastatin**. Monitor adverse effects and adjust dose. Moderate Theoretical
- **Roxadustat** is predicted to increase the exposure to statins **(atorvastatin, pravastatin, rosuvastatin, simvastatin)**. Monitor adverse effects and adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the exposure to statins **(atorvastatin, simvastatin)**. Moderate Study
- **Fluvastatin** slightly increases the exposure to sulfonylureas **(glibenclamide)**. Mild Study
- **Atorvastatin** very slightly increases the exposure to **talazoparib**. Moderate Study
- Taxanes **(cabazitaxel)** are predicted to affect the exposure to statins **(atorvastatin, pravastatin, rosuvastatin, simvastatin)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. Moderate Theoretical
- **Tedizolid** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, rosuvastatin)**. Avoid. Moderate Study
- **Tepotinib** might increase the exposure to statins **(atorvastatin, fluvastatin, rosuvastatin)**. Moderate Theoretical
- **Teriflunomide** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose, p. 221. Moderate Study → Also see **TABLE 1** p. 1490
- **Teriflunomide** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, pravastatin, simvastatin)**. Moderate Study → Also see **TABLE 1** p. 1490
- **Ticagrelor** slightly to moderately increases the exposure to **simvastatin**. Adjust **simvastatin** dose, p. 222. Moderate Study
- **Tivozanib** is predicted to decrease the exposure to **rosuvastatin**. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **simvastatin**. Avoid or adjust dose. Moderate Theoretical
- **Velpatasvir** with sofosbuvir slightly increases the exposure to **atorvastatin**. Severe Study
- **Velpatasvir** moderately increases the exposure to **rosuvastatin**. Adjust **rosuvastatin** dose and monitor adverse effects, p. 221. Severe Study
- **Velpatasvir** with sofosbuvir is predicted to increase the exposure to statins **(fluvastatin, simvastatin)**. Monitor adverse effects and adjust dose. Severe Theoretical
- **Venetoclax** is predicted to increase the exposure to **atorvastatin**. Moderate Study
- **Venetoclax** is predicted to increase the exposure to statins **(fluvastatin, pravastatin, rosuvastatin, simvastatin)**. Moderate Theoretical
- **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **atorvastatin**. Adjust **atorvastatin** dose, p. 220. Moderate Theoretical
- **Voxilaprevir** with sofosbuvir and velpatasvir moderately increases the exposure to **pravastatin**. Monitor and adjust **pravastatin** dose, p. 221. Moderate Study
- **Voxilaprevir** with sofosbuvir and velpatasvir markedly increases the exposure to **rosuvastatin**. Avoid. Severe Study
- **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to statins **(fluvastatin, simvastatin)**. Avoid. Moderate Theoretical

Stiripentol → see antiepileptics

Streptokinase → see **TABLE 3** p. 1490 (anticoagulant effects)

Streptomycin → see aminoglycosides

Streptozocin → see **TABLE 1** p. 1490 (hepatotoxicity), **TABLE 15** p. 1493 (myelosuppression), **TABLE 2** p. 1490 (nephrotoxicity)

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **streptozocin**. UKHSA advises avoid (refer to Green Book). Severe Theoretical

Strontium → see **TABLE 5** p. 1491 (thromboembolism)

- Oral **antacids** decrease the absorption of oral **strontium**. Separate administration by 2 hours. Moderate Study
- Oral **calcium salts** decrease the exposure to **strontium**. Separate administration by 2 hours. Moderate Study
- **Strontium** is predicted to decrease the absorption of **quinolones**. Avoid. Moderate Theoretical
- **Strontium** is predicted to decrease the absorption of **tetracyclines**. Avoid. Moderate Theoretical

Sucralfate

- **Sucralfate** is predicted to decrease the exposure to **bictegravir**. Avoid. Moderate Theoretical
- **Sucralfate** potentially decreases the effects of coumarins **(warfarin)**. Separate administration by 2 hours. Moderate Anecdotal
- **Sucralfate** decreases the absorption of **digoxin**. Separate administration by 2 hours. Severe Anecdotal
- **Sucralfate** decreases the absorption of **dolutegravir**. Moderate Study
- **Sucralfate** increases the risk of blocked enteral or nasogastric tubes when given with **enteral feeds**. Separate administration by 1 hour. Moderate Study
- **Potassium citrate** increases the risk of adverse effects when given with **sucralfate**. Avoid. Moderate Theoretical
- **Sucralfate** decreases the exposure to **quinolones**. Separate administration by 2 hours. Moderate Study
- **Sodium citrate** is predicted to increase the risk of adverse effects when given with **sucralfate**. Avoid. Moderate Theoretical
- **Sucralfate** decreases the absorption of **sulpiride**. Separate administration by 2 hours. Moderate Study
- Oral **sucralfate** might decrease the absorption of oral **tetracyclines**. Moderate Theoretical
- **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. Moderate Study
- **Sucralfate** decreases the absorption of thyroid hormones **(levothyroxine)**. Separate administration by at least 4 hours. Moderate Study
- **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. Moderate Study

Sucroferric oxyhydroxide

- **Sucroferric oxyhydroxide** might decrease the exposure to **roxadustat**. **Roxadustat** should be taken at least 1 hour after **sucroferric oxyhydroxide**. Moderate Theoretical

Sugammadex

- **Sugammadex** is predicted to decrease the exposure to **combined hormonal contraceptives**. Refer to patient information leaflet for missed pill advice. Severe Theoretical
- **Sugammadex** is predicted to decrease the exposure to **desogestrel**. Refer to patient information leaflet for missed pill advice. Severe Theoretical
- **Sugammadex** is predicted to decrease the efficacy of **etonogestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Sugammadex** is predicted to decrease the exposure to **levonorgestrel**. Use additional contraceptive precautions. Severe Theoretical
- **Sugammadex** is predicted to decrease the exposure to **medroxyprogesterone**. Use additional contraceptive precautions. Severe Theoretical
- **Sugammadex** is predicted to decrease the exposure to **norethisterone**. Use additional contraceptive precautions. Severe Theoretical

Sulfadiazine → see sulfonamides

Sulfadoxine → see sulfonamides

Sulfamethoxazole → see sulfonamides

Sulfasalazine → see **TABLE 1** p. 1490 (hepatotoxicity), **TABLE 15** p. 1493 (myelosuppression)

- Anti-androgens **(darolutamide)** are predicted to increase the exposure to **sulfasalazine**. Avoid. Severe Theoretical
- Antifungals, azoles **(isavuconazole)** are predicted to increase the exposure to **sulfasalazine**. Moderate Theoretical
- **Sulfasalazine** decreases the concentration of **digoxin**. Moderate Study
- **Sulfasalazine** is predicted to decrease the absorption of **folates**. Moderate Study

- **Leflunomide** is predicted to increase the exposure to **sulfasalazine.** Moderate Study → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- **Regorafenib** is predicted to increase the exposure to **sulfasalazine.** Moderate Study → Also see **TABLE 15** p. 1493
- **Roxadustat** might increase the exposure to **sulfasalazine.** Monitor adverse effects and adjust dose. Moderate Theoretical
- **Tedizolid** is predicted to increase the exposure to **sulfasalazine.** Avoid. Moderate Study
- **Tepotinib** might increase the exposure to **sulfasalazine.** Severe Theoretical
- **Teriflunomide** is predicted to increase the exposure to **sulfasalazine.** Moderate Study → Also see **TABLE 1** p. 1490
- **Velpatasvir** is predicted to increase the exposure to **sulfasalazine.** Moderate Theoretical
- **Venetoclax** is predicted to increase the exposure to **sulfasalazine.** Moderate Theoretical
- **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine.** Avoid. Severe Theoretical

Sulfonamides

sulfadiazine · sulfadoxine · sulfamethoxazole

- **Sulfonamides** potentially increase the risk of methaemoglobinaemia when given with topical anaesthetics, local **(prilocaine).** Use with caution or avoid. Severe Anecdotal
- **Sulfadiazine** is predicted to increase the concentration of antiepileptics **(fosphenytoin).** Monitor and adjust dose. Moderate Study
- **Sulfadiazine** increases the concentration of antiepileptics **(phenytoin).** Monitor and adjust dose. Moderate Study
- Antimalarials **(pyrimethamine)** increase the risk of adverse effects when given with **sulfonamides.** Severe Study
- **Chloroprocaine** is predicted to decrease the effects of **sulfonamides.** Avoid. Severe Theoretical
- **Sulfadiazine** is predicted to increase the anticoagulant effect of **coumarins.** Severe Theoretical
- **Sulfamethoxazole** increases the anticoagulant effect of **coumarins.** Severe Study
- **Sulfonamides** are predicted to increase the risk of methaemoglobinaemia when given with **dapsone.** Severe Theoretical
- **Sulfonamides** are predicted to increase the exposure to **methotrexate.** Use with caution or avoid. Severe Theoretical
- **Potassium aminobenzoate** is predicted to affect the efficacy of **sulfonamides.** Avoid. Severe Theoretical
- **Sulfonamides** are predicted to increase the exposure to **sulfonylureas.** Moderate Study
- **Sulfonamides** are predicted to increase the effects of **thiopental.** Moderate Theoretical

Sulfonylureas → see **TABLE 14** p. 1493 (antidiabetic drugs)

glibenclamide · gliclazide · glimepiride · glipizide · tolbutamide

- Anti-androgens **(darolutamide)** are predicted to increase the concentration of **glibenclamide.** Moderate Theoretical
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **sulfonylureas.** Use with caution and adjust dose. Moderate Study
- Antifungals, azoles **(fluconazole, miconazole)** are predicted to increase the exposure to **sulfonylureas.** Use with caution and adjust dose. Moderate Study
- Antifungals, azoles **(voriconazole)** are predicted to increase the concentration of **sulfonylureas.** Use with caution and adjust dose. Moderate Study
- Cephalosporins **(ceftobiprole)** are predicted to increase the concentration of **glibenclamide.** Moderate Theoretical
- **Ceritinib** is predicted to increase the exposure to **glimepiride.** Adjust dose. Moderate Theoretical
- **Chloramphenicol** is predicted to increase the exposure to **sulfonylureas.** Severe Study
- **Elexacaftor** is predicted to increase the exposure to **glibenclamide.** Moderate Theoretical
- Endothelin receptor antagonists **(bosentan)** increase the risk of hepatotoxicity when given with **glibenclamide.** Avoid. Severe Study
- **Fenfluramine** might decrease blood glucose concentrations when given with **sulfonylureas.** Moderate Theoretical
- **Fibrates** are predicted to increase the risk of hypoglycaemia when given with **sulfonylureas.** Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **glibenclamide.** Moderate Study
- **Letermovir** is predicted to increase the concentration of **glibenclamide.** Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to slightly increase the exposure to **sulfonylureas.** Moderate Theoretical
- **Metreleptin** is predicted to increase the risk of hypoglycaemia when given with **sulfonylureas.** Monitor blood glucose and adjust dose. Severe Theoretical
- **Mifepristone** is predicted to increase the exposure to sulfonylureas **(glimepiride, tolbutamide).** Moderate Theoretical
- **Nitisinone** is predicted to increase the exposure to sulfonylureas **(glimepiride, tolbutamide).** Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **sulfonylureas.** Moderate Study
- **Roxadustat** is predicted to increase the exposure to **glibenclamide.** Monitor adverse effects and adjust dose. Moderate Study
- Statins **(fluvastatin)** slightly increase the exposure to **glibenclamide.** Mild Study
- **Sulfonamides** are predicted to increase the exposure to **sulfonylureas.** Moderate Study
- Taxanes **(cabazitaxel)** are predicted to affect the exposure to **glibenclamide.** Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel.** Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **glibenclamide.** Moderate Study
- **Venetoclax** is predicted to increase the exposure to **glibenclamide.** Moderate Theoretical

Sulindac → see NSAIDs

Sulpiride → see **TABLE 8** p. 1491 (hypotension), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 11** p. 1492 (CNS depressant effects)

- Oral **antacids** decrease the absorption of oral **sulpiride.** Separate administration by 2 hours. Moderate Study
- **Sulpiride** is predicted to decrease the effects of **dopamine receptor agonists.** Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 9** p. 1492
- **Sulpiride** is predicted to decrease the effects of **levodopa.** Avoid. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Sulpiride** potentially increases the risk of neurotoxicity when given with **lithium.** Severe Anecdotal → Also see **TABLE 9** p. 1492
- **Sucralfate** decreases the absorption of **sulpiride.** Separate administration by 2 hours. Moderate Study

Sumatriptan → see triptans

Sunitinib → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 4** p. 1490 (antiplatelet effects)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **sunitinib.** Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **sunitinib.** Moderate Study → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **sunitinib.** Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **sunitinib.** Moderate Study → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **sunitinib.** Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study → Also see **TABLE 9** p. 1492
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **sunitinib.** Moderate Study
- **Cobicistat** is predicted to increase the exposure to **sunitinib.** Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **sunitinib.** Moderate Study → Also see **TABLE 9** p. 1492
- **Dabrafenib** is predicted to decrease the exposure to **sunitinib.** Moderate Study
- **Elbasvir** is predicted to increase the concentration of **sunitinib.** Use with caution and adjust dose. Moderate Theoretical

Sunitinib (continued)

- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **sunitinib**. Moderate Study
- **Grapefruit** juice is predicted to increase the exposure to **sunitinib**. Avoid. Moderate Theoretical
- **Grazoprevir** is predicted to increase the concentration of **sunitinib**. Use with caution and adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study
- **Imatinib** is predicted to increase the exposure to **sunitinib**. Moderate Study → Also see **TABLE 15** p. 1493 → Also see **TABLE 4** p. 1490
- **Letermovir** is predicted to increase the exposure to **sunitinib**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study → Also see **TABLE 9** p. 1492
- Macrolides **(erythromycin)** are predicted to increase the exposure to **sunitinib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Mitotane** is predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study → Also see **TABLE 15** p. 1493
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **sunitinib**. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **sunitinib**. Moderate Study → Also see **TABLE 15** p. 1493 → Also see **TABLE 9** p. 1492
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **sunitinib**. Moderate Study → Also see **TABLE 9** p. 1492
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **sunitinib**. Avoid or adjust **sunitinib** dose, p. 1080. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **sunitinib**. Moderate Study
- **Sunitinib** has been reported to cause hypothyroidism when given with thyroid hormones **(levothyroxine)**. Moderate Anecdotal

Suxamethonium → see **TABLE 6** p. 1491 (bradycardia), **TABLE 20** p. 1494 (neuromuscular blocking effects)

- Alkylating agents **(cyclophosphamide)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Moderate Study
- Antiarrhythmics **(lidocaine)** are predicted to increase the effects of **suxamethonium**. Moderate Study
- **Anticholinesterases, centrally acting** increase the effects of **suxamethonium**. Moderate Theoretical → Also see **TABLE 6** p. 1491
- Antiepileptics **(carbamazepine)** increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** increase the effects of **suxamethonium**. Moderate Study
- **Clindamycin** increases the effects of **suxamethonium**. Severe Anecdotal
- **Corticosteroids** are predicted to decrease the effects of **suxamethonium**. Severe Anecdotal
- **Suxamethonium** is predicted to increase the risk of cardiovascular adverse effects when given with **digoxin**. Severe Anecdotal → Also see **TABLE 6** p. 1491
- **Irinotecan** is predicted to increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Moderate Theoretical
- Intravenous **magnesium** is predicted to increase the effects of **suxamethonium**. Moderate Study
- **Metoclopramide** increases the effects of **suxamethonium**. Moderate Study
- Penicillins **(piperacillin)** increase the effects of **suxamethonium**. Moderate Study
- **SSRIs** potentially increase the risk of prolonged neuromuscular blockade when given with **suxamethonium**. Unknown Theoretical

Sympathomimetics, inotropic

dobutamine • dopamine

- **Sympathomimetics, inotropic** are predicted to decrease the effects of **apraclonidine**. Avoid. Severe Theoretical
- **Beta blockers, non-selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. Severe Theoretical
- **Beta blockers, selective** increase the risk of hypertension and bradycardia when given with **dobutamine**. Moderate Theoretical
- **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. Moderate Theoretical
- **Ergometrine** potentially increases the risk of peripheral vasoconstriction when given with **dopamine**. Avoid. Severe Anecdotal
- **Sympathomimetics, inotropic** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. Severe Anecdotal
- **Sympathomimetics, inotropic** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. Severe Theoretical
- **Tolcapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. Moderate Theoretical

Sympathomimetics, vasoconstrictor

adrenaline/epinephrine • ephedrine • isometheptene • metaraminol • midodrine • noradrenaline/norepinephrine • phenylephrine • pseudoephedrine • xylometazoline

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application of **phenylephrine** and **xylometazoline**, the possibility of interactions should be borne in mind.

- **Ephedrine** increases the risk of adverse effects when given with **aminophylline**. Avoid in children. Moderate Study
- **Sympathomimetics, vasoconstrictor** are predicted to decrease the effects of **apraclonidine**. Avoid. Severe Theoretical
- **Atropine** increases the risk of severe hypertension when given with **phenylephrine**. Severe Study
- **Beta blockers, non-selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Severe Study
- **Beta blockers, selective** are predicted to increase the risk of hypertension and bradycardia when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Severe Study
- **Isometheptene** potentially increases the risk of adverse effects when given with dopamine receptor agonists **(bromocriptine)**. Avoid. Severe Anecdotal
- **Entacapone** is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Moderate Study
- **Ergometrine** is predicted to increase the risk of peripheral vasoconstriction when given with **noradrenaline/norepinephrine**. Severe Anecdotal
- **Pseudoephedrine** increases the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Study
- Sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, ephedrine, isometheptene, noradrenaline/norepinephrine, phenylephrine)** are predicted to increase the risk of elevated blood pressure when given with **linezolid**. Avoid. Severe Theoretical
- **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAO-B inhibitors**. Avoid. Severe Anecdotal
- **Sympathomimetics, vasoconstrictor** are predicted to increase the risk of a hypertensive crisis when given with **MAOIs,**

irreversible. Avoid and for 14 days after stopping the MAOI. Severe Study

- **Mianserin** decreases the effects of **ephedrine**. Severe Anecdotal
- Sympathomimetics, vasoconstrictor **(ephedrine, isometheptene, phenylephrine, pseudoephedrine)** are predicted to increase the risk of a hypertensive crisis when given with **moclobemide**. Avoid. Severe Study
- **Opicapone** is predicted to increase the risk of cardiovascular adverse effects when given with sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Severe Theoretical
- **Sympathomimetics, vasoconstrictor** might increase the risk of a hypertensive crisis when given with **ozanimod**. Severe Theoretical
- **Ephedrine** increases the risk of adverse effects when given with **theophylline**. Avoid in children. Moderate Study
- **Tolcapone** is predicted to increase the effects of sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Moderate Theoretical
- **Tricyclic antidepressants** are predicted to decrease the effects of **ephedrine**. Avoid. Severe Study
- **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. Severe Study

Tacalcitol → see vitamin D substances

Tacrolimus → see **TABLE 2** p. 1490 (nephrotoxicity), **TABLE 16** p. 1494 (increased serum potassium)

- Pomelo and pomegranate juices might greatly increase the concentration of tacrolimus.
- Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Tacrolimus** is predicted to increase the exposure to **afatinib**. Moderate Theoretical
- **Alcohol** increases the risk of facial flushing and skin irritation when given with topical **tacrolimus**. Moderate Study
- Anti-androgens **(apalutamide, enzalutamide)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the concentration of **tacrolimus**. Severe Anecdotal
- Antiarrhythmics **(dronedarone)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Theoretical
- **Baricitinib** is predicted to enhance the risk of immunosuppression when given with **tacrolimus**. Severe Theoretical
- **Berotralstat** is predicted to increase the exposure to **tacrolimus**. Moderate Study
- **Brigatinib** potentially decreases the concentration of **tacrolimus**. Avoid. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- Calcium channel blockers **(nicardipine)** potentially increase the concentration of **tacrolimus**. Monitor concentration and adjust dose. Severe Anecdotal
- **Ceritinib** is predicted to increase the exposure to **tacrolimus**. Avoid. Severe Theoretical
- **Chloramphenicol** increases the concentration of **tacrolimus**. Severe Study
- **Ciclosporin** increases the concentration of **tacrolimus**. Avoid. Severe Study → Also see **TABLE 2** p. 1490 → Also see **TABLE 16** p. 1494
- **Cobicistat** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Crizotinib** is predicted to increase the concentration of **tacrolimus**. Severe Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the concentration of **tacrolimus** and **tacrolimus** potentially increases the concentration of endothelin receptor antagonists **(bosentan)**. Avoid. Severe Theoretical
- **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tacrolimus**. Avoid. Severe Theoretical
- **Glecaprevir** with pibrentasvir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. Mild Study
- **Grapefruit** juice greatly increases the concentration of **tacrolimus**. Avoid. Severe Study
- **Grazoprevir** increases the exposure to **tacrolimus**. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Idelalisib** is predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Imatinib** is predicted to increase the concentration of **tacrolimus**. Severe Study
- Iron chelators **(dexrazoxane)** might increase the risk of immunosuppression when given with **tacrolimus**. Severe Theoretical
- **Ivacaftor** is predicted to increase the exposure to **tacrolimus**. Moderate Theoretical
- **Larotrectinib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. Mild Theoretical
- **Letermovir** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tacrolimus**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Tacrolimus** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **tacrolimus**. Avoid. Moderate Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **tacrolimus**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- **Tacrolimus** is predicted to affect the efficacy of **mifamurtide**. Avoid. Severe Theoretical
- **Mitotane** decreases the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- Monoclonal antibodies **(sarilumab)** potentially affect the exposure to **tacrolimus**. Monitor and adjust dose. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the concentration of **tacrolimus**. Severe Study
- **Nilotinib** is predicted to increase the concentration of **tacrolimus**. Severe Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **tacrolimus**. Severe Theoretical
- NNRTIs **(doravirine)** are predicted to decrease the exposure to **tacrolimus**. Monitor **tacrolimus** concentration and adjust dose, p. 907. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **tacrolimus**. Monitor and adjust dose. Moderate Theoretical
- **Olaparib** might alter the exposure to **tacrolimus**. Moderate Theoretical
- **Palbociclib** is predicted to increase the exposure to **tacrolimus**. Adjust dose. Moderate Theoretical
- **Pibrentasvir** with glecaprevir slightly increases the exposure to **tacrolimus**. Monitor and adjust dose. Mild Study

Tacrolimus (continued)

- **Pitolisant** is predicted to decrease the exposure to **tacrolimus**. Avoid. Severe Theoretical
- **Ranolazine** increases the concentration of **tacrolimus**. Adjust dose. Severe Anecdotal
- **Ribociclib** is predicted to increase the exposure to **tacrolimus**. Use with caution and adjust dose. Moderate Theoretical
- Rifamycins **(rifampicin)** decrease the concentration of **tacrolimus**. Monitor and adjust dose. Severe Study
- **Rucaparib** is predicted to increase the exposure to **tacrolimus**. Monitor and adjust dose. Moderate Study
- **Sirolimus** is predicted to decrease the concentration of **tacrolimus** and **tacrolimus** increases the exposure to **sirolimus**. Severe Study
- **Tacrolimus** potentially increases the risk of serotonin syndrome when given with SNRIs **(venlafaxine)**. Severe Anecdotal
- **St John's wort** decreases the concentration of **tacrolimus**. Avoid. Severe Study
- **Tacrolimus** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Avoid. Severe Theoretical
- **Tigecycline** has been reported to increase the concentration of **tacrolimus**. Severe Anecdotal
- **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. Severe Study
- **Tucatinib** is predicted to increase the exposure to **tacrolimus**. Avoid or adjust dose. Moderate Theoretical

Tadalafil → see phosphodiesterase type-5 inhibitors

Tafasitamab → see monoclonal antibodies

Talazoparib → see **TABLE 15** p. 1493 (myelosuppression)

- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- Antiarrhythmics **(propafenone)** are predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Berotralstat** is predicted to increase the concentration of **talazoparib**. Monitor and adjust dose. Moderate Study
- Beta blockers, non-selective **(carvedilol)** cause a small increase in the bioavailability of **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Moderate Study
- Calcium channel blockers **(diltiazem, felodipine)** very slightly increase the exposure to **talazoparib**. Moderate Study
- Calcium channel blockers **(verapamil)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Ciclosporin** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Cobicistat** is predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Moderate Theoretical
- **Eltrombopag** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. Moderate Theoretical
- HIV-protease inhibitors **(darunavir, tipranavir)** are predicted to increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Moderate Theoretical
- HIV-protease inhibitors **(lopinavir, ritonavir)** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Ibrutinib** is predicted to increase the exposure to **talazoparib**. Separate administration by at least 6 hours. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Ivacaftor** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Lapatinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Leflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Lorlatinib** is predicted to decrease the exposure to **talazoparib**. Moderate Study
- **Macrolides** are predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Neratinib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Olaparib** might increase the exposure to **talazoparib**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Osimertinib** is predicted to increase the exposure to **talazoparib**. Moderate Study
- **Ranolazine** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Rucaparib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study → Also see **TABLE 15** p. 1493
- **Sotorasib** is predicted to increase the exposure to **talazoparib**. Avoid or adjust dose. Moderate Study
- SSRIs **(fluvoxamine)** very slightly increase the exposure to **talazoparib**. Moderate Study
- Statins **(atorvastatin)** very slightly increase the exposure to **talazoparib**. Moderate Study
- **Tepotinib** is predicted to increase the concentration of **talazoparib**. Severe Study
- **Teriflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **talazoparib**. Use with caution and adjust dose. Moderate Theoretical
- **Vandetanib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study

Tamoxifen → see **TABLE 5** p. 1491 (thromboembolism)

- **Tamoxifen** (high-dose) might increase the concentration of antiepileptics **(fosphenytoin)** and antiepileptics **(fosphenytoin)** might decrease the concentration of **tamoxifen** (high-dose). Severe Theoretical
- **Tamoxifen** (high-dose) might increase the concentration of antiepileptics **(phenytoin)** and antiepileptics **(phenytoin)** might decrease the concentration of **tamoxifen** (high-dose). Severe Anecdotal
- **Bupropion** is predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Cinacalcet** is predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Tamoxifen** increases the anticoagulant effect of **coumarins**. Severe Study
- Rifamycins **(rifampicin)** markedly decrease the exposure to **tamoxifen**. Unknown Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study

Tamsulosin → see alpha blockers

Tapentadol → see opioids

Taxanes → see **TABLE 15** p. 1493 (myelosuppression), **TABLE 12** p. 1493 (peripheral neuropathy)

cabazitaxel · docetaxel · paclitaxel

- **Cabazitaxel** is predicted to affect the exposure to angiotensin-II receptor antagonists **(valsartan)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. Moderate Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **docetaxel**. Severe Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **paclitaxel**. Avoid. Severe Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **docetaxel**. Severe Study

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)** (oral). Unknown Theoretical → Also see **TABLE 12** p. 1493
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. Moderate Study → Also see **TABLE 12** p. 1493
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **docetaxel**. Severe Theoretical → Also see **TABLE 12** p. 1493
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **paclitaxel**. Avoid. Severe Study → Also see **TABLE 12** p. 1493
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **docetaxel**. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. Severe Study
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **docetaxel**. Use with caution and adjust dose. Moderate Theoretical
- **Cabazitaxel** is predicted to affect the exposure to antihistamines, non-sedating **(fexofenadine)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. Moderate Theoretical
- **Berotralstat** is predicted to increase the concentration of taxanes **(docetaxel, paclitaxel)**. Monitor and adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **docetaxel**. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal
- **Ceritinib** is predicted to increase the exposure to **paclitaxel**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Ciclosporin** increases the concentration of taxanes **(docetaxel, paclitaxel)** (oral). Unknown Study
- **Clopidogrel** is predicted to increase the concentration of **paclitaxel**. Severe Anecdotal
- **Cobicistat** is predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. Severe Study
- **Cobicistat** is predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. Severe Study
- **Cobicistat** is predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal
- **Crizotinib** is predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **docetaxel**. Severe Study
- **Crizotinib** is predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal
- **Dabrafenib** is predicted to decrease the exposure to **cabazitaxel**. Moderate Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **docetaxel**. Severe Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **paclitaxel**. Avoid. Severe Study
- **Eliglustat** is predicted to increase the exposure to **paclitaxel**. Adjust dose. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **cabazitaxel**. Moderate Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **docetaxel**. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **paclitaxel**. Avoid. Severe Study
- Fibrates **(gemfibrozil)** are predicted to increase the concentration of **paclitaxel**. Severe Anecdotal
- **HIV-protease inhibitors** are predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal
- **Ibrutinib** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)**. Separate administration by at least 6 hours. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Idelalisib** is predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. Severe Study
- **Idelalisib** is predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. Severe Study
- **Idelalisib** is predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal
- **Imatinib** is predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Imatinib** is predicted to increase the exposure to **docetaxel**. Severe Study → Also see **TABLE 15** p. 1493
- **Imatinib** is predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal → Also see **TABLE 15** p. 1493
- Iron chelators **(deferasirox)** are predicted to increase the concentration of **paclitaxel**. Severe Anecdotal
- **Ivacaftor** is predicted to increase the exposure to **docetaxel** (oral). Unknown Theoretical
- **Ivacaftor** is predicted to increase the exposure to **paclitaxel** (oral). Unknown Study
- **Lapatinib** slightly increases the exposure to **paclitaxel**. Severe Study
- **Leflunomide** is predicted to increase the concentration of **paclitaxel**. Severe Anecdotal → Also see **TABLE 15** p. 1493
- **Letermovir** is predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **docetaxel**. Severe Study
- **Letermovir** is predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with taxanes **(docetaxel, paclitaxel)**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **paclitaxel**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **cabazitaxel**. Avoid or monitor—consult product literature. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **docetaxel**. Avoid or adjust dose. Severe Study
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal
- Macrolides **(erythromycin)** are predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **docetaxel**. Severe Study
- Macrolides **(azithromycin)** are predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)** (oral). Unknown Theoretical
- **Cabazitaxel** is predicted to affect the exposure to meglitinides **(repaglinide)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. Moderate Theoretical
- **Mirabegron** is predicted to increase the exposure to **paclitaxel**. Mild Theoretical
- **Mitotane** is predicted to decrease the exposure to **cabazitaxel**. Avoid. Moderate Study → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **docetaxel**. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **paclitaxel**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- **Neratinib** is predicted to increase the exposure to **docetaxel** (oral). Unknown Theoretical

Taxanes (continued)

- **Neratinib** is predicted to increase the exposure to **paclitaxel** (oral). Unknown Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **docetaxel**. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal
- **Nilotinib** is predicted to increase the exposure to **cabazitaxel**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to **docetaxel**. Severe Study → Also see **TABLE 15** p. 1493
- **Nilotinib** is predicted to increase the exposure to **paclitaxel**. Moderate Anecdotal → Also see **TABLE 15** p. 1493
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **cabazitaxel**. Moderate Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **docetaxel**. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **paclitaxel**. Avoid. Severe Study
- **Olaparib** might increase the exposure to taxanes **(docetaxel, paclitaxel)**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Osimertinib** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)**. Moderate Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **paclitaxel**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **docetaxel**. Avoid. Severe Theoretical
- **Pitolisant** is predicted to decrease the exposure to **paclitaxel**. Mild Theoretical
- **Ranolazine** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)** (oral). Unknown Theoretical
- Rifamycins **(rifabutin)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **cabazitaxel**. Avoid. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **docetaxel**. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **paclitaxel**. Avoid. Severe Study
- **Rucaparib** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)** (oral). Unknown Theoretical → Also see **TABLE 15** p. 1493
- **Selpercatinib** is predicted to increase the exposure to **paclitaxel**. Avoid. Moderate Study
- **Sotorasib** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)**. Avoid or adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **cabazitaxel**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **docetaxel**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **paclitaxel**. Avoid. Severe Study
- **Cabazitaxel** is predicted to affect the exposure to statins **(atorvastatin, pravastatin, rosuvastatin, simvastatin)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. Moderate Theoretical
- **Cabazitaxel** is predicted to affect the exposure to sulfonylureas **(glibenclamide)**. Manufacturer advises take 12 hours before or 3 hours after **cabazitaxel**. Moderate Theoretical
- **Tepotinib** is predicted to increase the concentration of taxanes **(docetaxel, paclitaxel)** (oral). Severe Study
- **Teriflunomide** is predicted to increase the concentration of **paclitaxel**. Severe Anecdotal
- **Tucatinib** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)**. Use with caution and adjust dose. Moderate Theoretical
- **Vandetanib** is predicted to increase the exposure to **docetaxel** (oral). Unknown Theoretical
- **Vandetanib** is predicted to increase the exposure to **paclitaxel** (oral). Unknown Study
- **Velpatasvir** is predicted to increase the exposure to **paclitaxel**. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **docetaxel** (oral). Unknown Theoretical
- **Vemurafenib** is predicted to increase the exposure to **paclitaxel** (oral). Use with caution and adjust dose. Unknown Theoretical

Tazarotene → see retinoids

Tedizolid

- **Tedizolid** is predicted to increase the exposure to **imatinib**. Avoid. Moderate Theoretical
- **Tedizolid** is predicted to increase the exposure to **lapatinib**. Avoid. Moderate Theoretical
- **Tedizolid** is predicted to increase the exposure to **methotrexate**. Avoid. Moderate Theoretical
- **Tedizolid** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, rosuvastatin)**. Avoid. Moderate Study
- **Tedizolid** is predicted to increase the exposure to **sulfasalazine**. Avoid. Moderate Study
- **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. Moderate Study

Tegafur → see **TABLE 15** p. 1493 (myelosuppression)

- **Tegafur** potentially increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Monitor concentration and adjust dose. Severe Anecdotal
- **Tegafur** increases the anticoagulant effect of **coumarins**. Moderate Theoretical
- **Folates** are predicted to increase the risk of toxicity when given with **tegafur**. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** are predicted to increase the risk of toxicity when given with **tegafur**. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tegafur**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Methotrexate** is predicted to increase the risk of toxicity when given with **tegafur**. Severe Theoretical → Also see **TABLE 15** p. 1493

Teicoplanin

GENERAL INFORMATION If other nephrotoxic or neurotoxic drugs are given, monitor renal and auditory function on prolonged administration.

Telmisartan → see angiotensin-II receptor antagonists

Telotristat ethyl

- **Telotristat ethyl** decreases the exposure to benzodiazepines **(midazolam)**. Moderate Study
- **Telotristat ethyl** is predicted to decrease the exposure to NNRTIs **(doravirine)**. Avoid or adjust doravirine p. 699 or lamivudine with tenofovir disoproxil and doravirine p. 709 dose. Severe Theoretical
- **Octreotide** (short-acting) decreases the exposure to **telotristat ethyl**. **Telotristat ethyl** should be taken at least 30 minutes before **octreotide**. Moderate Study

Temazepam → see benzodiazepines

Temocillin → see penicillins

Temozolomide → see alkylating agents

Temsirolimus → see **TABLE 15** p. 1493 (myelosuppression)

- **ACE inhibitors** are predicted to increase the risk of angioedema when given with **temsirolimus**. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Berotralstat** is predicted to increase the exposure to **temsirolimus**. Use with caution or avoid. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the concentration of and the risk of angioedema

when given with **temsirolimus**. Use with caution or avoid. Moderate Theoretical

- **Temsirolimus** is predicted to increase the risk of angioedema when given with calcium channel blockers **(amlodipine, felodipine, lacidipine, lercanidipine, nicardipine, nifedipine, nimodipine)**. Moderate Theoretical
- **Cenobamate** is predicted to decrease the exposure to oral **temsirolimus**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Crizotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical
- **Dabrafenib** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Entrectinib** is predicted to increase the exposure to **temsirolimus**. Mild Theoretical
- **Fedratinib** is predicted to increase the exposure to **temsirolimus** (oral). Monitor and adjust dose. Moderate Theoretical
- **Grapefruit** juice is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Idelalisib** is predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Imatinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **temsirolimus**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Lumacaftor** is predicted to decrease the exposure to **temsirolimus**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the concentration of **temsirolimus**. Avoid. Severe Theoretical
- Macrolides **(erythromycin)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical
- **Mifepristone** is predicted to increase the exposure to oral **temsirolimus**. Severe Theoretical
- **Mitotane** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study → Also see **TABLE 15** p. 1493
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical
- **Nilotinib** is predicted to increase the concentration of **temsirolimus**. Use with caution or avoid. Moderate Theoretical → Also see **TABLE 15** p. 1493
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical
- **Olaparib** might alter the exposure to **temsirolimus**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Pitolisant** is predicted to decrease the exposure to **temsirolimus**. Avoid. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Study
- **Selpercatinib** is predicted to increase the exposure to **temsirolimus**. Moderate Study
- **Sotorasib** is predicted to decrease the exposure to **temsirolimus**. Avoid or adjust dose. Moderate Theoretical
- **St John's wort** is predicted to decrease the concentration of **temsirolimus**. Avoid. Severe Theoretical

Tenecteplase → see **TABLE 3** p. 1490 (anticoagulant effects)

Tenofovir alafenamide

- Antiepileptics **(carbamazepine, fosphenytoin, oxcarbazepine, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **tenofovir alafenamide**. Moderate Theoretical
- **Eltrombopag** is predicted to increase the exposure to **tenofovir alafenamide**. Moderate Theoretical
- **Fostemsavir** is predicted to increase the exposure to **tenofovir alafenamide**. Adjust dose—consult product literature. Moderate Theoretical
- HIV-protease inhibitors **(atazanavir, darunavir, lopinavir)** increase the exposure to **tenofovir alafenamide**. Avoid or adjust dose. Moderate Study
- HIV-protease inhibitors **(tipranavir)** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. Moderate Theoretical
- **Rifamycins** are predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **tenofovir alafenamide**. Avoid. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. Moderate Theoretical

Tenofovir disoproxil → see **TABLE 2** p. 1490 (nephrotoxicity)

- **Ciclosporin** is predicted to increase the exposure to **tenofovir disoproxil**. Moderate Theoretical → Also see **TABLE 2** p. 1490
- **Eltrombopag** is predicted to increase the exposure to **tenofovir disoproxil**. Moderate Theoretical
- HIV-protease inhibitors **(atazanavir, darunavir, lopinavir)** are predicted to increase the risk of renal impairment when given with **tenofovir disoproxil**. Severe Anecdotal
- **Ledipasvir** with sofosbuvir slightly increases the exposure to **tenofovir disoproxil**. Moderate Study
- **Leflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. Moderate Theoretical
- **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. Severe Study
- **Voxilaprevir** with sofosbuvir and velpatasvir potentially increases the concentration of **tenofovir disoproxil**. Severe Study

Tenoxicam → see NSAIDs

Tepotinib

- **Tepotinib** is predicted to increase the concentration of **aliskiren**. Severe Study
- Anti-androgens **(apalutamide, enzalutamide)** might decrease the exposure to **tepotinib**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** might decrease the exposure to **tepotinib**. Avoid. Severe Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** might increase the exposure to **tepotinib**. Avoid. Severe Theoretical
- **Tepotinib** is predicted to increase the concentration of antihistamines, non-sedating **(fexofenadine)**. Severe Study
- **Tepotinib** is predicted to increase the concentration of **colchicine**. Severe Study
- **Tepotinib** is predicted to increase the concentration of **digoxin**. Severe Study
- **Tepotinib** is predicted to increase the concentration of **everolimus**. Severe Study
- **Tepotinib** is predicted to increase the concentration of factor XA inhibitors **(edoxaban, rivaroxaban)**. Severe Study
- HIV-protease inhibitors **(lopinavir)** boosted with ritonavir might increase the exposure to **tepotinib**. Avoid. Severe Theoretical
- HIV-protease inhibitors **(ritonavir)** might increase the exposure to **tepotinib**. Avoid. Severe Theoretical
- **Tepotinib** is predicted to increase the concentration of **loperamide**. Severe Study
- Macrolides **(clarithromycin)** might increase the exposure to **tepotinib**. Avoid. Severe Theoretical
- **Mitotane** might decrease the exposure to **tepotinib**. Avoid. Severe Theoretical
- Rifamycins **(rifampicin)** might decrease the exposure to **tepotinib**. Avoid. Severe Theoretical
- **Tepotinib** is predicted to increase the concentration of **sirolimus**. Severe Study
- **Tepotinib** might decrease the exposure to **St John's wort**. Avoid. Severe Theoretical

Tepotinib (continued)

- **Tepotinib** might increase the exposure to statins **(atorvastatin, fluvastatin, rosuvastatin)**. Moderate Theoretical
- **Tepotinib** might increase the exposure to **sulfasalazine**. Severe Theoretical
- **Tepotinib** is predicted to increase the concentration of **talazoparib**. Severe Study
- **Tepotinib** is predicted to increase the concentration of taxanes **(docetaxel, paclitaxel)** (oral). Severe Study
- **Tepotinib** slightly increases the exposure to thrombin inhibitors **(dabigatran)**. Severe Study
- **Tepotinib** is predicted to increase the concentration of **topotecan**. Severe Study

Terazosin → see alpha blockers

Terbinafine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions should be borne in mind.

- **Terbinafine** is predicted to increase the exposure to anticholinesterases, centrally acting **(galantamine)**. Monitor and adjust dose. Moderate Study
- **Terbinafine** is predicted to moderately increase the exposure to antipsychotics, second generation **(aripiprazole)**. Adjust **aripiprazole** dose, p. 427. Moderate Study
- **Terbinafine** is predicted to increase the exposure to antipsychotics, second generation **(risperidone)**. Adjust dose. Moderate Study
- **Terbinafine** is predicted to markedly increase the exposure to **atomoxetine**. Adjust dose. Severe Study
- **Terbinafine** is predicted to increase the exposure to beta blockers, selective **(metoprolol, nebivolol)**. Moderate Study
- **Terbinafine** is predicted to slightly increase the exposure to **darifenacin**. Mild Study
- **Terbinafine** is predicted to increase the exposure to **eliglustat**. Avoid or adjust dose—consult product literature. Severe Study
- **Terbinafine** is predicted to increase the exposure to **fesoterodine**. Use with caution and adjust dose. Mild Theoretical
- **Terbinafine** is predicted to increase the exposure to **gefitinib**. Moderate Theoretical
- **Terbinafine** is predicted to increase the exposure to **mexiletine**. Moderate Study
- **Terbinafine** is predicted to decrease the efficacy of opioids **(codeine)**. Moderate Theoretical
- **Terbinafine** is predicted to decrease the efficacy of opioids **(tramadol)**. Severe Study
- **Terbinafine** is predicted to moderately increase the exposure to **pitolisant**. Use with caution and adjust dose. Moderate Study
- Rifamycins **(rifampicin)** decrease the exposure to **terbinafine**. Adjust dose. Moderate Study
- **Terbinafine** is predicted to increase the exposure to SSRIs **(citalopram, dapoxetine, escitalopram, fluvoxamine, sertraline)**. Moderate Theoretical
- **Terbinafine** is predicted to increase the exposure to SSRIs **(fluoxetine)**. Adjust dose. Moderate Theoretical
- **Terbinafine** moderately increases the exposure to SSRIs **(paroxetine)**. Moderate Study
- **Terbinafine** is predicted to decrease the efficacy of **tamoxifen**. Avoid. Severe Study
- **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. Moderate Study
- **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study
- **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study

Terbutaline → see beta$_2$ agonists

Teriflunomide → see **TABLE 1** p. 1490 (hepatotoxicity)

- **Teriflunomide** is predicted to increase the exposure to **adefovir**. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to **agomelatine**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **alpelisib**. Moderate Theoretical
- **Teriflunomide** decreases the exposure to **aminophylline**. Adjust dose. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to anthracyclines **(daunorubicin, doxorubicin, mitoxantrone)**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to antipsychotics, second generation **(clozapine)**. Moderate Theoretical
- **Teriflunomide** is predicted to decrease the exposure to antipsychotics, second generation **(olanzapine)**. Monitor and adjust dose. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **baricitinib**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **berotralstat**. Severe Theoretical
- **Teriflunomide** is predicted to moderately increase the clearance of **caffeine citrate**. Monitor and adjust dose. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to cephalosporins **(cefaclor)**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **cladribine**. Avoid or adjust dose. Moderate Theoretical
- **Teriflunomide** affects the anticoagulant effect of **coumarins**. Severe Study
- **Teriflunomide** is predicted to increase the exposure to endothelin receptor antagonists **(bosentan)**. Moderate Study
- **Filgotinib** is predicted to increase the risk of immunosuppression when given with **teriflunomide**. Avoid. Severe Theoretical
- **Teriflunomide** is predicted to increase the exposure to **ganciclovir**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to H_2 receptor antagonists **(cimetidine, famotidine)**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **larotrectinib**. Mild Study
- **Teriflunomide** is predicted to increase the concentration of **letermovir**. Moderate Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **teriflunomide**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Teriflunomide** is predicted to increase the exposure to loop diuretics **(furosemide)**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to meglitinides **(repaglinide)**. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to **melatonin**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **methotrexate**. Moderate Study → Also see **TABLE 1** p. 1490
- **Teriflunomide** is predicted to increase the clearance of **mexiletine**. Monitor and adjust dose. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **montelukast**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to NRTIs **(zidovudine)**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to NSAIDs **(indometacin, ketoprofen)**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **oseltamivir**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to the active metabolites of **ozanimod**. Avoid. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to penicillins **(benzylpenicillin)**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **pioglitazone**. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to **pirfenidone**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to quinolones **(ciprofloxacin)**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to rifamycins **(rifampicin)**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **selexipag**. Adjust **selexipag** dose, p. 198. Moderate Study

- **Teriflunomide** is predicted to decrease the exposure to SNRIs **(duloxetine)**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to statins **(atorvastatin, fluvastatin, pravastatin, simvastatin)**. Moderate Study → Also see TABLE 1 p. 1490
- **Teriflunomide** moderately increases the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose, p. 221. Moderate Study → Also see TABLE 1 p. 1490
- **Teriflunomide** is predicted to increase the exposure to **sulfasalazine**. Moderate Study → Also see TABLE 1 p. 1490
- **Teriflunomide** is predicted to increase the exposure to sulfonylureas **(glibenclamide)**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **talazoparib**. Avoid or monitor. Moderate Theoretical
- **Teriflunomide** is predicted to increase the concentration of taxanes **(paclitaxel)**. Severe Anecdotal
- **Teriflunomide** is predicted to increase the exposure to **tenofovir alafenamide**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **tenofovir disoproxil**. Moderate Theoretical
- **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Teriflunomide** moderately decreases the exposure to **tizanidine**. Mild Study
- **Teriflunomide** is predicted to increase the exposure to **topotecan**. Moderate Study
- **Teriflunomide** is predicted to increase the exposure to **tucatinib**. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical

Tetanus immunoglobulin → see immunoglobulins

Tetrabenazine → see TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)

- **Bupropion** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. Moderate Study
- **Cinacalcet** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. Moderate Study
- **Tetrabenazine** is predicted to decrease the effects of **levodopa**. Use with caution or avoid. Moderate Theoretical
- **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAO-B inhibitors**. Severe Theoretical
- **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical
- **Tetrabenazine** potentially increases the risk of CNS excitation and hypertension when given with **moclobemide**. Severe Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to the active metabolite of **tetrabenazine**. Moderate Study
- **Terbinafine** is predicted to increase the exposure to the active metabolite of **tetrabenazine**. Moderate Study

Tetracaine → see anaesthetics, local

Tetracycline → see tetracyclines

Tetracyclines → see TABLE 1 p. 1490 (hepatotoxicity)

demeclocycline · doxycycline · lymecycline · minocycline · oxytetracycline · tetracycline

- Dairy products decrease the absorption of **demeclocycline** and **oxytetracycline**.
- Interactions do not generally apply to topical use of **oxytetracycline** unless specified.
- Dairy products decrease the exposure to **tetracycline**—manufacturer advises take 1 hour before or 2 hours after dairy products.

- Oral ACE inhibitors **(quinapril)** (magnesium carbonate-containing forms) might decrease the absorption of oral **tetracyclines**. Avoid. Moderate Study
- Oral **antacids** greatly decrease the absorption of oral **tetracyclines**. Separate administration by 2 to 3 hours. Moderate Study
- Antiepileptics **(carbamazepine, phenobarbital, phenytoin, primidone)** decrease the concentration of **doxycycline**. Adjust dose. Moderate Study → Also see TABLE 1 p. 1490
- Antiepileptics **(fosphenytoin)** are predicted to decrease the concentration of **doxycycline**. Adjust dose. Moderate Theoretical
- **Tetracycline** decreases the concentration of antimalarials **(atovaquone)**. Moderate Study
- **Bismuth** greatly decreases the efficacy of **tetracyclines**. Separate administration by 2 hours. Moderate Study
- Calcium salts **(calcium carbonate)** are predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. Moderate Theoretical
- **Doxycycline** is predicted to increase the concentration of **ciclosporin**. Severe Theoretical
- **Combined hormonal contraceptives** might exacerbate skin pigmentation when given with **minocycline**. Moderate Anecdotal
- **Tetracyclines** increase the anticoagulant effect of **coumarins**. Severe Anecdotal
- Oral **iron** decreases the absorption of oral **tetracyclines**. **Tetracyclines** should be taken 2 to 3 hours after iron. Moderate Study
- Oral **kaolin** is predicted to decrease the absorption of oral **tetracyclines**. Moderate Theoretical
- Oral **lanthanum** might decrease the absorption of oral **tetracyclines**. Separate administration by 2 hours. Moderate Theoretical
- **Tetracyclines** are predicted to increase the risk of lithium toxicity when given with **lithium**. Avoid or adjust dose. Severe Anecdotal
- **Tetracyclines** are predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical
- **Tetracycline** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Theoretical
- Retinoids **(acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tetracyclines**. Avoid. Severe Anecdotal
- Rifamycins **(rifampicin)** modestly decrease the exposure to **doxycycline**. Adjust dose. Moderate Study
- **Strontium** is predicted to decrease the absorption of **tetracyclines**. Avoid. Moderate Theoretical
- Oral **sucralfate** might decrease the absorption of oral **tetracyclines**. Moderate Theoretical
- Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. Moderate Theoretical

Tezacaftor

FOOD AND LIFESTYLE Bitter (Seville) oranges might increase the exposure to tezacaftor.

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **tezacaftor**. Avoid. Severe Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tezacaftor**. Avoid. Severe Theoretical
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Cobicistat** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study

Tezacaftor (continued)
- **Crizotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Grapefruit** juice is predicted to increase the exposure to **tezacaftor**. Avoid. Severe Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Idelalisib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Imatinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Letermovir** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with potent CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Mitotane** is predicted to decrease the exposure to **tezacaftor**. Avoid. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Nilotinib** is predicted to increase the exposure to **tezacaftor**. Adjust dose with moderate CYP3A4 inhibitors, see tezacaftor with ivacaftor p. 319 and tezacaftor with ivacaftor and elexacaftor p. 320. Severe Study
- **Rifamycins** are predicted to decrease the exposure to **tezacaftor**. Avoid. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **tezacaftor**. Avoid. Severe Theoretical

Thalidomide → see **TABLE 6** p. 1491 (bradycardia), **TABLE 15** p. 1493 (myelosuppression), **TABLE 12** p. 1493 (peripheral neuropathy), **TABLE 5** p. 1491 (thromboembolism), **TABLE 11** p. 1492 (CNS depressant effects)
- **Combined hormonal contraceptives** are predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Avoid. Severe Study
- **Hormone replacement therapy** is predicted to increase the risk of venous thromboembolism when given with **thalidomide**. Severe Theoretical

Theophylline → see **TABLE 17** p. 1494 (reduced serum potassium)

FOOD AND LIFESTYLE Smoking can increase theophylline clearance and increased doses of theophylline are therefore required; dose adjustments are likely to be necessary if smoking started or stopped during treatment.

- **Aciclovir** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Severe Theoretical
- **Theophylline** decreases the efficacy of antiarrhythmics **(adenosine)**. Separate administration by 24 hours. Mild Study
- Antiepileptics **(carbamazepine)** potentially increase the clearance of **theophylline** and **theophylline** decreases the exposure to antiepileptics **(carbamazepine)**. Adjust dose. Moderate Anecdotal
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to increase the clearance of **theophylline**. Adjust dose. Moderate Theoretical
- Antiepileptics **(stiripentol)** are predicted to increase the exposure to **theophylline**. Avoid. Moderate Theoretical
- **Axitinib** is predicted to increase the exposure to **theophylline**. Moderate Theoretical
- **Beta blockers, non-selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. Severe Theoretical
- **Beta blockers, selective** are predicted to increase the risk of bronchospasm when given with **theophylline**. Avoid. Severe Theoretical
- **Caffeine citrate** decreases the clearance of **theophylline**. Moderate Study
- **Combined hormonal contraceptives** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Theophylline** increases the risk of agitation when given with **doxapram**. Moderate Study
- **Enteral feeds** decrease the exposure to **theophylline**. Moderate Study
- **Esketamine** is predicted to increase the risk of seizures when given with **theophylline**. Avoid. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** increase the concentration of **theophylline**. Adjust dose. Severe Study
- HIV-protease inhibitors **(ritonavir)** are predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Interferons** slightly increase the exposure to **theophylline**. Adjust dose. Moderate Study
- Iron chelators **(deferasirox)** increase the exposure to **theophylline**. Avoid. Moderate Study
- **Isoniazid** is predicted to affect the clearance of **theophylline**. Severe Anecdotal
- **Leflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Theophylline** is predicted to decrease the concentration of **lithium**. Monitor concentration and adjust dose. Moderate Anecdotal
- Macrolides **(azithromycin, clarithromycin)** are predicted to increase the exposure to **theophylline**. Adjust dose. Moderate Anecdotal
- Macrolides **(erythromycin)** decrease the clearance of **theophylline** and **theophylline** potentially decreases the clearance of macrolides **(erythromycin)**. Adjust dose. Severe Study
- **Methotrexate** decreases the clearance of **theophylline**. Moderate Study
- **Metreleptin** might alter the exposure to **theophylline**. Monitor concentration and adjust dose. Severe Theoretical
- **Mexiletine** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- Monoclonal antibodies **(blinatumomab)** are predicted to transiently increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- Monoclonal antibodies **(sarilumab)** potentially affect the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- Monoclonal antibodies **(tocilizumab)** are predicted to decrease the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to decrease the concentration of **theophylline**. Adjust dose. Moderate Theoretical
- **Obeticholic acid** is predicted to increase the exposure to **theophylline**. Severe Theoretical
- **Osilodrostat** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Pentoxifylline** increases the concentration of **theophylline**. Monitor and adjust dose. Severe Study
- **Theophylline** is predicted to slightly increase the exposure to phosphodiesterase type-4 inhibitors **(roflumilast)**. Avoid. Moderate Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study

- **Rucaparib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- SSRIs **(fluvoxamine)** moderately to markedly increase the exposure to **theophylline**. Avoid. Severe Study
- **St John's wort** potentially decreases the exposure to **theophylline**. Severe Anecdotal
- **Sucralfate** potentially decreases the absorption of **theophylline**. Separate administration by at least 2 hours. Moderate Study
- Sympathomimetics, vasoconstrictor **(ephedrine)** increase the risk of adverse effects when given with **theophylline**. Avoid in children. Moderate Study
- **Teriflunomide** is predicted to decrease the exposure to **theophylline**. Adjust dose. Moderate Study
- **Valaciclovir** is predicted to increase the exposure to **theophylline**. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical

Thiazide diuretics → see **TABLE 18** p. 1494 (hyponatraemia), **TABLE 8** p. 1491 (hypotension), **TABLE 17** p. 1494 (reduced serum potassium)

bendroflumethiazide · chlorothiazide · chlortalidone · hydrochlorothiazide · hydroflumethiazide · indapamide · metolazone · xipamide

- **Thiazide diuretics** are predicted to increase the risk of hypersensitivity reactions when given with **allopurinol**. Severe Theoretical
- **Aspirin** (high-dose) increases the risk of acute renal failure when given with **thiazide diuretics**. Severe Theoretical
- **Thiazide diuretics** increase the risk of hypercalcaemia when given with **calcium salts**. Severe Anecdotal
- **Thiazide diuretics** increase the concentration of **lithium**. Avoid or adjust dose and monitor concentration. Severe Study
- **Metolazone** is predicted to decrease the efficacy of **methenamine**. Moderate Theoretical
- **NSAIDs** increase the risk of acute renal failure when given with **thiazide diuretics**. Severe Theoretical → Also see **TABLE 18** p. 1494
- **Reboxetine** is predicted to increase the risk of hypokalaemia when given with **thiazide diuretics**. Moderate Anecdotal
- **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. Severe Theoretical
- **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. Moderate Theoretical

Thiopental → see **TABLE 8** p. 1491 (hypotension), **TABLE 11** p. 1492 (CNS depressant effects)

- **Sulfonamides** are predicted to increase the effects of **thiopental**. Moderate Theoretical
- **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. Moderate Study → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492

Thiotepa → see alkylating agents

Thrombin inhibitors → see **TABLE 3** p. 1490 (anticoagulant effects)

argatroban · bivalirudin · dabigatran

- **Abrocitinib** slightly increases the exposure to **dabigatran**. Moderate Study
- Anti-androgens **(apalutamide)** are predicted to decrease the exposure to **dabigatran**. Mild Study
- Antiarrhythmics **(amiodarone)** increase the exposure to **dabigatran**. Monitor and adjust dose. Severe Study
- Antiarrhythmics **(dronedarone)** moderately increase the exposure to **dabigatran**. Avoid. Severe Study
- Antiepileptics **(carbamazepine)** are predicted to decrease the exposure to **dabigatran**. Avoid. Severe Study
- Antiepileptics **(phenytoin)** are predicted to decrease the exposure to **dabigatran**. Avoid. Severe Theoretical
- Antifungals, azoles **(fluconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **dabigatran**. Severe Study
- Antifungals, azoles **(isavuconazole)** are predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **dabigatran**. Avoid. Severe Study
- **Berotralstat** is predicted to increase the concentration of **dabigatran**. Monitor and adjust dose. Moderate Study
- Calcium channel blockers **(verapamil)** increase the exposure to **dabigatran**. Monitor and adjust dose. Severe Study
- **Ceritinib** is predicted to increase the exposure to **dabigatran**. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **dabigatran**. Avoid. Severe Study
- **Cobicistat** moderately increases the exposure to **dabigatran**. Avoid. Severe Study
- **Elbasvir** is predicted to increase the concentration of **dabigatran**. Moderate Theoretical
- **Eliglustat** is predicted to increase the exposure to **dabigatran**. Adjust dose. Moderate Study
- **Glecaprevir** with pibrentasvir increases the exposure to **dabigatran**. Avoid. Moderate Study
- HIV-protease inhibitors **(atazanavir, darunavir, lopinavir)** boosted with ritonavir are predicted to increase the exposure to **dabigatran**. Avoid. Severe Anecdotal
- HIV-protease inhibitors **(fosamprenavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **dabigatran**. Avoid. Severe Theoretical
- HIV-protease inhibitors **(ritonavir)** are predicted to increase the exposure to **dabigatran**. Avoid. Severe Study
- **Ibrutinib** is predicted to increase the exposure to **dabigatran**. Separate administration by at least 6 hours. Moderate Theoretical
- **Ivacaftor** is predicted to increase the exposure to **dabigatran**. Moderate Study
- **Lapatinib** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- **Ledipasvir** is predicted to increase the exposure to **dabigatran**. Moderate Theoretical
- **Letermovir** is predicted to decrease the concentration of **dabigatran**. Avoid. Severe Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **dabigatran**. Moderate Study
- Macrolides **(azithromycin, erythromycin)** are predicted to increase the exposure to **dabigatran**. Severe Theoretical
- Macrolides **(clarithromycin)** increase the exposure to **dabigatran**. Moderate Study
- **Mirabegron** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- **Neratinib** is predicted to increase the exposure to **dabigatran**. Moderate Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **dabigatran**. Avoid. Severe Theoretical
- **Olaparib** might increase the exposure to **dabigatran**. Moderate Theoretical
- **Osimertinib** is predicted to increase the exposure to **dabigatran**. Moderate Study
- **Pemigatinib** might increase the exposure to **dabigatran**. Separate administration by at least 6 hours. Moderate Theoretical
- **Pibrentasvir** with glecaprevir increases the exposure to **dabigatran**. Avoid. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **dabigatran**. Mild Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **argatroban**. Severe Theoretical
- **Ranibizumab** is predicted to increase the risk of bleeding events when given with **bivalirudin**. Moderate Theoretical
- **Ranolazine** is predicted to increase the exposure to **dabigatran**. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **dabigatran**. Avoid. Severe Study
- **Sotorasib** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **dabigatran**. Avoid. Severe Study
- **Tacrolimus** is predicted to increase the exposure to **dabigatran**. Avoid. Severe Theoretical
- **Tepotinib** slightly increases the exposure to **dabigatran**. Severe Study

Thrombin inhibitors (continued)
- **Ticagrelor** increases the exposure to **dabigatran**. Monitor and adjust dose. Severe Study
- **Tucatinib** is predicted to increase the exposure to **dabigatran**. Use with caution and adjust dose. Moderate Theoretical
- **Vandetanib** is predicted to increase the exposure to **dabigatran**. Moderate Study
- **Velpatasvir** increases the exposure to **dabigatran**. Avoid. Severe Study
- **Vemurafenib** is predicted to increase the exposure to **dabigatran**. Monitor and adjust dose. Severe Theoretical
- **Venetoclax** is predicted to increase the exposure to **dabigatran**. Avoid or adjust dose. Severe Study
- **Voxilaprevir** with sofosbuvir and velpatasvir increases the concentration of **dabigatran**. Avoid. Severe Study

Thyroid hormones

levothyroxine · liothyronine

FOOD AND LIFESTYLE Food, including dietary fibre, milk, soya products, and coffee, might decrease the absorption of levothyroxine.

- Oral **antacids** are predicted to decrease the absorption of oral **levothyroxine**. Separate administration by at least 4 hours. Moderate Anecdotal
- Anti-androgens **(apalutamide)** potentially decrease the exposure to **levothyroxine**. Mild Theoretical
- Antiarrhythmics **(amiodarone)** are predicted to increase the risk of thyroid dysfunction when given with **thyroid hormones**. Avoid. Moderate Study
- Antiepileptics **(carbamazepine)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** are predicted to increase the risk of hypothyroidism when given with **thyroid hormones**. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the effects of **thyroid hormones**. Moderate Theoretical
- Oral **calcium salts** are predicted to decrease the absorption of **levothyroxine**. Separate administration by at least 4 hours. Moderate Anecdotal
- **Thyroid hormones** are predicted to affect the concentration of **digoxin**. Monitor and adjust dose. Moderate Theoretical
- HIV-protease inhibitors **(ritonavir)** decrease the concentration of **levothyroxine**. MHRA advises monitor TSH for at least one month after starting or stopping ritonavir. Moderate Anecdotal
- Oral **hormone replacement therapy** is predicted to decrease the effects of **thyroid hormones**. Moderate Theoretical
- **Imatinib** causes hypothyroidism when given with **levothyroxine** in thyroidectomy patients. Moderate Study
- Oral **iron** decreases the absorption of oral **levothyroxine**. Separate administration by at least 4 hours. Moderate Study
- **Lanthanum** decreases the absorption of **thyroid hormones**. Separate administration by 2 hours. Moderate Study
- **Nirmatrelvir** boosted with ritonavir might decrease the efficacy of **levothyroxine**. Moderate Theoretical
- **Sucralfate** decreases the absorption of **levothyroxine**. Separate administration by at least 4 hours. Moderate Study
- **Sunitinib** has been reported to cause hypothyroidism when given with **levothyroxine**. Moderate Anecdotal

Tiagabine → see antiepileptics

Tiaprofenic acid → see NSAIDs

Tibolone → see TABLE 5 p. 1491 (thromboembolism)

Ticagrelor → see TABLE 6 p. 1491 (bradycardia), TABLE 4 p. 1490 (antiplatelet effects)
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study → Also see TABLE 6 p. 1491
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Cenobamate** is predicted to decrease the exposure to **ticagrelor**. Adjust dose. Moderate Theoretical
- **Ciclosporin** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Cobicistat** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Dabrafenib** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Ticagrelor** increases the concentration of **digoxin**. Moderate Study → Also see TABLE 6 p. 1491
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Ticagrelor** is predicted to increase the exposure to **ergotamine**. Avoid. Severe Theoretical
- **Grapefruit** juice moderately increases the exposure to **ticagrelor**. Moderate Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Idelalisib** is predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Ticagrelor** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(azithromycin)** are predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **ticagrelor**. Avoid. Severe Study
- **Mitotane** is predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Ranolazine** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- Rifamycins **(rifampicin)** are predicted to markedly decrease the exposure to **ticagrelor**. Avoid. Severe Study
- **Selumetinib** might increase the risk of bleeding when given with **ticagrelor**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **ticagrelor**. Moderate Theoretical
- **Ticagrelor** slightly to moderately increases the exposure to statins **(simvastatin)**. Adjust **simvastatin** dose, p. 222. Moderate Study
- **Ticagrelor** increases the exposure to thrombin inhibitors **(dabigatran)**. Monitor and adjust dose. Severe Study
- **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study

Tigecycline → see TABLE 1 p. 1490 (hepatotoxicity)
- Antiarrhythmics **(amiodarone, dronedarone)** might increase the exposure to **tigecycline**. Mild Anecdotal
- Antiepileptics **(carbamazepine)** might decrease the exposure to **tigecycline**. Mild Theoretical → Also see TABLE 1 p. 1490
- Antifungals, azoles **(itraconazole, ketoconazole)** might increase the exposure to **tigecycline**. Mild Anecdotal → Also see TABLE 1 p. 1490
- Calcium channel blockers **(verapamil)** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Ciclosporin** might increase the exposure to **tigecycline** and **tigecycline** has been reported to increase the concentration of **ciclosporin**. Severe Anecdotal
- **Tigecycline** is predicted to alter the anticoagulant effect of **coumarins**. Moderate Anecdotal
- HIV-protease inhibitors **(lopinavir, ritonavir)** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Ivacaftor** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Lapatinib** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Macrolides** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Neratinib** might increase the exposure to **tigecycline**. Mild Anecdotal → Also see TABLE 1 p. 1490
- **Tigecycline** is predicted to increase the anticoagulant effect of **phenindione**. Severe Theoretical

- **Ranolazine** might increase the exposure to **tigecycline**. Mild Anecdotal
- Retinoids **(acitretin, alitretinoin, isotretinoin, tretinoin)** increase the risk of benign intracranial hypertension when given with **tigecycline**. Avoid. Severe Anecdotal
- Rifamycins **(rifampicin)** might decrease the exposure to **tigecycline**. Mild Theoretical
- **St John's wort** might decrease the exposure to **tigecycline**. Mild Theoretical
- **Tigecycline** has been reported to increase the concentration of **tacrolimus**. Severe Anecdotal
- **Vandetanib** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Vemurafenib** might increase the exposure to **tigecycline**. Mild Anecdotal

Tildrakizumab → see monoclonal antibodies

Timolol → see beta blockers, non-selective

Tinzaparin → see low molecular-weight heparins

Tioguanine → see **TABLE 15** p. 1493 (myelosuppression)

- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **tioguanine**. UKHSA advises avoid (refer to Green Book). Severe Theoretical

Tiotropium → see **TABLE 10** p. 1492 (antimuscarinics)

- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **tiotropium**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 10** p. 1492

Tipranavir → see HIV-protease inhibitors

Tirofiban → see **TABLE 3** p. 1490 (anticoagulant effects)

Tivozanib

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **tivozanib**. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tivozanib**. Severe Study
- **Mitotane** is predicted to decrease the exposure to **tivozanib**. Severe Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **tivozanib**. Severe Study
- **St John's wort** is predicted to decrease the exposure to **tivozanib**. Avoid. Severe Study
- **Tivozanib** is predicted to decrease the exposure to statins **(rosuvastatin)**. Moderate Theoretical

Tizanidine → see **TABLE 6** p. 1491 (bradycardia), **TABLE 8** p. 1491 (hypotension), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 11** p. 1492 (CNS depressant effects)

- Antiepileptics **(fosphenytoin, phenytoin)** moderately decrease the exposure to **tizanidine**. Mild Study
- **Axitinib** is predicted to increase the exposure to **tizanidine**. Moderate Theoretical
- **Combined hormonal contraceptives** increases the exposure to **tizanidine**. Avoid. Moderate Study
- **Givosiran** is predicted to increase the exposure to **tizanidine**. Use with caution and adjust dose. Moderate Study
- HIV-protease inhibitors **(ritonavir)** moderately decrease the exposure to **tizanidine**. Mild Study
- Iron chelators **(deferasirox)** are predicted to increase the exposure to **tizanidine**. Avoid. Moderate Theoretical
- **Leflunomide** moderately decreases the exposure to **tizanidine**. Mild Study
- **Mexiletine** increases the exposure to **tizanidine**. Avoid. Moderate Study
- **Obeticholic acid** is predicted to increase the exposure to **tizanidine**. Severe Theoretical
- **Osilodrostat** increases the exposure to **tizanidine**. Avoid. Moderate Study → Also see **TABLE 9** p. 1492
- Quinolones **(ciprofloxacin)** increase the exposure to **tizanidine**. Avoid. Moderate Study
- Rifamycins **(rifampicin)** moderately decrease the exposure to **tizanidine**. Mild Study
- **Rucaparib** increases the exposure to **tizanidine**. Avoid. Moderate Study
- SSRIs **(fluvoxamine)** very markedly increase the exposure to **tizanidine**. Avoid. Severe Study
- **Teriflunomide** moderately decreases the exposure to **tizanidine**. Mild Study
- **Vemurafenib** increases the exposure to **tizanidine**. Avoid. Moderate Study → Also see **TABLE 9** p. 1492

Tobramycin → see aminoglycosides

Tocilizumab → see monoclonal antibodies

Tofacitinib

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- Antiarrhythmics **(dronedarone)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole)** increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- Antifungals, azoles **(isavuconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- Antifungals, azoles **(posaconazole)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Ciclosporin** increases the exposure to **tofacitinib**. Avoid. Severe Study
- **Cobicistat** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Tofacitinib** is predicted to increase the risk of bleeding when given with **coumarins**. Severe Theoretical
- **Crizotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Dabrafenib** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **Filgotinib** is predicted to increase the risk of immunosuppression when given with **tofacitinib**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Imatinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Letermovir** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Live vaccines** potentially increase the risk of generalised infection (possibly life-threatening) when given with **tofacitinib**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- Macrolides **(erythromycin)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** given with a potent CYP2C19 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **Nilotinib** given with a potent CYP2C19 inhibitor is predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study

Tofacitinib (continued)

- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **Tofacitinib** is predicted to increase the risk of bleeding when given with **phenindione**. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **tofacitinib**. Avoid. Severe Study
- SSRIs **(fluoxetine, fluvoxamine)** given with a moderate CYP3A4 inhibitor are predicted to increase the exposure to **tofacitinib**. Adjust **tofacitinib** dose, p. 1200. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **tofacitinib**. Moderate Study
- **Tacrolimus** increases the exposure to **tofacitinib**. Avoid. Severe Study

Tolbutamide → see sulfonylureas

Tolcapone

- **Tolcapone** increases the exposure to **levodopa**. Monitor and adjust dose. Moderate Study
- **Tolcapone** is predicted to increase the effects of **MAOIs, irreversible**. Avoid. Severe Theoretical
- **Tolcapone** is predicted to increase the risk of cardiovascular adverse effects when given with **sympathomimetics, inotropic**. Moderate Theoretical
- **Tolcapone** is predicted to increase the effects of sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine)**. Moderate Theoretical

Tolfenamic acid → see NSAIDs

Tolterodine → see **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 10** p. 1492 (antimuscarinics)

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolterodine**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **tolterodine**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 10** p. 1492
- **Cobicistat** is predicted to increase the exposure to **tolterodine**. Avoid. Severe Study
- **Dacomitinib** is predicted to markedly increase the exposure to **tolterodine**. Avoid. Severe Study
- **Eliglustat** is predicted to increase the exposure to **tolterodine**. Adjust dose. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **tolterodine**. Avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **tolterodine**. Avoid. Severe Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **tolterodine**. Avoid. Severe Study → Also see **TABLE 9** p. 1492

Tolvaptan → see **TABLE 16** p. 1494 (increased serum potassium)

GENERAL INFORMATION Avoid concurrent use of drugs that increase serum-sodium concentrations.

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. Severe Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- **Cenobamate** is predicted to decrease the exposure to **tolvaptan**. Adjust dose. Moderate Theoretical
- **Cobicistat** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. Severe Study
- **Crizotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- **Tolvaptan** increases the concentration of **digoxin**. Mild Study
- **Grapefruit** juice increases the exposure to **tolvaptan**. Avoid. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. Severe Study
- **Idelalisib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. Severe Study
- **Imatinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- **Letermovir** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- **Tolvaptan** is predicted to increase the exposure to **lomitapide**. Separate administration by 12 hours. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with potent CYP3A4 inhibitors, p. 724. Severe Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. Severe Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **tolvaptan**. Manufacturer advises caution or adjust **tolvaptan** dose with moderate CYP3A4 inhibitors, p. 724. Moderate Study
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **tolvaptan**. Use with caution and adjust **tolvaptan** dose, p. 724. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **tolvaptan**. Use with caution or avoid depending on indication. Severe Study
- **St John's wort** is predicted to decrease the exposure to **tolvaptan**. Avoid. Moderate Theoretical

Topiramate → see antiepileptics

Topotecan → see **TABLE 15** p. 1493 (myelosuppression)

- Anti-androgens **(darolutamide)** are predicted to increase the exposure to **topotecan**. Avoid. Severe Theoretical
- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the exposure to **topotecan**. Severe Study
- Antiepileptics **(fosphenytoin, phenytoin)** increase the clearance of **topotecan**. Moderate Study
- Antifungals, azoles **(isavuconazole)** are predicted to increase the exposure to **topotecan**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the exposure to **topotecan**. Severe Study
- **Berotralstat** is predicted to increase the concentration of **topotecan**. Monitor and adjust dose. Moderate Study
- Calcium channel blockers **(verapamil)** are predicted to increase the exposure to **topotecan**. Severe Study
- **Ceritinib** is predicted to increase the exposure to **topotecan**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Ciclosporin** is predicted to increase the exposure to **topotecan**. Severe Study
- **Eliglustat** is predicted to increase the exposure to **topotecan**. Adjust dose. Moderate Study
- HIV-protease inhibitors **(lopinavir, ritonavir)** are predicted to increase the exposure to **topotecan**. Severe Study

- **Ibrutinib** is predicted to increase the exposure to **topotecan**. Separate administration by at least 6 hours. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Ivacaftor** is predicted to increase the exposure to **topotecan**. Severe Study
- **Lapatinib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Leflunomide** is predicted to increase the exposure to **topotecan**. Moderate Study → Also see **TABLE 15** p. 1493
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **topotecan**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- **Lorlatinib** is predicted to decrease the exposure to **topotecan**. Moderate Study
- **Macrolides** are predicted to increase the exposure to **topotecan**. Severe Study
- **Mirabegron** is predicted to increase the exposure to **topotecan**. Mild Theoretical
- **Neratinib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Olaparib** might increase the exposure to **topotecan**. Moderate Theoretical → Also see **TABLE 15** p. 1493
- **Osimertinib** is predicted to increase the exposure to **topotecan**. Moderate Study
- **Pibrentasvir** with glecaprevir is predicted to increase the exposure to **topotecan**. Moderate Study
- **Pitolisant** is predicted to decrease the exposure to **topotecan**. Mild Theoretical
- **Ranolazine** is predicted to increase the exposure to **topotecan**. Severe Study
- **Regorafenib** is predicted to increase the exposure to **topotecan**. Moderate Study → Also see **TABLE 15** p. 1493
- **Roxadustat** might increase the exposure to **topotecan**. Monitor adverse effects and adjust dose. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **topotecan**. Severe Study → Also see **TABLE 15** p. 1493
- **Sotorasib** is predicted to increase the exposure to **topotecan**. Avoid or adjust dose. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **topotecan**. Severe Theoretical
- **Tedizolid** is predicted to increase the exposure to **topotecan**. Avoid. Moderate Study
- **Tepotinib** is predicted to increase the concentration of **topotecan**. Severe Study
- **Teriflunomide** is predicted to increase the exposure to **topotecan**. Moderate Study
- **Tucatinib** is predicted to increase the exposure to **topotecan**. Use with caution and adjust dose. Moderate Theoretical
- **Vandetanib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **topotecan**. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Venetoclax** is predicted to increase the exposure to **topotecan**. Moderate Theoretical
- **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. Severe Theoretical

Torasemide → see loop diuretics

Toremifene → see **TABLE 5** p. 1491 (thromboembolism), **TABLE 9** p. 1492 (QT-interval prolongation)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **toremifene**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Cobicistat** is predicted to increase the exposure to **toremifene**. Moderate Theoretical
- **Toremifene** is predicted to increase the anticoagulant effect of **coumarins**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **toremifene**. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **toremifene**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **toremifene**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Mitotane** is predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **toremifene**. Adjust dose. Moderate Study
- **Thiazide diuretics** are predicted to increase the risk of hypercalcaemia when given with **toremifene**. Severe Theoretical

Trabectedin → see **TABLE 1** p. 1490 (hepatotoxicity), **TABLE 15** p. 1493 (myelosuppression)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical → Also see **TABLE 1** p. 1490
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical → Also see **TABLE 1** p. 1490
- **Cobicistat** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **trabectedin**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **trabectedin**. Avoid or adjust dose. Severe Theoretical
- **Mitotane** is predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1493
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **trabectedin**. Avoid. Severe Theoretical

Tralokinumab → see monoclonal antibodies

Tramadol → see opioids

Trametinib

- Antiarrhythmics **(amiodarone, dronedarone)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- Calcium channel blockers **(verapamil)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Ciclosporin** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Drugs with anticoagulant effects** (see **TABLE 3** p. 1490) cause bleeding, as can **trametinib**; concurrent use might increase the risk of developing this effect. Severe Theoretical
- **Drugs with antiplatelet effects** (see **TABLE 4** p. 1490) cause bleeding, as can **trametinib**; concurrent use might increase the risk of developing this effect. Severe Theoretical
- HIV-protease inhibitors **(lopinavir, ritonavir)** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Ivacaftor** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Lapatinib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Macrolides** are predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Neratinib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Ranolazine** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Rucaparib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Vandetanib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical

Trametinib (continued)

- **Vemurafenib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical

Trandolapril → see ACE inhibitors

Tranexamic acid → see **TABLE 5** p. 1491 (thromboembolism)

Tranylcypromine → see MAOIs, irreversible

Trastuzumab → see monoclonal antibodies

Trastuzumab deruxtecan → see monoclonal antibodies

Trastuzumab emtansine → see monoclonal antibodies

Trazodone → see **TABLE 13** p. 1493 (serotonin syndrome), **TABLE 11** p. 1492 (CNS depressant effects)

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- Antiepileptics **(carbamazepine)** decrease the concentration of **trazodone**. Adjust dose. Moderate Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Cobicistat** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- **Idelalisib** is predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- **Imatinib** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Letermovir** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- Macrolides **(clarithromycin)** are predicted to moderately increase the exposure to **trazodone**. Avoid or adjust dose. Moderate Study
- Macrolides **(erythromycin)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Nilotinib** is predicted to increase the exposure to **trazodone**. Moderate Theoretical
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **trazodone**. Moderate Theoretical

Tree pollen extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Treosulfan → see alkylating agents

Treprostinil → see **TABLE 8** p. 1491 (hypotension), **TABLE 4** p. 1490 (antiplatelet effects)

- Antiepileptics **(carbamazepine, phenobarbital, phenytoin)** are predicted to decrease the exposure to **treprostinil**. Adjust dose. Mild Theoretical
- **Clopidogrel** is predicted to increase the exposure to **treprostinil**. Adjust dose. Moderate Theoretical → Also see **TABLE 4** p. 1490
- Fibrates **(gemfibrozil)** increase the exposure to **treprostinil**. Adjust dose. Moderate Study
- Iron chelators **(deferasirox)** are predicted to increase the exposure to **treprostinil**. Adjust dose. Moderate Theoretical
- Loop diuretics **(furosemide)** might slightly decrease the clearance of **treprostinil**. Unknown Theoretical → Also see **TABLE 8** p. 1491
- Rifamycins **(rifampicin)** slightly decrease the exposure to **treprostinil**. Adjust dose. Mild Study
- **St John's wort** is predicted to decrease the exposure to **treprostinil**. Adjust dose. Mild Theoretical
- **Trimethoprim** is predicted to increase the exposure to **treprostinil**. Adjust dose. Moderate Theoretical

Tretinoin → see retinoids

Triamcinolone → see corticosteroids

Triamterene → see potassium-sparing diuretics

Tricyclic antidepressants → see **TABLE 18** p. 1494 (hyponatraemia), **TABLE 8** p. 1491 (hypotension), **TABLE 13** p. 1493 (serotonin syndrome), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 11** p. 1492 (CNS depressant effects), **TABLE 10** p. 1492 (antimuscarinics)

amitriptyline · clomipramine · dosulepin · doxepin · imipramine · lofepramine · nortriptyline · trimipramine

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions of topical **doxepin** should be borne in mind.

- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **tricyclic antidepressants**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(propafenone)** are predicted to increase the concentration of **tricyclic antidepressants**. Moderate Theoretical → Also see **TABLE 10** p. 1492
- Antiepileptics **(carbamazepine)** decrease the exposure to **tricyclic antidepressants**. Adjust dose. Moderate Study → Also see **TABLE 18** p. 1494
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the exposure to **tricyclic antidepressants**. Moderate Study → Also see **TABLE 11** p. 1492
- Antiepileptics **(valproate)** increase the concentration of **nortriptyline**. Severe Study
- Tricyclic antidepressants **(clomipramine, imipramine)** potentially increase the risk of overheating and dehydration when given with antiepileptics **(zonisamide)**. Avoid in children. Severe Theoretical
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **tricyclic antidepressants** ; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492 → Also see **TABLE 10** p. 1492
- **Bupropion** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study
- **Cinacalcet** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study
- **Tricyclic antidepressants** decrease the antihypertensive effects of **clonidine**. Monitor and adjust dose. Moderate Anecdotal → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492
- **Cobicistat** is predicted to slightly increase the exposure to **tricyclic antidepressants**. Mild Study
- **Dacomitinib** is predicted to markedly increase the exposure to tricyclic antidepressants **(imipramine, nortriptyline)**. Avoid. Severe Study
- **Darifenacin** (high-dose) is predicted to increase the exposure to **tricyclic antidepressants**. Moderate Study → Also see **TABLE 10** p. 1492
- **Eliglustat** is predicted to increase the exposure to **nortriptyline**. Adjust dose. Moderate Theoretical
- H_2 receptor antagonists **(cimetidine)** increase the exposure to **tricyclic antidepressants**. Moderate Study
- HIV-protease inhibitors **(ritonavir, tipranavir)** are predicted to increase the exposure to **tricyclic antidepressants**. Moderate Theoretical
- **Tricyclic antidepressants** potentially increase the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 13** p. 1493 → Also see **TABLE 9** p. 1492
- **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **MAOIs, irreversible**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 13** p. 1493
- **Methylphenidate** might increase the concentration of **tricyclic antidepressants**. Use with caution and adjust dose. Moderate Study
- **Amitriptyline** decreases the effects of **metyrapone**. Avoid. Moderate Theoretical

- **Tricyclic antidepressants** are predicted to increase the risk of severe toxic reaction when given with **moclobemide**. Avoid. Severe Theoretical → Also see **TABLE 13** p. 1493
- **Tricyclic antidepressants** are predicted to decrease the effects of **moxonidine**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of tricyclic antidepressants **(amitriptyline, imipramine, nortriptyline)**. Moderate Theoretical
- **Tricyclic antidepressants** might increase the risk of adverse effects when given with **ozanimod**. Severe Theoretical
- **Tricyclic antidepressants** are predicted to decrease the efficacy of **pitolisant**. Mild Theoretical
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493
- SSRIs **(fluvoxamine)** markedly increase the exposure to **clomipramine**. Adjust dose. Severe Study → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493
- SSRIs **(fluvoxamine)** increase the exposure to tricyclic antidepressants **(amitriptyline, imipramine)**. Adjust dose. Severe Study → Also see **TABLE 18** p. 1494 → Also see **TABLE 13** p. 1493
- **Sucralfate** is predicted to decrease the absorption of **tricyclic antidepressants**. Moderate Study
- **Tricyclic antidepressants** increase the effects of sympathomimetics, vasoconstrictor **(adrenaline/epinephrine, noradrenaline/norepinephrine, phenylephrine)**. Avoid. Severe Study
- **Tricyclic antidepressants** are predicted to decrease the effects of sympathomimetics, vasoconstrictor **(ephedrine)**. Avoid. Severe Study
- **Terbinafine** is predicted to increase the exposure to **tricyclic antidepressants**. Monitor for toxicity and adjust dose. Severe Study
- **Tricyclic antidepressants** increase the risk of cardiac arrhythmias and hypotension when given with **thiopental**. Moderate Study → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492

Trientine

- Oral **trientine** potentially decreases the absorption of oral **iron**. Moderate Theoretical
- **Trientine** potentially decreases the absorption of **zinc**. Moderate Theoretical

Trifluoperazine → see phenothiazines

Trihexyphenidyl → see **TABLE 10** p. 1492 (antimuscarinics)

- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **trihexyphenidyl**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 10** p. 1492

Trimethoprim → see **TABLE 18** p. 1494 (hyponatraemia), **TABLE 2** p. 1490 (nephrotoxicity), **TABLE 16** p. 1494 (increased serum potassium)

- **Trimethoprim** increases the concentration of antiepileptics **(fosphenytoin, phenytoin)**. Moderate Study
- Antimalarials **(pyrimethamine)** increase the risk of adverse effects when given with **trimethoprim**. Severe Study
- **Trimethoprim** might increase the risk of haematological toxicity when given with **azathioprine** in renal transplant patients. Severe Anecdotal
- **Trimethoprim** is predicted to increase the anticoagulant effect of **coumarins**. Severe Study
- **Dapsone** increases the exposure to **trimethoprim** and **trimethoprim** increases the exposure to **dapsone**. Severe Study
- **Trimethoprim** increases the concentration of **digoxin**. Moderate Study
- **Trimethoprim** is predicted to increase the exposure to dopamine receptor agonists **(pramipexole)**. Adjust dose. Moderate Study
- **Trimethoprim** slightly increases the exposure to meglitinides **(repaglinide)**. Avoid or monitor blood glucose. Moderate Study
- **Trimethoprim** might increase the risk of haematological toxicity when given with **mercaptopurine** in renal transplant patients. Severe Theoretical
- **Trimethoprim** increases the risk of adverse effects when given with **methotrexate**. Avoid. Severe Anecdotal → Also see **TABLE 2** p. 1490
- **Trimethoprim** slightly increases the exposure to NRTIs **(lamivudine)**. Moderate Study
- Rifamycins **(rifampicin)** decrease the exposure to **trimethoprim**. Moderate Study
- **Trimethoprim** is predicted to decrease the efficacy of **sapropterin**. Moderate Theoretical
- **Trimethoprim** is predicted to increase the exposure to **treprostinil**. Adjust dose. Moderate Theoretical

Trimipramine → see tricyclic antidepressants

Triptans → see **TABLE 13** p. 1493 (serotonin syndrome)

almotriptan • eletriptan • frovatriptan • naratriptan • rizatriptan • sumatriptan • zolmitriptan

- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** increase the exposure to **almotriptan**. Mild Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- Beta blockers, non-selective **(propranolol)** slightly to moderately increase the exposure to **rizatriptan**. Adjust **rizatriptan** dose and separate administration by at least 2 hours, p. 513. Moderate Study
- **Cenobamate** is predicted to decrease the exposure to **eletriptan**. Adjust dose. Moderate Theoretical
- **Cobicistat** increases the exposure to **almotriptan**. Mild Study
- **Cobicistat** is predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- **Combined hormonal contraceptives** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical
- **Almotriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **almotriptan**. Severe Theoretical
- **Eletriptan** increases the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. Severe Study
- **Rizatriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **rizatriptan**. Severe Theoretical
- **Sumatriptan** increases the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **sumatriptan**. Severe Study
- Triptans **(frovatriptan, naratriptan)** are predicted to increase the risk of vasoconstriction when given with **ergotamine**. Separate administration by 24 hours. Severe Theoretical
- **Zolmitriptan** is predicted to increase the risk of vasoconstriction when given with **ergotamine**. **Ergotamine** should be taken at least 24 hours before or 6 hours after **zolmitriptan**. Severe Theoretical
- H_2 receptor antagonists **(cimetidine)** slightly increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. Mild Study
- **HIV-protease inhibitors** increase the exposure to **almotriptan**. Mild Study
- **HIV-protease inhibitors** are predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- **Idelalisib** increases the exposure to **almotriptan**. Mild Study
- **Idelalisib** is predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- Macrolides **(clarithromycin)** increase the exposure to **almotriptan**. Mild Study
- Macrolides **(clarithromycin)** are predicted to markedly increase the exposure to **eletriptan**. Avoid. Severe Study
- Macrolides **(erythromycin)** moderately increase the exposure to **eletriptan**. Avoid. Moderate Study
- **MAOIs, irreversible** are predicted to increase the exposure to triptans **(rizatriptan, sumatriptan)**. Avoid and for 14 days after stopping the MAOI. Severe Theoretical → Also see **TABLE 13** p. 1493
- **MAOIs, irreversible** are predicted to increase the exposure to **zolmitriptan**. Severe Theoretical → Also see **TABLE 13** p. 1493

Triptans (continued)
- **Mexiletine** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical
- **Moclobemide** moderately increases the exposure to triptans **(rizatriptan, sumatriptan)**. Avoid. Moderate Study → Also see TABLE 13 p. 1493
- **Moclobemide** slightly increases the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. Moderate Study → Also see TABLE 13 p. 1493
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **eletriptan**. Moderate Study
- **Osilodrostat** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical
- **Rucaparib** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical
- SSRIs **(fluvoxamine)** increase the concentration of **frovatriptan**. Severe Study → Also see TABLE 13 p. 1493
- SSRIs **(fluvoxamine)** are predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. Severe Theoretical → Also see TABLE 13 p. 1493
- **Vemurafenib** is predicted to increase the exposure to **zolmitriptan**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical

Tropicamide → see TABLE 10 p. 1492 (antimuscarinics)
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **tropicamide**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492

Trospium → see TABLE 10 p. 1492 (antimuscarinics)
- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **trospium**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492

Tryptophan → see TABLE 13 p. 1493 (serotonin syndrome)
- **Tryptophan** greatly decreases the concentration of **levodopa**. Moderate Study
- **Tryptophan** increases the risk of adverse effects when given with **MAOIs, irreversible**. Severe Anecdotal → Also see TABLE 13 p. 1493

Tucatinib
- **Tucatinib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **tucatinib**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **tucatinib**. Avoid. Severe Study
- **Tucatinib** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Use with caution and adjust dose. Moderate Theoretical
- **Tucatinib** markedly increases the exposure to benzodiazepines **(midazolam)**. Avoid or adjust dose. Moderate Study
- **Tucatinib** is predicted to increase the exposure to **buspirone**. Avoid or adjust dose. Moderate Theoretical
- **Clopidogrel** is predicted to increase the exposure to **tucatinib**. Avoid or adjust **tucatinib** dose, p. 1085. Severe Study
- **Tucatinib** is predicted to increase the exposure to **colchicine**. Use with caution and adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **darifenacin**. Avoid or adjust dose. Moderate Theoretical
- **Tucatinib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. Moderate Study
- **Tucatinib** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to factor XA inhibitors **(edoxaban)**. Avoid or adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to factor XA inhibitors **(rivaroxaban)**. Use with caution and adjust dose. Moderate Theoretical
- Fibrates **(gemfibrozil)** are predicted to increase the exposure to **tucatinib**. Avoid or adjust **tucatinib** dose, p. 1085. Severe Study
- **Tucatinib** is predicted to increase the exposure to HIV-protease inhibitors **(darunavir, tipranavir)**. Avoid or adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **ibrutinib**. Avoid or adjust dose. Moderate Theoretical
- Iron chelators **(deferasirox)** are predicted to increase the exposure to **tucatinib**. Moderate Theoretical
- **Leflunomide** is predicted to increase the exposure to **tucatinib**. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **lomitapide**. Avoid or adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **loperamide**. Use with caution and adjust dose. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **tucatinib**. Avoid. Severe Study
- **Tucatinib** is predicted to increase the exposure to **naloxegol**. Avoid or adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to opioids **(alfentanil)**. Avoid or adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to phosphodiesterase type-5 inhibitors **(avanafil, vardenafil)**. Avoid or adjust dose. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **tucatinib**. Avoid. Severe Study
- **Tucatinib** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **tucatinib**. Avoid. Severe Theoretical
- **Tucatinib** is predicted to increase the exposure to statins **(simvastatin)**. Avoid or adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **tacrolimus**. Avoid or adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **talazoparib**. Use with caution and adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to taxanes **(docetaxel, paclitaxel)**. Use with caution and adjust dose. Moderate Theoretical
- **Teriflunomide** is predicted to increase the exposure to **tucatinib**. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Use with caution and adjust dose. Moderate Theoretical
- **Tucatinib** is predicted to increase the exposure to **topotecan**. Use with caution and adjust dose. Moderate Theoretical

Typhoid vaccine, oral → see live vaccines

Ulipristal
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. Severe Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- Antiepileptics **(carbamazepine, eslicarbazepine, fosphenytoin, oxcarbazepine, perampanel, phenobarbital, phenytoin, primidone, rufinamide, topiramate)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- **Combined hormonal contraceptives** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of

combined hormonal contraceptives. Avoid or use additional contraceptive precautions. Severe Theoretical

- **Crizotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Dabrafenib** is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. Severe Theoretical
- **Desogestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **desogestrel**. Avoid or use additional contraceptive precautions. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Etonogestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **etonogestrel**. Avoid. Severe Theoretical
- **Grapefruit** juice is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Theoretical
- **Griseofulvin** potentially decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- HIV-protease inhibitors **(atazanavir, darunavir, fosamprenavir, lopinavir, tipranavir)** boosted with ritonavir are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- HIV-protease inhibitors **(ritonavir)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Idelalisib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- **Imatinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Letermovir** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Levonorgestrel** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **levonorgestrel**. Avoid. Severe Theoretical
- **Lumacaftor** is predicted to decrease the efficacy of **ulipristal**. Use additional contraceptive precautions. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Severe Study
- Macrolides **(erythromycin)** moderately increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Mitotane** is predicted to decrease the efficacy of **ulipristal**. Avoid and for 4 weeks after stopping **ulipristal**. Severe Theoretical
- **Modafinil** decreases the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- Neurokinin-1 receptor antagonists **(aprepitant, fosaprepitant)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- Neurokinin-1 receptor antagonists **(netupitant)** are predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **ulipristal**. Avoid if used for uterine fibroids. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **Norethisterone** might decrease the efficacy of **ulipristal** and **ulipristal** might decrease the efficacy of **norethisterone**. Avoid or use additional contraceptive precautions. Severe Theoretical
- **Rifamycins** decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal
- **St John's wort** is predicted to decrease the efficacy of **ulipristal**. For FSRH guidance, see Contraceptives, interactions p. 859. Severe Anecdotal

Umeclidinium → see TABLE 10 p. 1492 (antimuscarinics)

- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **umeclidinium**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see TABLE 10 p. 1492

Upadacitinib

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **upadacitinib**. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **upadacitinib**. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. Severe Study
- Antifungals, azoles **(posaconazole)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. Severe Study
- **Grapefruit** is predicted to increase the exposure to **upadacitinib**. Avoid. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. Severe Study
- **Idelalisib** is predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. Severe Study
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **upadacitinib**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **upadacitinib**. Use with caution or avoid. Severe Study
- **Mitotane** is predicted to decrease the exposure to **upadacitinib**. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **upadacitinib**. Moderate Study

Urokinase → see TABLE 3 p. 1490 (anticoagulant effects)

Ursodeoxycholic acid

- Oral **antacids** are predicted to decrease the absorption of oral **ursodeoxycholic acid**. Separate administration by 2 hours. Moderate Theoretical
- **Ursodeoxycholic acid** affects the concentration of **ciclosporin**. Use with caution and adjust dose. Severe Anecdotal
- **Fibrates** are predicted to decrease the efficacy of **ursodeoxycholic acid**. Avoid. Severe Theoretical

Ustekinumab → see monoclonal antibodies

Vaborbactam

- **Vaborbactam** is predicted to increase the concentration of beta blockers, selective **(metoprolol)**. Unknown Theoretical
- **Vaborbactam** is predicted to increase the concentration of SNRIs **(venlafaxine)**. Unknown Theoretical

Valaciclovir → see TABLE 2 p. 1490 (nephrotoxicity)

- **Valaciclovir** is predicted to increase the exposure to **aminophylline**. Severe Anecdotal
- **Valaciclovir** is predicted to decrease the efficacy of live vaccines **(herpes-zoster vaccine, live)**. Moderate Theoretical
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valaciclovir**. Moderate Theoretical
- **Valaciclovir** is predicted to increase the exposure to **theophylline**. Severe Theoretical

Valganciclovir → see TABLE 15 p. 1493 (myelosuppression), TABLE 2 p. 1490 (nephrotoxicity)

- **Valganciclovir** is predicted to increase the risk of seizures when given with carbapenems **(imipenem)**. Avoid. Severe Anecdotal
- **Mycophenolate** is predicted to increase the risk of haematological toxicity when given with **valganciclovir**. Moderate Theoretical

Valproate → see antiepileptics

Valsartan → see angiotensin-II receptor antagonists

Vancomycin → see TABLE 2 p. 1490 (nephrotoxicity), TABLE 19 p. 1494 (ototoxicity)

Vandetanib → see TABLE 9 p. 1492 (QT-interval prolongation)

- **Vandetanib** is predicted to increase the exposure to **afatinib**. Moderate Study
- **Vandetanib** is predicted to increase the exposure to **aliskiren**. Moderate Study
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study → Also see TABLE 9 p. 1492

Vandetanib (continued)

- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Vandetanib** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Study
- **Vandetanib** is predicted to increase the exposure to **berotralstat**. Severe Study
- **Vandetanib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. Moderate Theoretical
- **Vandetanib** is predicted to increase the exposure to **colchicine**. Moderate Study
- **Dabrafenib** is predicted to decrease the exposure to **vandetanib**. Moderate Study
- **Vandetanib** slightly increases the exposure to **digoxin**. Moderate Study
- **Vandetanib** is predicted to increase the exposure to dopamine receptor agonists **(pramipexole)**. Adjust dose. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **vandetanib**. Moderate Study
- **Vandetanib** is predicted to increase the exposure to **erlotinib**. Moderate Theoretical
- **Vandetanib** is predicted to increase the exposure to **everolimus**. Moderate Study
- **Vandetanib** is predicted to increase the exposure to factor XA inhibitors **(apixaban)**. Moderate Theoretical
- **Vandetanib** is predicted to increase the exposure to factor XA inhibitors **(edoxaban, rivaroxaban)**. Moderate Study
- **Vandetanib** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Vandetanib** is predicted to increase the exposure to **gilteritinib**. Moderate Theoretical
- **Vandetanib** is predicted to increase the exposure to **loperamide**. Moderate Study
- **Vandetanib** increases the exposure to **metformin**. Monitor and adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Vandetanib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **vandetanib**. Moderate Study → Also see **TABLE 9** p. 1492
- **Vandetanib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **vandetanib**. Avoid. Moderate Study
- **Vandetanib** is predicted to increase the exposure to **sirolimus**. Moderate Study
- **St John's wort** is predicted to decrease the exposure to **vandetanib**. Avoid. Severe Study
- **Vandetanib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Vandetanib** is predicted to increase the exposure to taxanes **(docetaxel)** (oral). Unknown Theoretical
- **Vandetanib** is predicted to increase the exposure to taxanes **(paclitaxel)** (oral). Unknown Study
- **Vandetanib** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Moderate Study
- **Vandetanib** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Vandetanib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Vandetanib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Vandetanib** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492

Vardenafil → see phosphodiesterase type-5 inhibitors
Varicella-zoster immunoglobulin → see immunoglobulins
Varicella-zoster vaccine → see live vaccines
Vecuronium → see neuromuscular blocking drugs, non-depolarising
Vedolizumab → see monoclonal antibodies

Velpatasvir

- **Velpatasvir** is predicted to increase the exposure to **aliskiren**. Severe Theoretical
- Oral **antacids** are predicted to decrease the concentration of oral **velpatasvir**. Separate administration by 4 hours. Moderate Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the concentration of **velpatasvir**. Avoid or monitor. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. Severe Theoretical
- **Velpatasvir** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Severe Theoretical
- Calcium salts **(calcium carbonate)** are predicted to decrease the concentration of **velpatasvir**. Separate administration by 4 hours. Moderate Anecdotal
- **Velpatasvir** is predicted to increase the exposure to **colchicine**. Severe Theoretical
- **Dabrafenib** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **Velpatasvir** is predicted to increase the exposure to **digoxin**. Severe Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **Velpatasvir** is predicted to increase the exposure to **everolimus**. Severe Theoretical
- **Velpatasvir** is predicted to increase the exposure to factor XA inhibitors **(edoxaban)**. Severe Theoretical
- **H_2 receptor antagonists** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 685. Moderate Study
- HIV-protease inhibitors **(tipranavir)** are predicted to increase the exposure to **velpatasvir**. Severe Theoretical
- **Velpatasvir** is predicted to increase the exposure to **loperamide**. Severe Theoretical
- **Mitotane** is predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Modafinil** is predicted to decrease the exposure to **velpatasvir**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **Proton pump inhibitors** are predicted to decrease the concentration of **velpatasvir**. Adjust dose, see sofosbuvir with velpatasvir p. 685. Moderate Study
- Rifamycins **(rifampicin)** are predicted to moderately decrease the exposure to **velpatasvir**. Avoid. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **sirolimus**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **velpatasvir**. Avoid. Moderate Theoretical
- **Velpatasvir** with sofosbuvir slightly increases the exposure to statins **(atorvastatin)**. Severe Study
- **Velpatasvir** with sofosbuvir is predicted to increase the exposure to statins **(fluvastatin, simvastatin)**. Monitor adverse effects and adjust dose. Severe Theoretical
- **Velpatasvir** moderately increases the exposure to statins **(rosuvastatin)**. Adjust **rosuvastatin** dose and monitor adverse effects, p. 221. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **sulfasalazine**. Moderate Theoretical
- **Velpatasvir** is predicted to increase the exposure to taxanes **(paclitaxel)**. Severe Theoretical
- **Velpatasvir** is predicted to increase the exposure to **tenofovir disoproxil**. Severe Study
- **Velpatasvir** increases the exposure to thrombin inhibitors **(dabigatran)**. Avoid. Severe Study
- **Velpatasvir** is predicted to increase the exposure to **topotecan**. Severe Theoretical

Vemurafenib → see **TABLE 9** p. 1492 (QT-interval prolongation)
- **Vemurafenib** is predicted to increase the exposure to **afatinib**. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **agomelatine**. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **aliskiren**. Use with caution and adjust dose. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **aminophylline**. Adjust dose. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to anaesthetics, local **(ropivacaine)**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **anagrelide**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Study → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Vemurafenib** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Use with caution and adjust dose. Severe Theoretical
- **Vemurafenib** increases the concentration of antipsychotics, second generation **(clozapine)**. Monitor adverse effects and adjust dose. Severe Study
- **Vemurafenib** is predicted to increase the exposure to antipsychotics, second generation **(olanzapine)**. Adjust dose. Moderate Anecdotal
- **Vemurafenib** slightly to moderately decreases the exposure to benzodiazepines **(midazolam)**. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **berotralstat**. Severe Study
- **Vemurafenib** is predicted to increase the exposure to beta blockers, non-selective **(nadolol)**. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **bictegravir**. Use with caution or avoid. Moderate Theoretical
- **Vemurafenib** is predicted to decrease the concentration of **bupropion**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Ciclosporin** might affect the exposure to **vemurafenib**. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **colchicine**. Avoid P-glycoprotein inhibitors or adjust **colchicine** dose, p. 1212. Severe Theoretical
- **Vemurafenib** might decrease the efficacy of **combined hormonal contraceptives**. Use additional contraceptive precautions. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **coumarins**. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Dabrafenib** is predicted to decrease the exposure to **vemurafenib**. Severe Study
- **Vemurafenib** slightly increases the exposure to **digoxin**. Use with caution and adjust dose. Severe Study
- **Vemurafenib** is predicted to increase the exposure to dipeptidylpeptidase-4 inhibitors **(sitagliptin)**. Use with caution or avoid. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to dopamine receptor agonists **(ropinirole)**. Adjust dose. Moderate Study
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **vemurafenib**. Severe Study
- **Vemurafenib** is predicted to increase the exposure to endothelin receptor antagonists **(ambrisentan)**. Use with caution or avoid. Moderate Theoretical
- **Vemurafenib** are predicted to increases the exposure to **erlotinib**. Monitor adverse effects and adjust dose. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **everolimus**. Use with caution and adjust dose. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to factor XA inhibitors **(apixaban)**. Moderate Theoretical
- **Vemurafenib** is predicted to slightly increase the exposure to factor XA inhibitors **(edoxaban)**. Severe Theoretical
- **Vemurafenib** might increase the exposure to factor XA inhibitors **(rivaroxaban)**. Use with caution and adjust dose. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **fidaxomicin**. Avoid. Moderate Study
- **Gefitinib** might affect the exposure to **vemurafenib**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **gilteritinib**. Moderate Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **larotrectinib**. Mild Theoretical
- **Letermovir** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Vemurafenib** might increase the exposure to **loperamide**. Use with caution and adjust dose. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **loxapine**. Avoid. Unknown Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Vemurafenib** slightly increases the exposure to MAO-B inhibitors **(rasagiline)**. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to **maraviroc**. Use with caution or avoid. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **melatonin**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Study
- Monoclonal antibodies **(ipilimumab)** might increase the risk of hepatotoxicity when given with **vemurafenib**. Avoid. Severe Study
- **Vemurafenib** is predicted to increase the exposure to **naldemedine**. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **vemurafenib**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **vemurafenib**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Vemurafenib** is predicted to increase the exposure to **nintedanib**. Moderate Study
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **vemurafenib**. Severe Study → Also see **TABLE 9** p. 1492
- **Vemurafenib** is predicted to increase the exposure to **panobinostat**. Adjust dose. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Vemurafenib** is predicted to increase the exposure to **phenindione**. Moderate Study
- **Vemurafenib** is predicted to increase the exposure to phenothiazines **(chlorpromazine)**. Moderate Theoretical → Also see **TABLE 9** p. 1492
- **Vemurafenib** is predicted to increase the exposure to phosphodiesterase type-4 inhibitors **(roflumilast)**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **pibrentasvir**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **pirfenidone**. Use with caution and adjust dose. Moderate Study
- **Vemurafenib** might increase the exposure to **ranolazine**. Use with caution or avoid. Moderate Theoretical → Also see **TABLE 9** p. 1492

Vemurafenib (continued)

- **Vemurafenib** is predicted to increase the exposure to **relugolix**. Avoid or take relugolix first and separate administration by at least 6 hours. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Study
- **Vemurafenib** is predicted to increase the exposure to **riluzole**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **sirolimus**. Use with caution and adjust dose. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to SNRIs **(duloxetine)**. Use with caution or avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **vemurafenib**. Avoid. Severe Study
- **Vemurafenib** is predicted to slightly increase the exposure to **talazoparib**. Avoid or adjust **talazoparib** dose, p. 1091. Severe Study
- **Vemurafenib** is predicted to increase the exposure to taxanes **(docetaxel)** (oral). Unknown Theoretical
- **Vemurafenib** is predicted to increase the exposure to taxanes **(paclitaxel)** (oral). Use with caution and adjust dose. Unknown Theoretical
- **Vemurafenib** is predicted to increase the exposure to **theophylline**. Monitor and adjust dose. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Monitor and adjust dose. Severe Theoretical
- **Vemurafenib** is predicted to increase the exposure to **ticagrelor**. Use with caution or avoid. Severe Study
- **Vemurafenib** might increase the exposure to **tigecycline**. Mild Anecdotal
- **Vemurafenib** increases the exposure to **tizanidine**. Avoid. Moderate Study → Also see **TABLE 9** p. 1492
- **Vemurafenib** is predicted to increase the exposure to **topotecan**. Severe Study
- **Vemurafenib** is predicted to increase the concentration of **trametinib**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to triptans **(zolmitriptan)**. Adjust **zolmitriptan** dose, p. 515. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Vemurafenib** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492

Venetoclax

FOOD AND LIFESTYLE Avoid Seville (bitter orange) and star fruit as they might increase the exposure to venetoclax.

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- Antiarrhythmics **(amiodarone)** are predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Venetoclax** is predicted to increase the exposure to antihistamines, non-sedating **(fexofenadine)**. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Ciclosporin** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Venetoclax** is predicted to increase the exposure to **colchicine**. Avoid or adjust dose. Severe Study
- **Venetoclax** slightly increases the exposure to coumarins **(warfarin)**. Moderate Study
- **Crizotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Dabrafenib** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Venetoclax** increases the exposure to **digoxin**. Avoid or adjust dose. Severe Study
- **Eltrombopag** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Venetoclax** is predicted to increase the exposure to endothelin receptor antagonists **(bosentan)**. Moderate Theoretical
- **Venetoclax** is predicted to increase the exposure to **everolimus**. Avoid or adjust dose. Severe Study
- **Venetoclax** is predicted to increase the exposure to factor XA inhibitors **(edoxaban, rivaroxaban)**. Avoid or adjust dose. Severe Study
- **Grapefruit** juice is predicted to increase the exposure to **venetoclax**. Avoid. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Idelalisib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Imatinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Ivacaftor** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Lapatinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Leflunomide** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Letermovir** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Venetoclax** potentially decreases the efficacy of **live vaccines**. Avoid. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Venetoclax** is predicted to increase the exposure to meglitinides **(repaglinide)**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Neratinib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Nilotinib** is predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **venetoclax**. Avoid or adjust dose—consult product literature. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- Quinolones **(ciprofloxacin)** are predicted to increase the exposure to **venetoclax**. Avoid or adjust dose—consult product literature. Severe Theoretical
- **Ranolazine** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Venetoclax** is predicted to increase the exposure to **sirolimus**. Avoid or adjust dose. Severe Study
- **St John's wort** is predicted to decrease the exposure to **venetoclax**. Avoid. Severe Study
- **Venetoclax** is predicted to increase the exposure to statins **(atorvastatin)**. Moderate Study
- **Venetoclax** is predicted to increase the exposure to statins **(fluvastatin, pravastatin, rosuvastatin, simvastatin)**. Moderate Theoretical
- **Venetoclax** is predicted to increase the exposure to **sulfasalazine**. Moderate Theoretical
- **Venetoclax** is predicted to increase the exposure to sulfonylureas **(glibenclamide)**. Moderate Theoretical

- **Teriflunomide** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical
- **Venetoclax** is predicted to increase the exposure to thrombin inhibitors **(dabigatran)**. Avoid or adjust dose. Severe Study
- **Venetoclax** is predicted to increase the exposure to **topotecan**. Moderate Theoretical
- **Vemurafenib** is predicted to increase the exposure to **venetoclax**. Avoid or monitor for toxicity. Severe Theoretical

Venlafaxine → see SNRIs

Verapamil → see calcium channel blockers

Vericiguat → see **TABLE 8** p. 1491 (hypotension)

Vernakalant → see antiarrhythmics

Verteporfin

GENERAL INFORMATION Caution on concurrent use with other photosensitising drugs.

Vigabatrin → see antiepileptics

Vilanterol → see beta$_2$ agonists

Vildagliptin → see dipeptidylpeptidase-4 inhibitors

Vinblastine → see vinca alkaloids

Vinca alkaloids → see **TABLE 1** p. 1490 (hepatotoxicity), **TABLE 15** p. 1493 (myelosuppression), **TABLE 19** p. 1494 (ototoxicity), **TABLE 12** p. 1493 (peripheral neuropathy), **TABLE 5** p. 1491 (thromboembolism), **TABLE 9** p. 1492 (QT-interval prolongation)

vinblastine · vincristine · vindesine · vinflunine · vinorelbine

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinflunine**. Avoid. Severe Theoretical → Also see **TABLE 9** p. 1492
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. Severe Theoretical
- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical
- Antiarrhythmics **(amiodarone)** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 12** p. 1493 → Also see **TABLE 9** p. 1492
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinflunine**. Avoid. Severe Theoretical → Also see **TABLE 12** p. 1493
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 12** p. 1493
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical → Also see **TABLE 1** p. 1490 → Also see **TABLE 12** p. 1493
- Antifungals, azoles **(fluconazole, isavuconazole, itraconazole, ketoconazole, posaconazole, voriconazole)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 1** p. 1490 → Also see **TABLE 9** p. 1492
- Antifungals, azoles **(miconazole)** are predicted to increase the concentration of **vinca alkaloids**. Use with caution and adjust dose. Moderate Theoretical
- **Asparaginase** potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **asparaginase**. Severe Anecdotal → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Ciclosporin** might increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Cobicistat** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Crisantaspase** potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **crisantaspase**. Severe Anecdotal → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- **Crizotinib** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **HIV-protease inhibitors** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Idelalisib** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Imatinib** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Ivacaftor** might increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Lapatinib** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Letermovir** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Live vaccines** are predicted to increase the risk of generalised infection (possibly life-threatening) when given with **vinca alkaloids**. UKHSA advises avoid (refer to Green Book). Severe Theoretical
- Macrolides **(azithromycin)** might increase the exposure to **vinca alkaloids**. Severe Theoretical
- Macrolides **(clarithromycin, erythromycin)** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Mitotane** is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **vinflunine**. Avoid. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Mitotane** is predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. Severe Theoretical → Also see **TABLE 15** p. 1493
- **Neratinib** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 1** p. 1490
- **Neurokinin-1 receptor antagonists** are predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical
- **Nilotinib** is predicted to increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1493 → Also see **TABLE 9** p. 1492
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of vinca alkaloids **(vinblastine, vincristine)**. Severe Theoretical
- **Pegaspargase** potentially increases the risk of neurotoxicity when given with **vincristine**. **Vincristine** should be taken 3 to 24 hours before **pegaspargase**. Severe Anecdotal → Also see **TABLE 1** p. 1490 → Also see **TABLE 15** p. 1493
- **Ranolazine** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **vinflunine**. Avoid. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **vinorelbine**. Use with caution or avoid. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine)**. Severe Theoretical
- **Rucaparib** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 15** p. 1493
- **St John's wort** is predicted to decrease the exposure to vinca alkaloids **(vinblastine, vincristine, vindesine, vinorelbine)**. Severe Theoretical
- **St John's wort** is predicted to decrease the exposure to **vinflunine**. Avoid. Severe Theoretical
- **Vandetanib** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492
- **Vemurafenib** might increase the exposure to **vinca alkaloids**. Severe Theoretical → Also see **TABLE 9** p. 1492

Vincristine → see vinca alkaloids

Vindesine → see vinca alkaloids

Vinflunine → see vinca alkaloids

Vinorelbine → see vinca alkaloids

Vismodegib

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical

Vismodegib (continued)

- **Mitotane** is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical
- **St John's wort** is predicted to decrease the exposure to **vismodegib**. Avoid. Moderate Theoretical

Vitamin A

- Retinoids **(acitretin, alitretinoin, isotretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. Severe Theoretical
- Retinoids **(bexarotene)** are predicted to increase the risk of toxicity when given with **vitamin A**. Adjust dose. Moderate Theoretical
- Retinoids **(tretinoin)** are predicted to increase the risk of vitamin A toxicity when given with **vitamin A**. Avoid. Severe Study

Vitamin D substances

alfacalcidol • calcipotriol • calcitriol • colecalciferol • ergocalciferol • paricalcitol • tacalcitol

ROUTE-SPECIFIC INFORMATION Since systemic absorption can follow topical application, the possibility of interactions with topical **calcitriol** should be borne in mind.

- Antiepileptics **(carbamazepine)** are predicted to decrease the effects of **vitamin D substances**. Moderate Study
- Antiepileptics **(fosphenytoin, phenytoin)** decrease the effects of **vitamin D substances**. Moderate Study
- Antiepileptics **(phenobarbital, primidone)** are predicted to decrease the effects of **vitamin D substances**. Moderate Theoretical
- Antifungals, azoles **(clotrimazole, ketoconazole)** are predicted to decrease the exposure to **colecalciferol**. Moderate Theoretical
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **paricalcitol**. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **paricalcitol**. Moderate Study
- **Vitamin D substances** are predicted to increase the risk of toxicity when given with **digoxin**. Severe Theoretical
- **HIV-protease inhibitors** are predicted to increase the exposure to **paricalcitol**. Moderate Study
- **Idelalisib** is predicted to increase the exposure to **paricalcitol**. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **paricalcitol**. Moderate Study
- **Thiazide diuretics** increase the risk of hypercalcaemia when given with **vitamin D substances**. Moderate Theoretical

Vitamin E substances

- **Vitamin E substances** affect the exposure to **ciclosporin**. Moderate Study
- **Vitamin E substances** might increase the risk of bleeding when given with **selumetinib**. Avoid. Severe Theoretical

Volanesorsen

- **Drugs with anticoagulant effects** (see TABLE 3 p. 1490) cause bleeding, as can **volanesorsen**; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. Severe Theoretical
- **Drugs with antiplatelet effects** (see TABLE 4 p. 1490) cause bleeding, as can **volanesorsen**; concurrent use might increase the risk of developing this effect. Avoid depending on platelet count—consult product literature. Severe Theoretical

Volatile halogenated anaesthetics → see TABLE 8 p. 1491 (hypotension), TABLE 9 p. 1492 (QT-interval prolongation), TABLE 11 p. 1492 (CNS depressant effects)

desflurane • isoflurane • methoxyflurane • sevoflurane

- Antiepileptics **(phenobarbital, primidone)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. Severe Theoretical → Also see TABLE 11 p. 1492
- **Isoniazid** potentially increases the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. Severe Theoretical
- **Methylphenidate** might increase the risk of hypertension and arrhythmias when given with **volatile halogenated anaesthetics**. Avoid **methylphenidate** on day of surgery, p. 379. Severe Theoretical
- Rifamycins **(rifampicin)** potentially increase the risk of nephrotoxicity when given with **methoxyflurane**. Avoid. Severe Theoretical

Voriconazole → see antifungals, azoles

Vortioxetine → see TABLE 13 p. 1493 (serotonin syndrome), TABLE 4 p. 1490 (antiplatelet effects)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Bupropion** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- **Cinacalcet** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- Interferons **(ropeginterferon alfa)** are predicted to increase the exposure to **vortioxetine**. Moderate Theoretical
- **Mitotane** is predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study
- SSRIs **(fluoxetine, paroxetine)** are predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study → Also see TABLE 13 p. 1493 → Also see TABLE 4 p. 1490
- **Terbinafine** is predicted to increase the exposure to **vortioxetine**. Monitor and adjust dose. Moderate Study

Voxilaprevir

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- Antiepileptics **(oxcarbazepine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Ciclosporin** increases the concentration of **voxilaprevir**. Avoid. Severe Study
- **Combined hormonal contraceptives** (containing ethinylestradiol) are predicted to increase the risk of increased ALT concentrations when given with **voxilaprevir** with sofosbuvir and velpatasvir. Avoid. Severe Study
- **Dabrafenib** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to **digoxin**. Monitor and adjust dose. Severe Theoretical
- Endothelin receptor antagonists **(bosentan)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the concentration of factor XA inhibitors **(edoxaban)**. Avoid. Severe Theoretical
- HIV-protease inhibitors **(atazanavir)** boosted with ritonavir increase the concentration of **voxilaprevir**. Avoid. Severe Study
- HIV-protease inhibitors **(lopinavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- HIV-protease inhibitors **(tipranavir)** boosted with ritonavir are predicted to increase the concentration of **voxilaprevir**. Severe Theoretical
- **Mitotane** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study
- **Modafinil** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- NNRTIs **(efavirenz, nevirapine)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Proton pump inhibitors** are predicted to decrease the exposure to **voxilaprevir**. Adjust dose, see sofosbuvir with velpatasvir and voxilaprevir p. 685. Moderate Study
- Rifamycins **(rifabutin)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- Rifamycins **(rifampicin)** are predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Study

- **St John's wort** is predicted to decrease the concentration of **voxilaprevir**. Avoid. Severe Theoretical
- **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to statins **(atorvastatin)**. Adjust **atorvastatin** dose, p. 220. Moderate Theoretical
- **Voxilaprevir** with sofosbuvir and velpatasvir is predicted to increase the exposure to statins **(fluvastatin, simvastatin)**. Avoid. Moderate Theoretical
- **Voxilaprevir** with sofosbuvir and velpatasvir moderately increases the exposure to statins **(pravastatin)**. Monitor and adjust **pravastatin** dose. Moderate Study
- **Voxilaprevir** with sofosbuvir and velpatasvir markedly increases the exposure to statins **(rosuvastatin)**. Avoid. Severe Study
- **Voxilaprevir** is predicted to increase the concentration of **sulfasalazine**. Avoid. Severe Theoretical
- **Voxilaprevir** with sofosbuvir and velpatasvir potentially increases the concentration of **tenofovir disoproxil**. Severe Study
- **Voxilaprevir** with sofosbuvir and velpatasvir increases the concentration of thrombin inhibitors **(dabigatran)**. Avoid. Severe Study
- **Voxilaprevir** is predicted to increase the concentration of **topotecan**. Avoid. Severe Theoretical

Warfarin → see coumarins

Wasp venom extract

GENERAL INFORMATION Desensitising vaccines should be avoided in patients taking beta-blockers (adrenaline might be ineffective in case of a hypersensitivity reaction) or ACE inhibitors (risk of severe anaphylactoid reactions).

Xipamide → see thiazide diuretics

Xylometazoline → see sympathomimetics, vasoconstrictor

Yellow fever vaccine, live → see live vaccines

Zidovudine → see NRTIs

Zinc

ROUTE-SPECIFIC INFORMATION Interactions do not generally apply to topical use unless specified.

- Oral **zinc** might decrease the concentration of the active metabolite of oral **baloxavir marboxil**. Avoid. Severe Theoretical
- Oral **zinc** decreases the absorption of oral bisphosphonates **(alendronate)**. **Alendronate** should be taken at least 30 minutes before **zinc**. Moderate Study
- Oral **zinc** decreases the absorption of oral bisphosphonates **(clodronate)**. Avoid **zinc**. Moderate Study
- Oral **zinc** is predicted to decrease the absorption of oral bisphosphonates **(ibandronate)**. Avoid **zinc** for at least 6 hours before or 1 hour after **ibandronate**. Moderate Theoretical
- Oral **zinc** decreases the absorption of oral bisphosphonates **(risedronate)**. Separate administration by at least 2 hours. Moderate Study
- Oral **calcium salts** decrease the absorption of **zinc**. Moderate Study
- Oral **zinc** is predicted to decrease the absorption of **eltrombopag**. **Eltrombopag** should be taken 2 hours before or 4 hours after **zinc**. Severe Theoretical
- Oral **zinc** is predicted to decrease the efficacy of oral **iron** and oral **iron** is predicted to decrease the efficacy of oral **zinc**. Moderate Study
- Oral **zinc** is predicted to decrease the absorption of oral iron chelators **(deferiprone)**. Moderate Theoretical
- **Zinc** is predicted to decrease the absorption of **penicillamine**. Mild Theoretical
- **Zinc** is predicted to decrease the exposure to **quinolones**. Separate administration by 2 hours. Moderate Study
- Oral **zinc** is predicted to decrease the absorption of **tetracyclines**. Separate administration by 2 to 3 hours. Moderate Theoretical
- **Trientine** potentially decreases the absorption of **zinc**. Moderate Theoretical

Zoledronate → see bisphosphonates

Zolmitriptan → see triptans

Zolpidem → see **TABLE 11** p. 1492 (CNS depressant effects)

- Antiepileptics **(carbamazepine)** moderately decrease the exposure to **zolpidem**. Moderate Study
- **Nirmatrelvir** boosted with ritonavir is predicted to increase the concentration of **zolpidem**. Severe Theoretical
- Rifamycins **(rifampicin)** moderately decrease the exposure to **zolpidem**. Moderate Study

Zonisamide → see antiepileptics

Zopiclone → see **TABLE 11** p. 1492 (CNS depressant effects)

- Anti-androgens **(apalutamide, enzalutamide)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study
- Antiarrhythmics **(dronedarone)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- Antiepileptics **(carbamazepine, fosphenytoin, phenobarbital, phenytoin, primidone)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study → Also see **TABLE 11** p. 1492
- Antifungals, azoles **(fluconazole, isavuconazole, posaconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- Antifungals, azoles **(itraconazole, ketoconazole, voriconazole)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- Calcium channel blockers **(diltiazem, verapamil)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- **Cobicistat** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- **Crizotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- **HIV-protease inhibitors** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- **Idelalisib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- **Imatinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- **Letermovir** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- Macrolides **(clarithromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Theoretical
- Macrolides **(erythromycin)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- **Mitotane** is predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study
- Neurokinin-1 receptor antagonists **(aprepitant, netupitant)** are predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- **Nilotinib** is predicted to increase the exposure to **zopiclone**. Adjust dose. Moderate Study
- Rifamycins **(rifampicin)** are predicted to decrease the exposure to **zopiclone**. Adjust dose. Moderate Study

Zuclopenthixol → see **TABLE 8** p. 1491 (hypotension), **TABLE 9** p. 1492 (QT-interval prolongation), **TABLE 11** p. 1492 (CNS depressant effects)

- Antipsychotics, second generation **(clozapine)** can cause constipation, as can **zuclopenthixol**; concurrent use might increase the risk of developing intestinal obstruction. Severe Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 11** p. 1492
- **Zuclopenthixol** is predicted to decrease the effects of **dopamine receptor agonists**. Avoid. Moderate Theoretical → Also see **TABLE 8** p. 1491 → Also see **TABLE 9** p. 1492
- **Zuclopenthixol** is predicted to decrease the effects of **levodopa**. Avoid or monitor worsening parkinsonian symptoms. Severe Theoretical → Also see **TABLE 8** p. 1491
- **Zuclopenthixol** potentially increases the risk of neurotoxicity when given with **lithium**. Severe Anecdotal → Also see **TABLE 9** p. 1492

Appendix 2

Borderline substances

Glycogen storage disease 1757
Homocystinuria or hypermethioninaemia 1758
Maple syrup urine disease 1758
Methylmalonic or propionic acidaemia 1759
Other inborn errors of metabolism 1759
Phenylketonuria 1760
Tyrosinaemia 1763

In certain conditions some foods (and toilet preparations) have characteristics of drugs and the Advisory Committee on Borderline Substances (ACBS) advises as to the circumstances in which such substances may be regarded as drugs. Prescriptions issued in accordance with the Committee's advice and endorsed 'ACBS' will normally not be investigated.

Information

General Practitioners are reminded that the ACBS recommends products on the basis that they may be regarded as drugs for the management of specified conditions. Doctors should satisfy themselves that the products can safely be prescribed, that patients are adequately monitored and that, where necessary, expert hospital supervision is available.

Foods which may be prescribed on FP10, GP10 (Scotland), or WP10 (Wales)

All the food products listed in this appendix have ACBS approval. Some products may not be approved in all three countries. The clinical condition for which the product has been approved is included with each entry.
Note Foods included in this appendix may contain cariogenic sugars and patients should be advised to take appropriate oral hygiene measures.

Enteral feeds and supplements

For most enteral feeds and nutritional supplements, the main source of **carbohydrate** is either maltodextrin or glucose syrup; other carbohydrate sources are listed in the relevant table, below. Feeds containing residual lactose (less than 1 g lactose/100 mL formula) are described as 'clinically lactose-free' or 'lactose-free' by some manufacturers. The presence of lactose (including residual lactose) in feeds is indicated in the relevant table, below. The primary sources of **protein** or **amino acids** are included with each product entry. The **fat** or **oil** content is derived from a variety of sources such as vegetables, soya bean, corn, palm nuts, and seeds; where the fat content is derived from animal or fish sources, this information is included in the relevant table, below. The presence of medium chain triglycerides (MCT) is also noted where the quantity exceeds 30% of the fat content.

Enteral feeds and nutritional supplements can contain varying amounts of **vitamins**, **minerals**, and **trace elements**—the manufacturer's product literature should be consulted for more detailed information. Feeds containing vitamin K may affect the INR in patients receiving warfarin. The suitability of food products for patients requiring a vegan, kosher, halal, or other compliant diet should be confirmed with individual manufacturers.
Note Feeds containing more than 6 g/100 mL protein or 2 g/100 mL fibre should be avoided in children unless recommended by an appropriate specialist or dietician.

Nutritional values

Nutritional values of products vary with flavour and pack size—consult product literature.

Other conditions for which ACBS products can be prescribed

This is a list of clinical conditions for which the ACBS has approved toilet preparations.

Dermatitis, Eczema and Pruritus
Aveeno® Cream; *Aveeno*® Lotion; *E45*® Emollient Bath Oil; *E45*® Emollient Wash Cream

Disfiguring skin lesions (birthmarks, mutilating lesions, scars, vitiligo)
Covermark® classic foundation and finishing powder; *Dermacolor*® Camouflage cream and fixing powder; *Keromask*® finishing powder and masking cream; *Veil*® Cover cream and Finishing Powder. (Cleansing Creams, Cleansing Milks, and Cleansing Lotions are excluded).

Disinfectants (antiseptics)
May be prescribed on an FP10 only when ordered in such quantities and with such directions as are appropriate for the treatment of patients, but not if ordered for general hygienic purposes.

Dry mouth (xerostomia)
For patients suffering from dry mouth as a result of having (or having undergone) radiotherapy, or sicca syndrome. *AS Saliva Orthana*®; *Biotène Oralbalance*®; *Glandosane*®; *Saliveze*®

Photodermatoses (skin protection in)
Sunsense® Ultra (Ego) SPF 50+; *Uvistat*® Lipscreen SPF 50, *Uvistat*® Suncream SPF 30 and 50

Standard ACBS indications: Disease-related malnutrition, intractable malabsorption, pre-operative preparation of malnourished patients, dysphagia, proven inflammatory bowel disease, following total gastrectomy, short-bowel syndrome, bowel fistula

Table 1 Enteral feeds (non-disease specific)

Less than 5 g protein/100 mL

Enteral feeds: 1 kcal/mL and less than 5 g protein/100 mL

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 1500 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	3.8 g milk, soya proteins	13 g (sugars 0.9 g)	3.4 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except bowel fistula and pre-operative preparation of malnourished patients.	Fresubin 1500 Complete liquid: 1.5 litre = £16.50
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Original Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.0 g (sugars 0.9 g)	3.4 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except bowel fistula and pre-operative preparation of malnourished patients.	Fresubin Original Fibre liquid: 1000 ml = £11.81; 500 ml = £6.26
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Original tube feed (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.8 g (sugars 0.85 g)	3.4 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also Refsum's Disease.	Fresubin Original tube feed liquid: 1000 ml = £10.40; 1500 ml = £15.60; 500 ml = £5.95
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Jevity® (Abbott Laboratories Ltd)	Liquid (tube feed) **per 100 mL**	449 kJ (107 kcal)	4 g caseinates	14.1 g (sugars 0.25 g)	3.47 g	1.76 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except bowel fistula.	Jevity liquid: 1000 ml = £12.19; 1500 ml = £18.25; 500 ml = £6.46
Not suitable for use in child under 1 year; not recommended for use in children									
Nutrison® (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	4 g cow's milk, pea, soya, whey proteins	12.3 g (sugars 0.7 g)	3.9 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free Residual lactose	Borderline substances standard ACBS indications p. 1723.	Nutrison liquid: 500 ml = £5.91; 1000 ml = £10.38; 1500 ml = £15.59
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Multi Fibre (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	430 kJ (103 kcal)	4 g caseinate, pea, soya, whey proteins	12.3 g (sugars 0.8 g)	3.9 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutrison Multi Fibre liquid: 500 ml = £6.39; 1500 ml = £18.02; 1000 ml = £12.03
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Osmolite® (Abbott Laboratories Ltd)	Liquid (tube feed) **per 100 mL**	424 kJ (101 kcal)	4 g caseinates, soya protein isolate	13.6 g (sugars 0.6 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Osmolite liquid: 500 ml = £5.98; 1000 ml = £10.51; 1500 ml = £15.77
Not suitable for use in child under 1 year; not recommended for use in children									

SOYA PROTEIN FORMULA

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® Soya Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	3.8 g soya protein	12.1 g (sugars 4.1 g)	3.6 g	2 g	Contains fish oil, soya. Gluten-free, lactose-free	Borderline substances standard ACBS indications p. 1723 except dysphagia. Also cows' milk protein intolerance, lactose intolerance.	Fresubin Soya Fibre liquid: 500 ml = £6.05
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutrison® Soya (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	420 kJ (100 kcal)	4 g soya protein isolate	12.3 g (sugars 1 g)	3.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also cow's milk protein and lactose intolerance.	Nutrison Soya liquid: 500 ml = £6.38; 1000 ml = £12.79
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Soya Multi Fibre (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	430 kJ (103 kcal)	4 g soya protein	12.3 g (sugars 0.7 g)	3.9 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also cows' milk protein and lactose intolerance.	Nutrison Soya Multi Fibre liquid: 1500 ml = £21.27
Not suitable for use in child under 1 year; not recommended for child 1-6 years									

PEPTIDE-BASED FORMULA

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Nutrison® Peptisorb (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	425 kJ (100 kcal)	4 g whey protein hydrolysate	17.6 g (sugars 1.7 g)	1.7 g (MCT 47 %)	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also growth failure.	Nutrison Peptisorb liquid: 500 ml = £9.31; 1000 ml = £16.78
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Peptamen® liquid unflavoured (Nestle Health Science)	Liquid (sip or tube feed) **per 100 mL**	421 kJ (100 kcal)	4 g whey protein	13 g (sugars 0.48 g)	3.7 g (MCT 70 %)	Nil	Contains residual lactose, soya. Gluten-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Peptamen liquid unflavoured: 500 ml = £7.52; 1000 ml = £14.12
Not suitable for use in child under 3 years; not recommended for child under 5 years									
Survimed® OPD (Fresenius Kabi Ltd)	Liquid (sip or tube feed) **per 100 mL**	420 kJ (100 kcal)	4.5-4.7 g whey protein hydrolysate	14.1-14.3 g (sugars 1.1-5 g)	2.8 g (MCT 48-51%)	less than or equal to 0.1 g	Contains fish oil (tube feed only), residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723; also growth failure.	Survimed OPD liquid: 500 ml = £9.23; 800 ml = £13.56; 1000 ml = £17.47
Not suitable for use in child under 3 years; not recommended for child under 6 years									

Enteral feeds: Less than 1 kcal/mL and less than 5 g protein/100 mL

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Peptamen® Junior 0.6 (Nestle Health Science)	Liquid (tube feed) **per 100 mL**	254 kJ (60 kcal)	2.3 g whey protein	6.8 g (sugars 1.5 g)	2.5 g (MCT 36%)	0.8 g	Contains fish oil, residual lactose, soya. Gluten-free	Disease-related malnutrition in patients with malabsorption and/or maldigestion who have reduced energy requirements.	Peptamen Junior 0.6 liquid: 500 ml = £7.32
Not suitable for use in child under 1 year									

Enteral feeds (non-disease specific): 5 g (or more) protein/100 mL

Enteral feeds: 1.5 kcal/mL and 5 g (or more) protein/100 mL

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2250 Complete (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	630 kJ (150 kcal)	5.6 g milk, soya proteins	18 g (sugars 1.2 g)	5.8 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723	Fresubin 2250 Complete liquid: 1.5 litre = £18.42
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Energy (Fresenius Kabi Ltd)	Liquid (sip or tube feed) **per 100 mL**	630 kJ (150 kcal)	5.6 g milk, whey proteins	18.8 g (sugars 1.1-6.3)	5.8 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin Energy liquid unflavoured: 1500 ml = £19.43; 1000 ml = £12.99; 500 ml = £6.88; 200 ml = £1.40
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Fresubin® Energy Fibre Tube Feed (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	630 kJ (150 kcal)	5.6 g milk, soya proteins	18 g (sugars 1.2 g)	5.8 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin Energy Fibre liquid unflavoured: 500 ml = £7.50; 1000 ml = £14.14
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Fresubin® HP Energy (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	630 kJ (150 kcal)	7.5 g milk protein	17 g (sugars 1 g)	5.8 g (MCT 57 %)	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also CAPD and haemodialysis.	Fresubin HP Energy liquid: 500 ml = £6.95; 1000 ml = £13.09
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Fresubin® HP Energy Fibre (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	630 kJ (150 kcal)	7.5 g milk protein	16.2 g (sugars 1.11 g)	5.8 g (MCT 57%)	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia. Also CAPD and haemodialysis.	Fresubin HP Energy Fibre liquid: 500 ml = £7.65; 1000 ml = £14.42
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Jevity® 1.5kcal (Abbott Laboratories Ltd)	Liquid (tube feed) **per 100 mL**	649 kJ (154 kcal)	6.38 g caseinates, soya protein isolate	20.1 g (sugars 1.3 g)	4.9 g	2.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Jevity 1.5kcal liquid: 1500 ml = £22.51; 500 ml = £7.73; 1000 ml = £14.58
Not recommended for use in children									
Nutrison® Energy (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	630 kJ (150 kcal)	6 g caseinate, pea, soya, whey proteins	18.3 g (sugars 1.1 g)	5.8 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723	Nutrison Energy liquid: 1000 ml = £12.96; 500 ml = £6.89; 1500 ml = £19.40
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Energy Multi Fibre (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	640 kJ (153 kcal)	6 g caseinates, pea, soya, whey proteins	18.4 g (sugars 2.4 g)	5.8 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutrison Energy Multi Fibre liquid: 1000 ml = £14.39; 500 ml = £7.65; 1500 ml = £22.21
Not suitable for use in child under 1 year; not recommended for child 1-6 years									

Nutrison® Peptisorb Plus HEHP (Nutricia Ltd)	Liquid (tube feed) **per 100 ml**	631 kJ (150 kcal)	7.5 g whey protein hydrolysate	18.7 g (sugars 1.4 g)	5 g (MCT 60%)	Less than 0.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Nutrison Peptisorb Plus HEHP liquid: 1000 ml = £17.47; 500 ml = £9.28
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Nutrison® Protein Plus Energy (Nutricia Ltd)	Liquid (tube feed) **per 100 mL**	630 kJ (150 kcal)	7.5 g caseinates, pea, soya, whey proteins	16.9 g (sugars 3.3 g)	5.8 g	Less than 0.1 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutrison Protein Plus Energy liquid: 500 ml = £6.89; 1000 ml = £12.97
Not suitable for use in child under 1 year; not recommended for child 1-6 years									
Osmolite® 1.5kcal (Abbott Laboratories Ltd)	Liquid (tube feed) **per 100 mL**	634 kJ (151 kcal)	6.3 g caseinates, soya protein isolate	20.4 g (sugars 1.2 g)	4.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also continuous ambulatory peritoneal dialysis (CAPD), and haemodialysis.	Osmolite 1.5kcal tube feed liquid: 1000 ml = £13.13; 1500 ml = £19.64; 500 ml = £6.96
Not suitable for use in child under 1 year; not recommended for use in children									
Vital® 1.5kcal (Abbott Laboratories Ltd)	Liquid (sip or tube feed) **per 100 mL**	631 kJ (150 kcal)	6.8 g caseinates, whey protein hydrolysate	18.4 g (sugars 3.5 g)	5.5 g (MCT 64%)	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Vital 1.5kcal liquid: mixed berry 200 ml = £3.63; vanilla 200 ml = £3.63; 1000 ml = £18.65; cafe latte 200 ml = £3.63
Not recommended for use in children									

Enteral feeds: Less than 1.5 kcal/mL and 5 g (or more) protein/100 mL

Fresubin® 2kcal HP (Fresenius Kabi Ltd)	Liquid (tube feed) **per 100 mL**	840 kJ (200 kcal)	10 g milk protein	17.5 g (sugars 2.5 g)	10 g	Nil	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin 2kcal HP tube liquid feed: 500 ml = £8.43
Not suitable for use in child under 1 year; not recommended for child under 6 years									
Fresubin® 2kcal HP Fibre (Fresenius Kabi Ltd)	Liquid **per 100 mL**	840 kJ (200 kcal)	10 g milk protein	16.7 g (sugars 2.5 g)	10 g	1.5 g	Contains fish oil, residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin 2kcal HP Fibre tube feed liquid: 500 ml = £9.99
Not suitable for use in child under 1 year; not recommended for child under 6 years									
TwoCal® (Abbott Laboratories Ltd)	Liquid (tube feed) **per 100 mL**	837 kJ (200 kcal)	8.4 g casein, milk protein isolate	21 g hydrolysed corn starch (sugars 4.7 g)	8.9 g	1 g	Contains residual lactose, soya. Gluten-free	Adults with or at risk of disease-related malnutrition, catabolic or fluid-restricted patients, and other patients requiring a 2 kcal/mL feed.	TwoCal liquid: 1 litre = £19.08
Not recommended for use in children									

Table 2 Nutritional supplements (non-disease specific)

Nutritional supplements: less than 5 g protein/100 mL

Nutritional supplements: 1 kcal/mL and less than 5 g protein/100 mL

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Elemental 028® Extra liquid (Nutricia Ltd)	Liquid (sip feed) **per 100 mL**	360 kJ (86 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	11 g (sugars 4.7 g)	3.5 g (MCT 35%)	Nil	Gluten-free, lactose-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Elemental 028 Extra liquid: grapefruit, orange & pineapple, summer fruits 250 ml = £4.28
Not suitable for use in child under 1 year; not recommended for child 1-5 years									
Elemental 028® Extra powder (Nutricia Ltd)	Standard dilution (20% w/v) of powder **per 100 mL**	374 kJ (89 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	12 g (sugars 1.1 g)	3.5 g (MCT 35%)	Nil	Gluten-free, lactose-free	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Elemental 028 Extra powder: banana, orange, plain 100 g = £8.33
Powder provides: protein 12.5 g, carbohydrate 59 g, fat 17.5 g, energy 1871 kJ (443 kcal)/100 g Not suitable for use in child under 1 year; not recommended for child 1-5 years									
Emsogen® (Nutricia Ltd)	Standard dilution (20 % w/v) of powder **per 100 mL**	368 kJ (88 kcal)	2.5 g protein equivalent (essential and nonessential amino acids)	12.0 g (sugars 1.6 g)	3.3 g (MCT 83 %)	Nil		Short-bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistula.	Emsogen powder unflavoured: 100 gram = £8.57
Powder provides: protein 12.5 g, carbohydrate 60.0 g, fat 16.4 g, energy 1839 kJ (438 kcal)/100 g Not suitable for use in child under 1 year; not recommended for use in child under 5 years									
Ensure® (Abbott Laboratories Ltd)	Liquid (sip or tube feed) **per 100 mL**	423 kJ (100 kcal)	4 g caseinates, soya protein isolate	13.6 g (sugars 3.8 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free.	Disease-related malnutrition, intractable malabsorption, total gastrectomy, proven inflammatory bowel disease, and pre-operative preparation of patients who are undernourished.	Ensure liquid: chocolate, vanilla 250 ml = £2.64
Not suitable for use in child under 1 year; not recommended for use in children									
Fresubin® Original drink (Fresenius Kabi Ltd)	Liquid (sip feed) **per 100 mL**	420 kJ (100 kcal)	3.8 g milk, soya proteins	13.8 g (sugars 3.5 g)	3.4 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also Refsum's Disease.	Fresubin Original drink: chocolate, vanilla, blackcurrant, peach, nut 200 ml = £2.60
Not suitable for use in child under 3 years; not recommended for child 3-6 years									

Peptamen® liquid vanilla (Nestle Health Science)	Liquid (sip feed) **per 100 mL**	421 kJ (100 kcal)	4 g whey protein	12.7 g (sugars 3.3 g)	3.7 g (MCT 68 %)	Nil	Contains residual lactose, soya	Short bowel syndrome, intractable malabsorption, proven inflammatory bowel disease, bowel fistulae.	Peptamen liquid vanilla: 800 ml = £13.38
Not suitable for use in child under 3 years; not recommended for child under 5 years									
Resource® Thickened Drink (Nestle Health Science)	Liquid (sip feed) **per 100 mL**	376 kJ (89 kcal)	0.4 g	21 g (sugars 9.5 g)	less than 0.1 g	Nil	Gluten-free, lactose-free	Dysphagia.	Resource Thickened Drink custard: apple 114 ml = £0.78; orange 114 ml = £0.78; Resource Thickened Drink syrup orange: 114 ml = £0.78
Not suitable for use in child under 3 years									

Nutritional supplements: More than 1 kcal/mL and less than 5 g protein/100 mL

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Altrajuce® (Nualtra Ltd)	Liquid (sip feed) **per 100 ml**	636 kJ (150 kcal)	3.9 g milk protein	33.5 g (sugars 13.5 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Altrajuce Starter Pack liquid: 800 ml = £7.32; Altrajuce liquid: apple, blackcurrant, orange, strawberry 200 ml = £1.70
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Aymes® ActaSolve High Energy (Aymes International Ltd)	Powder **per 100 g**	2105 kJ (503 kcal)	4.8 g milk protein	63.8 g (sugar 22.5 g)	25.3 g	0.40 g	Contains lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Aymes ActaSolve High Energy Starter Pack powder: 4 sachet = £8.96; Aymes ActaSolve High Energy powder 85g sachets: banana, chocolate, strawberry, vanilla 6 sachet = £11.76
Powder 85 g reconstituted with 240 ml whole milk provides: protein 12.3 g, carbohydrate 65.6 g, fat 30.4 g, energy 2451 kJ (586 kcal) Not suitable for use in child under 3 years; use with caution in child under 6 years									
EnergieShake® Powder (Anaiah Healthcare PVT Ltd)	Powder **per 100 g**	1849 kJ (439 kcal)	16.5 g milk protein	62.1 g (sugars 26.8 g)	13.9 g	Less than 1 g	Contains lactose, soya	Borderline substances standard ACBS indications p. 1723.	EnergieShake Powder Starter Pack oral powder sachets: 285 gram = £2.88; EnergieShake Powder oral powder 57g sachets: banana, chocolate, neutral, strawberry, vanilla 4 sachet = £1.76; 7 sachet = £3.08
Powder 57 g reconstituted with 200 mL water provides: protein 9.4 g, carbohydrate 35.4 g, fat 7.9 g, energy 1054 kJ (250 kcal) Not recommended for use in child under 6 years									
Ensure® Plus Juce (Abbott Laboratories Ltd)	Liquid (sip or tube feed) **per 100 mL**	638 kJ (150 kcal)	4.8 g whey protein isolate	32.7 g (sugars 9.4 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723	Ensure Plus Juce liquid: apple, fruit punch, lemon & lime, orange, peach, strawberry 200 ml = £2.12
Not suitable for use in child under 1 year; not recommended for use in children									
Fortijuce® (Nutricia Ltd)	Liquid (sip feed) **per 100 mL**	635 kJ (150 kcal)	3.9 g milk protein	33.5 g (sugars 13.1 g)	Nil	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723; except dysphagia.	Fortijuce Starter Pack liquid: 800 ml = £8.08; Fortijuce liquid: apple, blackcurrant, forest fruits, lemon, orange, tropical 200 ml = £2.02; Fortisip Range Starter Pack liquid: 2 litre = £20.20
Not suitable for use in child under 1 year; not recommended for child 1-5 years									

Nutritional supplements: More than 1 kcal/mL and less than 5 g protein/100 mL (product list continued)

Altraplen® Energy (Nualtra Ltd)	Liquid (sip feed) **per** 100 **mL**	640 kJ (150 kcal)	6 g milk protein	18.5 g (sugars 6.5 g)	5.8 g	Nil	Gluten-free	Disease related malnutrition.	Altraplen Energy Starter Pack liquid: 800 ml = £3.96; Altraplen Energy liquid: banana, chocolate, strawberry, vanilla 200 ml = £0.89
Not suitable for use in child under 3 years; not recommended for child 3-6 years									
Altraplen® Protein (Nualtra Ltd)	Liquid (sip feed) **per** 100 **mL**	632 kJ (150 kcal)	10 g milk, soya proteins	15 g (sugars 4.6 g)	5.6 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Altraplen Protein Starter Pack liquid: 400 ml = £3.54; Altraplen Protein liquid: strawberry, vanilla 800 ml = £7.32
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Aymes® ActaCal Creme (Aymes International Ltd)	Semi-solid **per** 100 **g**	632 kJ (150 kcal)	7.5 g caseinates, milk protein	19 g (sugars 8.1 g)	4.9 g	Nil	Contains residual lactose. Gluten-free.	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Aymes ActaCal Creme Starter Pack dessert: 250 gram = £2.48; Aymes ActaCal Creme dessert: chocolate, vanilla 500 gram = £5.06
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Aymes® ActaGain Juce (Aymes International Ltd)	Liquid (sip feed) **per** 100 **mL**	637 kJ (150 kcal)	5.5 g milk protein	32 g (sugars 10.4 g)	Nil	Nil	Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Aymes ActaGain Juce Starter Pack liquid: 400 ml = £3.40; Aymes ActaGain Juce liquid: apple, orange 200 ml = £1.70
Not suitable for use in child under 3 years									
Aymes® Complete (Aymes International Ltd)	Liquid **per** 100 **mL**	630 kJ (150 kcal)	6 g milk protein	18 g (sugars 6.8 g)	6 g	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Aymes Complete Starter Pack liquid: 800 ml = £5.60; Aymes Complete liquid: banana, chocolate, strawberry, vanilla 200 ml = £1.05
Not suitable for use in child under 3 years; not recommended for child under 11 years									
EnergieShake® Complete 1.5kcal (Anaiah Healthcare PVT Ltd)	Liquid (sip feed) **per** 100 **mL**	630 kJ (150 kcal)	6 g milk proteins	18 g (sugars 6.5 g)	6 g	Nil	Contains lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723, CAPD and haemodialysis.	EnergieShake Complete 1.5kcal liquid: "banana, chocolate, strawberry, vanilla 200 ml = £1.01
Not suitable for use in child under 3 years; not recommended for child under 11 years									

EnergieShake® dessert (Anaiah Healthcare PVT Ltd)	Semi-solid **per 100 g**	632 kJ (150 kcal)	7.5 g caseinates, milk protein isolate	19 g (sugars 8.1 g)	4.9 g	Nil	Contains residual lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723 except dysphagia.	EnergieShake dessert: caramel, chocolate 375 gram = £3.30
Not suitable for use in child under 3 years									
Ensure® Plus Advance (Abbott Laboratories Ltd)	Liquid (sip or tube feed) **per 100 mL**	631 kJ (150 kcal)	9.1 g caseinates, milk protein isolate, soya protein isolate, whey protein.	16.8 g sucrose (sugars 6.8 g)	4.8 g	0.75 g	Contains soya. Gluten-free	Frail elderly people (this is defined as older than 65 years with BMI less than or equal to 23 kg/m2 where clinical assessment and nutritional screening show the individual to be at risk of undernutrition).	Ensure Plus Advance liquid: banana, chocolate, coffee, strawberry, vanilla 220 ml = £2.31
Not recommended for use in children									
Ensure® Plus milkshake style (Abbott Laboratories Ltd)	Liquid (sip or tube feed) **per 100 mL**	632 kJ (150 kcal)	6.3 g caseinates, milk protein isolate, soya protein isolate	20.2 g (sugars 6.5 g)	4.9 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also continuous ambulatory peritoneal dialysis (CAPD), haemodialysis.	Ensure Plus Commence liquid assorted: 2000 ml = £11.90; Ensure Plus milkshake style liquid: banana, chocolate, coffee, fruits of the forest, neutral, peach, raspberry, strawberry, vanilla 200 ml = £1.18
Not suitable for use in child under 1 year; not recommended for use in children									
Ensure® Plus yoghurt style (Abbott Laboratories Ltd)	Liquid (sip or tube feed) **per 100 mL**	632 kJ (150 kcal)	6.25 g milk protein isolate, whey protein	20.2 g sucrose (sugars 11.8 g)	4.92 g	Nil	Contains lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also continuous ambulatory peritoneal dialysis (CAPD), haemodialysis.	Ensure Plus yoghurt style liquid: orchard peach, strawberry swirl 200 ml = £1.23
Not suitable for use in child under 1 year; not recommended for use in children									
Fortisip® Bottle (Nutricia Ltd)	Liquid (sip feed) **per 100 mL**	625 kJ (150 kcal)	5.9 g milk proteins	18.4 g (sugars 6.7 g)	5.8 g	Nil	Contains residual lactose, soya. Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 2kcal Fibre (Fresenius Kabi Ltd)	Liquid (sip feed) **per 100 mL**	840 kJ (200 kcal)	10 g milk protein	21.7-21.8 g (sugars 3.3-5.9 g)	7.8 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also CAPD, haemodialysis.	Fresubin 2kcal Fibre drink: apricot-peach, cappuccino, chocolate, lemon, neutral, vanilla 200ml = £2.25
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 2kcal Fibre Mini (Fresenius Kabi Ltd)	Liquid (sip feed) **per 100 mL**	840 kJ (200 kcal)	10 g milk protein	21.8 g (sugars 5.9 g)	7.8 g	1.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also CAPD, haemodialysis.	Fresubin 2kcal Fibre Mini drink: chocolate, vanilla 500 ml = £5.40
Not suitable for use in child under 3 years; not recommended for child 3-6 years									

Nutritional supplements: More than 1.5 kcal/mL and 5 g (or more) protein/100 mL (product list continued)

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Fresubin® 2kcal Mini (Fresenius Kabi Ltd)	Liquid **per** 100 **mL**	840 kJ (200 kcal)	10 g milk protein	22.5 g (sugars 5.3-5.8 g)	7.8 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723; also CAPD, haemodialysis.	Fresubin 2kcal Mini drink: apricot-peach, fruits of the forest, vanilla 500 ml = £5.16
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® 3.2kcal (Fresenius Kabi Ltd)	Liquid **per** 100 **mL**	1344 kJ (320 kcal)	16 g collagen, milk proteins	28 g (sugars 10.8 g)	16 g	0.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin 3.2kcal drink: hazelnut, mango, vanilla-caramel 500 ml = £9.72
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Dessert Fruit (Fresenius Kabi Ltd)	Semi-solid **per** 100 **g**	670 kJ (160 kcal)	7 g whey protein	18.7 g sucrose (sugars 16.2 g)	5.6 g	3.5 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723 except intractable malabsorption.	Fresubin Dessert Fruit: 500 gram = £8.80
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Fresubin® Powder Extra (Fresenius Kabi Ltd)	Powder **per** 100 **g**	1764 kJ (420 kcal)	17.5 g milk, whey proteins	63 g (sugars 18.6 g)	10.9 g	Nil	Contains lactose. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Fresubin Powder Extra oral powder 62g sachets: chocolate, neutral, strawberry, vanilla 7 sachet = £5.11
Powder 62 g reconstituted with 200 ml whole milk provides: protein 17.7 g, carbohydrate 48.5 g, fat 14.8 g, energy 1658 kJ (397 kcal) Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutilis® Complete Creme Level 3 (Nutricia Ltd)	Semi-solid **per** 100 **g**	1030 kJ (245 kcal)	9.6 g milk protein	29.1 g (sugars 11.8 g)	9.4 g	3.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutilis Complete Creme Level 3 custard: chocolate, strawberry, vanilla 500 gram = £9.28
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutilis® Complete Drink Level 3 (Nutricia Ltd)	Liquid (sip feed) **per** 100 **mL**	1025 kJ (245 kcal)	9.6 g caseinates, milk proteins	29.1 g (sugars 5.4 g)	9.3 g	3.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723	Nutilis Complete Drink Level 3 liquid: chocolate, lemon tea, mango, passionfruit, strawberry, vanilla 500 ml = £9.28
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutricrem® (Nualtra Ltd)	Semi-solid **per** 100 **g**	756 kJ (180 kcal)	10 g caseinates, milk protein, soya protein	18.8 g (sugars 9.7 g)	7.2 g	Nil	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutricrem Starter Pack dessert: 500 gram = £7.04; Nutricrem dessert: chocolate orange, mint chocolate, strawberry, vanilla 500 gram = £7.32
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Nutrison® Energy Multi Fibre Vanilla (Nutricia Ltd)	Liquid **per** 100 **mL**	645 kJ (154 kcal)	6 g milk protein	18.4 g (sugars 6.8 g)	5.8 g	2.2 g	Contains residual lactose, soya. Gluten-free	Borderline substances standard ACBS indications p. 1723.	Nutrison Energy Multi Fibre Vanilla liquid: 200 ml = £2.57
Not suitable for use in child under 3 years; not recommended for child under 6 years									
Renilon® 7.5 (Nutricia Ltd)	Liquid (sip feed) **per** 100 **mL**	835 kJ (199 kcal)	7.3 g milk protein	20 g (sugars 4.8 g)	10 g	Nil	Contains residual lactose, soya	Borderline substances standard ACBS indications p. 1723 except dysphagia.	Renilon 7.5 liquid: apricot, caramel 500 ml = £10.32
Not suitable for use in child under 3 years; not recommended for child under 6 years									

Resource® 2.0 Fibre (Nestle Health Science)	Liquid (sip or tube feed) **per 100 mL**	835 kJ (200 kcal)	9 g milk protein	20 g (sugars 6 g)	8.7 g	2.5 g	Contains residual lactose	Borderline substances standard ACBS indications p. 1723.	Resource Fibre 2.0 liquid: apricot, coffee, neutral, summer fruit, strawberry, vanilla 200 ml = £2.08
Not suitable for use in child under 6 years, not recommended for child under 10 years									
SLO® Milkshake+ (SLO Drinks Ltd)	Powder **per 100 g**	1649 kJ (395 kcal)	34.7 g caseinates, whey protein, soya protein isolate	50.9 g fructose (sugars 47.1 g)	5.1 g	0.5 g	Contains lactose, soya	Dysphagia.	SLO Milkshake+ IDDSI 1 Slightly Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £6.65; SLO Milkshake+ IDDSI 2 Mildly Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £5.95; SLO Milkshake+ IDDSI 3 Moderately Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £5.95; SLO Milkshake+ IDDSI 4 Extremely Thick oral powder 50g sachets: banana, chocolate, strawberry 7 sachet = £6.65
Powder 50 g reconstituted with 200 ml whole milk provides: protein 24.2 g, carbohydrate 34.9 g, fat 10.6 g, energy 1389 kJ (334 kcal) Not suitable for use in child under 3 years									
TwoCal® Bolus (Abbott Laboratories Ltd)	Liquid (tube feed) **per 100 mL**	837 kJ (200 kcal)	8.4 g casein, milk protein isolate	21 g hydrolysed corn starch (sugars 4.65 g)	8.9 g	1 g	Contains residual lactose, soya. Gluten-free	Adults with or at risk of disease-related malnutrition, catabolic or fluid-restricted patients, and other patients requiring a 2 kcal/mL feed.	TwoCal Bolus liquid: 200 ml = £3.43
Not recommended for use in children

High-energy supplements

High-energy supplements: carbohydrate

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Polycal® liquid (Nutricia Ltd)	Liquid **per** 100 **mL**	1050 kJ (247 kcal)	Nil	61.9 g (sugars 12.2 g)	Nil	Nil		Disease related malnutrition, malabsorption states or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal liquid: neutral, orange 200 ml = £2.04
Not suitable for use in child under 3 years									
Polycal® powder (Nutricia Ltd)	Standard dilution (10% w/v) of powder **per** 100 **mL**	82 kJ (19 kcal)	Nil	4.8 g (sugars 0.3 g)	Nil	Nil		Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a high or readily available carbohydrate supplement.	Polycal powder: 400 gram = £5.15
Powder provides: protein Nil g, carbohydrate 96 g, fat Nil g, energy 1630 kJ (384 kcal)/100 g Not suitable for use in child under 1 year, not recommended for child 1-6 years									
Vitajoule® (Vitaflo International Ltd)	Powder **per** 100 g	1615 kJ (380 kcal)	Nil	95 g (sugars 9 g)	Nil	Nil		Disease related malnutrition, malabsorption states, other conditions requiring fortification with carbohydrate and as a carbohydrate source in modular feeds.	Vitajoule powder: 500 gram = £5.23

High-energy supplements: fat

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Betaquik® (Vitaflo International Ltd)	Liquid (sip feed) **per** 100 **mL**	777 kJ (189 kcal)	Nil	Nil	21 g (MCT 95%)	Nil		Ketogenic diet or conditions requiring a source of MCT.	Betaquik liquid: 225 ml = £3.83
Not suitable for use in child under 3 years									
Calogen® (Nutricia Ltd)	Liquid (sip or tube feed) **per** 100 **mL**	1850 kJ (450 kcal)	Nil	0.1 g (sugar Nil)	50 g	Nil	Banana and strawberry flavours not suitable for child under 3 years. Gluten-free, lactose-free	Disease-related malnutrition, malabsorption states, or other conditions requiring fortification with a high fat supplement, with or without fluid and electrolyte restrictions.	Calogen emulsion: banana, strawberry 200ml = £5.24; banana, neutral, strawberry 500ml = £12.89
Fresubin® 5kcal shot (Fresenius Kabi Ltd)	Liquid (sip feed) **per** 100 **mL**	2100 kJ (500 kcal)	Nil	4 g sucrose (sugars 4 g)	53.8 g	0.4 g	Gluten-free, lactose-free	Disease related malnutrition malabsorption states or other conditions requiring fortification with a high fat supplement with or without fluid or electrolyte restrictions.	Fresubin 5kcal shot drink: lemon 480 ml = £12.52; neutral 480 ml = £12.52
Not suitable for use in child under 3 years									

FAT AND CARBOHYDRATE

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Duocal® Super Soluble (Nutricia Ltd)	Powder **per** 100 g	2061 kJ (492 kcal)	Nil	72.7 g (sugars 6.5 g)	22.3 g (MCT 38 %)	Nil		Disease related malnutrition, malabsorption states or other conditions requiring fortification with a fat/carbohydrate supplement.	Duocal Super Soluble powder: 400 gram = £21.09
Scandishake® Mix (Nutricia Ltd)	Powder **per** 100 g	2120 kJ (507 kcal)	4.8 g caseinates	67 g (sugars 20.5 g)	24.5 g	Nil	Contains lactose, soya.	Disease-related malnutrition, malabsorption states or other conditions requiring fortification with a fat / carbohydrate supplement.	Scandishake Mix oral powder 85g sachets: banana, caramel, chocolate, strawberry, unflavoured, vanilla 6 sachet = £16.50
Powder 85 g reconstituted with 240 mL whole milk provides: protein 12.1 g, carbohydrate 68.2 g, fat 29.6 g, energy 2460 kJ (587 kcal) Not suitable for use in child under 3 years									

High-energy supplements: protein

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
ProSource® jelly (Nutrinovo Ltd)	Semi-solid **per** 100 **mL**	315 kJ (75 kcal)	16.9 g collagen protein, whey protein isolate	Less than 1 g	Nil	Less than 1 g	Contains porcine derivatives, residual lactose. Gluten-free	Hypoproteinaemia.	ProSource jelly: blackcurrant, fruit punch, lime, orange 118 ml = £2.07
Not recommended for child under 3 years									
ProSource® TF (Nutrinovo Ltd)	Liquid (tube feed) **per** 100 **mL**	373 kJ (98 kcal)	24.4 g collagen protein, protein equivalent (amino acids)	2.2 g (sugars Nil)	Less than 1 g	Less than 1 g	Contains bovine derivatives. Gluten-free, lactose-free	Hypoproteinaemia.	ProSource TF liquid 45ml sachets: 100 sachet = £136.08
Not recommended for child under 3 years									
Protifar® (Nutricia Ltd)	Powder **per** 100 g	1560 kJ (368 kcal)	87.2 g milk protein	less than 1.5 g	1.6 g	Nil	Contains residual lactose, soya. Gluten-free	Hypoproteinaemia.	Protifar powder: 225 gram = £10.48
Powder 2.5 g provides: protein 2.2 g, carbohydrate less that 0.04 g, fat 0.04 g, energy 39 kJ (9 kcal) Not suitable for use in child under 3 years									
Renapro Shot® (Stanningley Pharma Ltd)	Liquid (sip or tube feed) **per** 100**ml**	711 kJ (167 kcal)	33 g collagen protein	4.9 g fructose (sugars 4.9 g)	less than 0.5 g	Nil	Contains beef derivatives. Gluten-free	Hypoproteinaemia.	Renapro Shot 60ml bottles: cola, peach, wild berry 30 bottle = £69.60
Not suitable for use in child under 1 year									
Renapro® (Stanningley Pharma Ltd)	Powder **per** 100 g	1558 kJ (372 kcal)	90 g whey protein	3.4 g	1 g	Nil	Gluten-free	Dialysis, hypoproteinaemia.	Renapro powder 20g sachets: 30 sachet = £69.60
Powder 20 g reconstituted with 60-100 mL cold water provides: protein 18 g, carbohydrate 0.7 g, fat 0.2 g, energy 312 kJ (74 kcal) Not suitable for use in child under 1 year									

PROTEIN AND CARBOHYDRATE

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Dialamine® (Nutricia Ltd)	Standard dilution (20% w/v) of powder **per 100 mL**	264 kJ (62 kcal)	4.3 g protein equivalent (amino acids)	11.2 g (sugars 10.2 g)	Nil	Nil	Lactose-free	Chronic renal failure, hypoproteinaemia, wound fistula leakage with excessive protein loss, conditions requiring a controlled nitrogen intake and haemodialysis.	Dialamine powder: 400 gram = £85.69
Powder provides: protein 25 g, carbohydrate 65 g, fat Nil, energy 1530 kJ (360 kcal)/100 g Not suitable for use in child under 6 months									
ProSource® liquid (Nutrinovo Ltd)	Liquid (sip or tube feed) **per 100 mL**	1400 kJ (333 kcal)	33.3 g collagen protein, whey protein isolate	50 g (sugars 26.7 g)	Less than 1 g	Less than 1 g	Contains residual lactose, porcine derivatives. Gluten-free	Biochemically proven hypoproteinaemia.	ProSource liquid 30ml sachets: citrus berry, lemon, neutral, orange creme 100 sachet = £112.03
Not recommended for child under 3 years									
ProSource® Plus (Nutrinovo Ltd)	Liquid (sip and tube feed) **per 100 mL**	1400 kJ (333 kcal)	50 g collagen protein, whey protein isolate	36.7 g sucrose (sugars 33.3 g)	Less than 1 g	Less than 1 g	Contains porcine derivatives, residual lactose. Gluten-free	Hypoproteinaemia.	ProSource Plus liquid 30ml sachets: citrus berry, neutral, orange creme 50 sachet = £79.68; 100 sachet £159.36
Not recommended for child under 3 years									

PROTEIN, FAT, AND CARBOHYDRATE

Product	Formulation	Energy	Protein	Carbohydrate	Fat	Fibre	Special Characteristics	ACBS Indications	Presentation & Flavour
Calogen® Extra (Nutricia Ltd)	Liquid (sip or tube feed) **per 100 mL**	1650 kJ (400 kcal)	5 g caseinates, whey protein hydrolysate	4.5 g (sugars 3.5 g)	40.3 g	Nil	Contains residual lactose. Gluten-free	Disease related malnutrition, malabsorption states or other conditions requiring fortification with a high fat supplement with or without fluid restriction. Not suitable for use in children									

Feed additives

Special additives for conditions of intolerance

Glucose liquid

▸ For use as an energy supplement in sucrose-isomaltase deficiency.

LIQUID, contains syrups, hydrolysed starch, sulphur dioxide.

Glucose liquid (J M Loveridge Ltd)

280 gram (ACBS) • No NHS indicative price available | 500 gram (ACBS) • NHS indicative price = £4.39

Glucose powder

▸ For use as an energy supplement in sucrose-isomaltase deficiency.

POWDER, contains dextrose monohydrate.

Glucose powder for oral use BP 1980 (Thornton & Ross Ltd)

500 gram (ACBS) • NHS indicative price = £1.75 • Drug Tariff (Part VIIIA Category C) price = £1.75

Feed thickeners and pre-thickened drinks

Instant Carobel ®

▸ For thickening of liquids or foods in the treatment of vomiting.

POWDER, contains residual lactose.

Instant Carobel powder (Nutricia Ltd)

135 gram (ACBS) • NHS indicative price = £3.19

Multi-thick ®

▸ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains modified maize starch (sulphur dioxide and sulphites), residual lactose. Gluten-free.

Multi-thick powder (Abbott Laboratories Ltd)

250 gram (ACBS) • NHS indicative price = £4.83

Nutilis ® Clear

▸ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains guar gum, maltodextrin, xanthan gum. Gluten-free, lactose-free.

Nutilis Clear powder (Nutricia Ltd)

175 gram (ACBS) • NHS indicative price = £8.46

Nutilis Clear powder 1.25g sachets (Nutricia Ltd)

50 sachet (ACBS) • NHS indicative price = £11.65

Nutilis ® Powder

▸ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years of age.

POWDER, gluten-free and lactose-free.

Nutilis powder (Nutricia Ltd)

300 gram (ACBS) • NHS indicative price = £6.03

Osmosip ® Clear and Thick Instant Thickener

▸ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin (corn, potato), potassium chloride, xanthan gum. Gluten-free.

Osmosip Clear & Thick Instant Thickener powder (Spectral Pharmaceuticals Ltd)

133 gram (ACBS) • NHS indicative price = £3.95

Resource ® ThickenUp ®

▸ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains modified food starch (maize).

Resource ThickenUp powder (Nestle Health Science)

227 gram (ACBS) • NHS indicative price = £4.66

Resource ThickenUp powder 4.5g sachets (Nestle Health Science)

75 sachet (ACBS) • NHS indicative price = £18.49

Resource ® ThickenUp ® Clear

▸ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin (corn, potato), potassium chloride, residual lactose (tin only), xanthan gum. Gluten-free.

Resource ThickenUp Clear powder (Nestle Health Science)

127 gram (ACBS) • NHS indicative price = £8.46

Resource ThickenUp Clear powder 1.2g sachets (Nestle Health Science)

24 sachet (ACBS) • NHS indicative price = £5.28

SLO Drinks ®

▸ Nutritional supplement for patient hydration in the dietary management of dysphagia. Not suitable for children under 3 years.

POWDER, carbohydrate content varies with flavour and chosen consistency (3 consistencies available), see product literature.

SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder blackcurrant (SLO Drinks Ltd)

25 cup (ACBS) • NHS indicative price = £7.50

SLO Drink Stage 1: IDDSI 2 Mildly Thick oral powder orange (SLO Drinks Ltd)

25 cup (ACBS) • NHS indicative price = £7.50

SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder blackcurrant (SLO Drinks Ltd)

25 cup (ACBS) • NHS indicative price = £7.50

SLO Drink Stage 2: IDDSI 3 Moderately Thick oral powder orange (SLO Drinks Ltd)

25 cup (ACBS) • NHS indicative price = £7.50

Swalloweze ® Clear Instant Food & Fluid Thickener

▸ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains erythritol (E968), maltodextrin, xanthan gum (E415). Gluten-free, lactose-free.

Swalloweze Clear Instant Food & Fluid Thickener powder (Nualtra Ltd)

165 gram (ACBS) • NHS indicative price = £5.50

Swalloweze Clear Instant Food & Fluid Thickener powder 1.6g sachets (Nualtra Ltd)

48 sachet (ACBS) • NHS indicative price = £9.60

Thick and Easy ® Clear

▸ For thickening of liquids or foods in dysphagia, and for the dietary management of conditions such as stroke, Parkinson's disease, muscular dystrophy, motor neurone disease, multiple sclerosis, malignancies of the oral cavity and throat, neurological disorders caused by injury or disease. Not suitable for use in child under 3 years.

POWDER, gluten-free, lactose-free.

Thick & Easy Clear powder (Fresenius Kabi Ltd)

126 gram (ACBS) • NHS indicative price = £6.50

Thick & Easy Clear powder 1.4g sachets (Fresenius Kabi Ltd)

100 sachet (ACBS) • NHS indicative price = £24.00

Thick and Easy ® Original

▸ For thickening of liquids or foods in dysphagia. Not suitable for use in child under 3 years.

POWDER, contains maltodextrin, modified maize starch (E1442). Gluten-free, lactose-free.

Thick & Easy Original powder (Fresenius Kabi Ltd)

225 gram (ACBS) • NHS indicative price = £5.57 | 4540 gram (ACBS) • NHS indicative price = £104.20

Thixo-D ® Original

▸ For thickening of liquids or foods in dysphagia. Not recommended for child under 1 year.

POWDER, contains modified maize starch. Gluten-free, lactose-free.

Thixo-D Original powder (Ecogreen Technologies Ltd)

375 gram (ACBS) • NHS indicative price = £8.10

Flavouring preparations

FlavourPac ®

▸ For use with Vitaflo's inborn error range of protein substitutes. Not suitable for use in child under 3 years.

POWDER

FlavourPac oral powder 4g sachets blackcurrant (Vitaflo International Ltd)

30 sachet (ACBS) • NHS indicative price = £16.53

FlavourPac oral powder 4g sachets orange (Vitaflo International Ltd)

30 sachet (ACBS) • NHS indicative price = £16.53

FlavourPac oral powder 4g sachets raspberry (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £16.53

FlavourPac oral powder 4g sachets tropical (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £16.53

Nutricia Flavour Modjul ®

▶ For use with a range of unflavoured amino acid and peptide based foods for special medical purposes. Not suitable for use in child under 6 months.

POWDER

Nutricia Flavour Modjul powder blackcurrant (Nutricia Ltd)
100 gram (ACBS) • NHS indicative price = £14.19

PKU Easy® microtabs

- Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 8 years.

SOLID, protein equivalent (essential and non-essential amino acids) 70.8 g, carbohydrate 13 g, fat 3.6 g, energy 1678 kJ (396 kcal)/100 g.

PKU Easy microtabs (POA Pharma Scandinavia AB)
440 gram (ACBS) • NHS indicative price = £186.61

PKU Easy® Shake and Go

▸ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein 45 g, carbohydrate 42 g, fat 0.4 g, energy 1559 kJ (367 kcal)/100 g.

PKU Easy Shake & Go oral powder 34g sachets (POA Pharma Scandinavia AB)
30 sachet (ACBS) • NHS indicative price = £213.90

PKU express® plus

▸ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein equivalent 60 g, carbohydrate 14 g, fat 2.2 g, energy 1339 kJ (316 kcal)/100 g.

PKU express plus15 powder 25g sachets lemon (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £240.15

PKU express plus20 powder 34g sachets lemon (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £310.26

PKU express plus15 powder 25g sachets orange (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £240.15

PKU express plus20 powder 34g sachets orange (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £310.26

PKU express plus15 powder 25g sachets tropical (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £240.15

PKU express plus20 powder 34g sachets tropical (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £310.26

PKU express plus15 powder 25g sachets unflavoured (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £240.15

PKU express plus20 powder 34g sachets unflavoured (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £310.26

PKU gel®

▸ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 1 year; not recommended for child over 10 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein equivalent 41.7 g, carbohydrate 42.9 g, fat 0.05 g, energy 1440 kJ (339 kcal)/100 g.

PKU gel powder 24g sachets orange (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £166.13

PKU gel powder 24g sachets raspberry (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £166.13

PKU gel powder 24g sachets unflavoured (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £166.13

PKU GMPro®

▸ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 3 years; not recommended for child under 6 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein 30 g, carbohydrate 37.5 g, fat 11.7 g, energy 1616 kJ (384 kcal)/100 g.

PKU GMPro oral powder 33.3g sachets (Nutricia Ltd)
16 sachet (ACBS) • NHS indicative price = £95.04

PKU GMPro® LQ

▸ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 3 years, not recommended in child under 6 years. Includes added vitamins A, B C, D, E and K.
LIQUID, protein equivalent 4 g, carbohydrate 3.4 g, fat 1.6 g, energy 188 kJ (45 kcal)/100 mL

PKU GMPro LQ liquid (Nutricia Ltd)
250 ml (ACBS) • NHS indicative price = £5.94

PKU Lophlex®

▸ Nutritional supplement for the dietary management of proven phenylketonuria. Not suitable for use in child under 3 years; not recommended for child 3-8 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein 72 g, carbohydrate 9 g, fat 0.2 g, energy 1384 kJ (326 kcal)/100 g.

PKU Lophlex powder 28g sachets berries (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £319.20

PKU Lophlex powder 28g sachets neutral (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £319.20

PKU Lophlex powder 28g sachets orange (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £319.20

PKU Lophlex® LQ

▸ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 1 year; not recommended for child under 4 years. Includes added vitamins A, B, C, D, E and K.
LIQUID, protein 16 g, carbohydrate 7 g, fat 0-0.35 g, energy 391-407 kJ (92-96 kcal)/100 mL.

PKU Lophlex LQ 10 liquid berry (Nutricia Ltd)
62.5 ml (ACBS) • NHS indicative price = £5.70

PKU Lophlex LQ 10 liquid juicy berries (Nutricia Ltd)
62.5 ml (ACBS) • NHS indicative price = £5.70

PKU Lophlex LQ 10 liquid juicy citrus (Nutricia Ltd)
62.5 ml (ACBS) • NHS indicative price = £5.70

PKU Lophlex LQ 10 liquid juicy orange (Nutricia Ltd)
62.5 ml (ACBS) • NHS indicative price = £5.70

PKU Lophlex LQ 10 liquid juicy tropical (Nutricia Ltd)
62.5 ml (ACBS) • NHS indicative price = £5.70

PKU Lophlex LQ 20 liquid berry (Nutricia Ltd)
125 ml (ACBS) • NHS indicative price = £11.38

PKU Lophlex LQ 20 liquid orange (Nutricia Ltd)
125 ml (ACBS) • NHS indicative price = £11.38

PKU Lophlex LQ 20 liquid juicy berries (Nutricia Ltd)
125 ml (ACBS) • NHS indicative price = £11.38

PKU Lophlex LQ 20 liquid juicy citrus (Nutricia Ltd)
125 ml (ACBS) • NHS indicative price = £11.38

PKU Lophlex LQ 20 liquid juicy orange (Nutricia Ltd)
125 ml (ACBS) • NHS indicative price = £11.38

PKU Lophlex LQ 20 liquid juicy tropical (Nutricia Ltd)
125 ml (ACBS) • NHS indicative price = £11.38

PKU Lophlex® Sensation 20

▸ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 4 years. Includes added vitamins A, B, C, D, E and K.
SEMI-SOLID, protein 18.3 g, carbohydrate 18.5 g, fat 0.34 g, energy 648 kJ (152 kcal)/100 g.

PKU Lophlex Sensation 20 berries (Nutricia Ltd)
327 gram (ACBS) • NHS indicative price = £36.33

PKU Maxamum®

▸ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 8 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein 39 g, carbohydrate 34 g, fat less than 0.5 g, energy 1260 kJ (297 kcal)/100 g.

PKU Maxamum oral powder 50g sachets orange (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £304.50

PKU Maxamum oral powder 50g sachets unflavoured (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £304.50

PKU Maxamum powder orange (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £101.57

PKU Maxamum powder unflavoured (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £101.57

PKU Sphere®

▸ Nutritional supplement for the dietary management of phenylketonuria. Not suitable for use in child under 4 years. Includes added vitamins A, B, C, D, E, K.

POWDER, protein 56 g, carbohydrate 18 g, fat 4.7 g, energy 1432 kJ (338 kcal)/100 g.

PKU sphere15 oral powder 27g sachets chocolate (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £269.29

PKU sphere15 oral powder 27g sachets red berry (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £269.29

PKU sphere15 oral powder 27g sachets vanilla (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £269.29

PKU sphere20 oral powder 35g sachets chocolate (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £373.41

PKU sphere20 oral powder 35g sachets red berry (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £373.41

PKU sphere20 oral powder 35g sachets vanilla (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £373.41

PKU start®

▸ Nutritional supplement for the dietary management of phenylketonuria. Includes added vitamins A, B, C, D, E and K.
POWDER, protein equivalent 14.3 g, carbohydrate 51 g, fat 25 g, energy 2035 kJ (486 kcal)/100 g.

PKU start powder (Vitaflo International Ltd)
400 gram (ACBS) • NHS indicative price = £42.71

PKU Synergy®

▸ Nutritional supplement for the dietary management of phenylketonuria and hyperphenylalaninaemia. Not suitable for use in child under 10 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein equivalent 60.6 g, carbohydrate 10.7 g, fat 1 g, energy 1238 kJ (296 kcal)/100 g.

PKU Synergy oral powder 33g sachets (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £350.40

XPhe jump®

▸ Nutritional supplement for the dietary management of phenylketonuria (PKU) or hyperphenylalaninemia (HPA). Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.
LIQUID, protein equivalent 16 g, carbohydrate 6 g, fat less than 0.1 g, energy 376 kJ (89 kcal)/100 mL.

XPhe jump 10 liquid cola (metaX Institut fuer Diaetetik GmbH)
63 ml (ACBS) • NHS indicative price = £4.27

XPhe jump 10 liquid neutral (metaX Institut fuer Diaetetik GmbH)
63 ml (ACBS) • NHS indicative price = £4.27

XPhe jump 10 liquid orange (metaX Institut fuer Diaetetik GmbH)
63 ml (ACBS) • NHS indicative price = £4.27

XPhe jump 10 liquid tropical (metaX Institut fuer Diaetetik GmbH)
63 ml (ACBS) • NHS indicative price = £4.27

XPhe jump 10 liquid vanilla (metaX Institut fuer Diaetetik GmbH)
63 ml (ACBS) • NHS indicative price = £4.27

XPhe jump 10 liquid wild berries (metaX Institut fuer Diaetetik GmbH)
63 ml (ACBS) • NHS indicative price = £4.27

XPhe jump 20 liquid cola (metaX Institut fuer Diaetetik GmbH)
125 ml (ACBS) • NHS indicative price = £8.53

XPhe jump 20 liquid neutral (metaX Institut fuer Diaetetik GmbH)
125 ml (ACBS) • NHS indicative price = £8.53

XPhe jump 20 liquid orange (metaX Institut fuer Diaetetik GmbH)
125 ml (ACBS) • NHS indicative price = £8.53

XPhe jump 20 liquid tropical (metaX Institut fuer Diaetetik GmbH)
125 ml (ACBS) • NHS indicative price = £8.53

XPhe jump 20 liquid vanilla (metaX Institut fuer Diaetetik GmbH)
125 ml (ACBS) • NHS indicative price = £8.53

XPhe jump 20 liquid wild berries (metaX Institut fuer Diaetetik GmbH)
125 ml (ACBS) • NHS indicative price = £8.53

Tyrosinaemia

TYR Cooler®

▸ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.
LIQUID, protein equivalent 11.5 g, carbohydrate 5.1 g, fat 0.9 g, energy 316 kJ (75 kcal)/100 mL.

TYR orange cooler15 liquid (Vitaflo International Ltd)
130 ml (ACBS) • NHS indicative price = £13.46

TYR red cooler10 liquid (Vitaflo International Ltd)
87 ml (ACBS) • NHS indicative price = £8.29

TYR red cooler15 liquid (Vitaflo International Ltd)
130 ml (ACBS) • NHS indicative price = £13.46

TYR red cooler20 liquid (Vitaflo International Ltd)
174 ml (ACBS) • NHS indicative price = £17.33

TYR express®

▸ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 8 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein equivalent 60 g, carbohydrate 13.7 g, fat 0.2 g, energy 1260 kJ (297 kcal)/100 g.

TYR express15 oral powder 25g sachets (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £396.12

TYR express20 oral powder 34g sachets (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £511.78

TYR Lophlex®

▸ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein 71.4 g, carbohydrate 13.7 g, fat 1.5 g, energy 1488 kJ (350 kcal)/100 g.

TYR Lophlex powder 28g sachets (Nutricia Ltd)
30 sachet (ACBS) • NHS indicative price = £503.22

TYR Lophlex® LQ

▸ Nutritional supplement for the dietary management of tyrosinaemia. Includes added vitamins A, B, C, D, E and K.
LIQUID, protein 16 g, carbohydrate 7 g, fat 0.35 g, energy 407 kJ (96 kcal)/100 mL

TYR Lophlex LQ 10 liquid (Nutricia Ltd)
62.5 ml (ACBS) • NHS indicative price = £9.06

TYR Lophlex LQ 20 liquid (Nutricia Ltd)
125 ml (ACBS) • NHS indicative price = £18.70

TYR sphere® 20

▸ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein 56 g, carbohydrate 18 g, fat 4.7 g, energy 1432 kJ (338 kcal)/100 g.

TYR sphere20 oral powder 35g sachets (Vitaflo International Ltd)
30 sachet (ACBS) • NHS indicative price = £550.92

TYR® Easy Shake and Go

▸ Nutritional supplement for the dietary management of tyrosinaemia. Not suitable for use in child under 3 years. Includes added vitamins A, B, C, D, E and K.
POWDER, protein equivalent 45 g, carbohydrate 38 g, fat less than 0.5 g, energy 1542 kJ (363 kcal)/100 g.

TYR Easy Shake & Go oral powder 34g sachets (POA Pharma Scandinavia AB)
30 sachet (ACBS) • NHS indicative price = £362.00

XPHEN TYR Tyrosidon® Free AA Mix

▸ Nutritional supplement for the dietary management of tyrosinaemia where plasma methionine levels are normal.
POWDER, protein 77 g, carbohydrate 4.5 g, fat Nil, energy 1386 kJ (326 kcal)/100 g.

XPHEN TYR Tyrosidon Free AA Mix powder (Nutricia Ltd)
500 gram (ACBS) • NHS indicative price = £217.07

Appendix 3

Cautionary and advisory labels for dispensed medicines

Guidance for cautionary and advisory labels

Medicinal forms within BNF publications include code numbers of the cautionary labels that pharmacists are recommended to add when dispensing. It is also expected that pharmacists will counsel patients and carers when necessary.

Counselling needs to be related to the age, experience, background, and understanding of the individual patient or carer. The pharmacist should ensure understanding of how to take or use the medicine and how to follow the correct dosage schedule. Any effects of the medicine on co-ordination, performance of skilled tasks (e.g. driving or work), any foods or medicines to be avoided, and what to do if a dose is missed should also be explained. Other matters, such as the possibility of staining of the clothes or skin, or discolouration of urine or stools by a medicine should also be mentioned.

For some medicines there is a special need for counselling, such as an unusual method or time of administration or a potential interaction with a common food or domestic remedy, and this should be mentioned where necessary.

Original packs

Most preparations are dispensed in unbroken original packs that include further advice for the patient in the form of patient information leaflets. Label 10 may be of value where appropriate. More general leaflets advising on the administration of preparations such as eye drops, eye ointments, inhalers, and suppositories are also available.

Scope of labels

In general no label recommendations have been made for injections on the assumption that they will be administered by a healthcare professional or a well-instructed patient. The labelling is not exhaustive and pharmacists are recommended to use their professional discretion in labelling new preparations and those for which no labels are shown.

Individual labelling advice is not given on the administration of the large variety of antacids. In the absence of instructions from the prescriber, and if on enquiry the patient has had no verbal instructions, the directions given under 'Dose' should be used on the label.

It is recognised that there may be occasions when pharmacists will use their knowledge and professional discretion and decide to omit one or more of the recommended labels for a particular patient. In this case counselling is of the utmost importance. There may also be an occasion when a prescriber does not wish additional cautionary labels to be used, in which case the prescription should be endorsed 'NCL' (no cautionary labels). The exact wording that is required instead should then be specified on the prescription.

Pharmacists label medicines with various wordings in addition to those directions specified on the prescription. Such labels include 'Shake the bottle', 'For external use only', and 'Store in a cool place', as well as 'Discard.... days after opening' and 'Do not use after....', which apply particularly to antibiotic mixtures, diluted liquid and topical preparations, and to eye-drops. Although not listed in the BNF these labels should continue to be used when appropriate; indeed, 'For external use only' is a legal requirement on external liquid preparations, while 'Keep out of the reach of children' is a legal requirement on all dispensed medicines. Care should be taken not to obscure other relevant information with adhesive labelling.

It is the usual practice for patients to take standard tablets with water or other liquid and for this reason no separate label has been recommended.

The label wordings recommended by the BNF apply to medicines dispensed against a prescription. Patients should be aware that a dispensed medicine should never be taken by, or shared with, anyone other than for whom the prescriber intended it. Therefore, the BNF does not include warnings against the use of a dispensed medicine by persons other than for whom it was specifically prescribed.

The label or labels for each preparation are recommended after careful consideration of the information available. However, it is recognised that in some cases this information may be either incomplete or open to a different interpretation. The BNF will therefore be grateful to receive any constructive comments on the labelling suggested for any preparation.

Recommended label wordings

For BNF 61 (March 2011), a revised set of cautionary and advisory labels were introduced. All of the existing labels were user-tested, and the revised wording selected reflects terminology that is better understood by patients.

Wordings which can be given as separate warnings are labels 1–19, 29–30, and 32. Wordings which can be incorporated in an appropriate position in the directions for dosage or administration are labels 21–28. A label has been omitted for number 20; labels 31 and 33 no longer apply to any medicines in the BNF and have therefore been deleted.

If separate labels are used it is recommended that the wordings be used without modification.

Welsh labels

Comprehensive Welsh translations are available for each cautionary and advisory label.

Labels

1 **Warning: This medicine may make you sleepy**

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd

To be used on *preparations for children* containing antihistamines, or other preparations given to children where the warnings of label 2 on driving or alcohol would not be appropriate.

2 **Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol**

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd. Peidiwch ag yfed alcohol

To be used on *preparations for adults that can cause drowsiness*, thereby affecting coordination and the ability to drive and operate hazardous machinery; label 1 is more appropriate for children. *It is an offence to drive while under the influence of drink or drugs*.

Some of these preparations only cause drowsiness in the first few days of treatment and some only cause drowsiness in higher doses.

In such cases the patient should be told that the advice applies until the effects have worn off. However many of these preparations can produce a slowing of reaction time and a loss of mental concentration that can have the same effects as drowsiness.

Avoidance of alcoholic drink is recommended because the effects of CNS depressants are enhanced by alcohol. Strict prohibition however could lead to some patients not taking the medicine. Pharmacists should therefore explain the risk and encourage compliance, particularly in patients who may think they already tolerate the effects of alcohol (see also label 3). Queries from patients with epilepsy regarding fitness to drive should be referred back to the patient’s doctor.

Side-effects unrelated to drowsiness that may affect a patient’s ability to drive or operate machinery safely include *blurred vision, dizziness, or nausea*. In general, no label has been recommended to cover these cases, but the patient should be suitably counselled.

3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines

Rhybudd: Gall y feddyginiaeth hon eich gwneud yn gysglyd. Peidiwch â gyrru, defnyddio offer llaw neu beiriannau os yw hyn yn digwydd

To be used on *preparations containing monoamine-oxidase inhibitors*; the warning to avoid alcohol and dealcoholised (low alcohol) drink is covered by the patient information leaflet.

Also to be used as for label 2 but where alcohol is not an issue.

4 Warning: Do not drink alcohol

Rhybudd: Peidiwch ag yfed alcohol

To be used on *preparations where a reaction such as flushing may occur if alcohol is taken* (e.g. metronidazole). Alcohol may also enhance the hypoglycaemia produced by some oral antidiabetic drugs but routine application of a warning label is not considered necessary.

Patients should be advised not to drink alcohol for as long as they are receiving/using a course of medication, and in some cases for a period of time after the course is finished.

5 Do not take indigestion remedies 2 hours before or after you take this medicine

Peidiwch â chymryd meddyginiaethau camdreuliad 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used with label 25 on *preparations coated to resist gastric acid* (e.g. enteric-coated tablets). This is to avoid the possibility of premature dissolution of the coating in the presence of an alkaline pH.

Label 5 also applies to drugs such as gabapentin *where the absorption is significantly affected by antacids*. Pharmacists will be aware (from a knowledge of physiology) that the usual time during which indigestion remedies should be avoided is at least 2 hours before and after the majority of medicines have been taken; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine

Peidiwch â chymryd meddyginiaethau camdreuliad neu feddyginiaethau sy’n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl y feddyginiaeth hon

To be used on *preparations containing ofloxacin and some other quinolones, doxycycline, lymecycline, minocycline, and penicillamine*. These drugs chelate calcium, iron, and zinc and are less well absorbed when taken with calcium-containing antacids or preparations containing iron or zinc. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient.

7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine

Peidiwch â chymryd llaeth, meddyginiaethau camdreuliad, neu feddyginiaeth sy’n cynnwys haearn neu sinc, 2 awr cyn neu ar ôl cymryd y feddyginiaeth hon

To be used on *preparations containing ciprofloxacin, norfloxacin, or tetracyclines that chelate calcium, iron, magnesium, and zinc,* and are thus less available for absorption. Pharmacists will be aware (from a knowledge of physiology) that these incompatible preparations should be taken at least 2 hours apart for the majority of medicines; when a manufacturer advises a different time period, this can be followed, and should be explained to the patient. Doxycycline, lymecycline, and minocycline are less liable to form chelates and therefore only require label 6 (see above).

8 Warning: Do not stop taking this medicine unless your doctor tells you to stop

Rhybudd: Peidiwch â stopio cymryd y feddyginiaeth hon, oni bai fod eich meddyg yn dweud wrthych am stopio

To be used on *preparations that contain a drug which is required to be taken over long periods without the patient necessarily perceiving any benefit* (e.g. antituberculous drugs).

Also to be used on *preparations that contain a drug whose withdrawal is likely to be a particular hazard* (e.g. clonidine for hypertension). Label 10 (see below) is more appropriate for corticosteroids.

9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop

Gadewch yr un faint o amser rhwng pob dôs yn ystod y dydd. Parhewch i gymryd y feddyginiaeth nes bod y cyfan wedi’i orffen, oni bai eich bod yn cael cyngor i stopio

To be used on *preparations where a course of treatment should be completed* to reduce the incidence of relapse or failure of treatment.

The preparations are antimicrobial drugs given by mouth. Very occasionally, some may have severe side-effects (e.g. diarrhoea in patients receiving clindamycin) and in such cases the patient may need to be advised of reasons for stopping treatment quickly and returning to the doctor.

10 Warning: Read the additional information given with this medicine

Rhybudd: Darllenwch y wybodaeth ychwanegol gyda’r feddyginiaeth hon

To be used particularly on *preparations containing anticoagulants, lithium, and oral corticosteroids*. The appropriate treatment card should be given to the patient and any necessary explanations given.

This label may also be used on other preparations to remind the patient of the instructions that have been given.

11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds

Diogelwch eich croen rhag golau’r haul, hyd yn oed ar ddiwrnod braf ond cymylog. Peidiwch â defnyddio gwely haul

To be used on *preparations that may cause phototoxic or photoallergic reactions* if the patient is exposed to ultraviolet radiation. Exposure to high intensity ultraviolet radiation from sunray lamps and sunbeds is particularly likely to cause reactions.

12 Do not take anything containing aspirin while taking this medicine

Peidiwch â chymryd unrhyw beth sy’n cynnwys aspirin gyda’r feddyginiaeth hon

To be used on *preparations containing sulfinpyrazone* whose activity is reduced by aspirin.

Label 12 should not be used for anticoagulants since label 10 is more appropriate.

13 Dissolve or mix with water before taking

Gadewch i doddi mewn dŵr cyn ei gymryd

To be used on *preparations that are intended to be dissolved in water* (e.g. soluble tablets) or *mixed with water* (e.g. powders, granules) before use. In a few cases other liquids such as fruit juice or milk may be used.

14 This medicine may colour your urine. This is harmless

Gall y feddyginiaeth hon liwio eich dŵr. Nid yw hyn yn arwydd o ddrwg

To be used on *preparations that may cause the patient’s urine to turn an unusual colour*. These include triamterene (blue under some lights), levodopa (dark reddish), and rifampicin (red).

15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine

Rhybudd: Fflamadwy. Ar ôl rhoi'r feddyginiaeth ymlaen, cadwch yn glir o dân neu fflamau
To be used on *preparations containing sufficient flammable solvent to render them flammable if exposed to a naked flame*.

16 Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening

Rhowch y dabled i doddi dan eich tafod - peidiwch â'i lyncu. Cadwch y tabledi yn y botel yma gyda'r caead wedi'i gau yn dynn. Gofynnwch am dabledi newydd 8 wythnos ar ôl ei hagor
To be used on *glyceryl trinitrate tablets* to remind the patient not to transfer the tablets to plastic or less suitable containers.

17 Do not take more than... in 24 hours

Peidiwch â chymryd mwy na... mewn 24 awr
To be used on *preparations for the treatment of acute migraine* except those containing ergotamine, for which label 18 is used. The dose form should be specified, e.g. tablets or capsules.

It may also be used on preparations for which no dose has been specified by the prescriber.

18 Do not take more than... in 24 hours. Also, do not take more than... in any one week

Peidiwch â chymryd mwy na... mewn 24 awr. Hefyd, peidiwch â chymryd mwy na... mewn wythnos
To be used on preparations containing ergotamine. The dose form should be specified, e.g. tablets or suppositories.

19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol

Rhybudd: Bydd y feddyginiaeth hon yn eich gwneud yn gysglyd. Os ydych yn dal i deimlo'n gysglyd drannoeth, peidiwch â gyrru, defnyddio offer llaw neu beiriannau. Peidiwch ag yfed alcohol
To be used on *preparations containing hypnotics (or some other drugs with sedative effects) prescribed to be taken at night*. On the rare occasions when hypnotics are prescribed for daytime administration (e.g. nitrazepam in epilepsy), this label would clearly not be appropriate. Also to be used as an *alternative to the label 2 wording* (the choice being at the discretion of the pharmacist) *for anxiolytics prescribed to be taken at night*.

It is hoped that this wording will convey adequately the problem of residual morning sedation after taking 'sleeping tablets'.

21 Take with or just after food, or a meal

Cymerwch gyda neu ar ôl bwyd
To be used on *preparations that are liable to cause gastric irritation, or those that are better absorbed with food*.

Patients should be advised that a *small amount of food is sufficient*.

22 Take 30 to 60 minutes before food

Cymerwch 30 i 60 munud cyn bwyd
To be used on some preparations *whose absorption is thereby improved*.

Most oral antibacterials require label 23 instead (see below).

23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food

Cymerwch y feddyginiaeth hon ar stumog wag. Mae hyn yn golygu awr cyn, neu 2 awr ar ôl bwyd
To be used on *oral antibacterials whose absorption may be reduced by the presence of food and acid in the stomach*.

24 Suck or chew this medicine

Bydd angen cnoi neu sugno'r feddyginiaeth hon
To be used on *preparations that should be sucked or chewed*.

The pharmacist should use discretion as to which of these words is appropriate.

25 Swallow this medicine whole. Do not chew or crush

Llyncwch yn gyfan. Peidiwch â chnoi neu falu'n fân
To be used on *preparations that are enteric-coated or designed for modified-release*.

Also to be used on *preparations that taste very unpleasant or may damage the mouth* if not swallowed whole.

Patients should be advised (where relevant) that some modified-release preparations can be broken in half, but that the halved tablet should still be swallowed whole, and not chewed or crushed.

26 Dissolve this medicine under your tongue

Gadewch i'r feddyginiaeth hon doddi o dan y tafod
To be used on *preparations designed for sublingual use*. Patients should be advised to hold under the tongue and avoid swallowing until dissolved. The buccal mucosa between the gum and cheek is occasionally specified by the prescriber.

27 Take with a full glass of water

Cymerwch gyda llond gwydr o ddŵr
To be used on *preparations that should be well diluted* (e.g. chloral hydrate), *where a high fluid intake is required* (e.g. sulfonamides), or *where water is required to aid the action* (e.g. methylcellulose). The patient should be advised that 'a full glass' means at least 150 mL. In most cases fruit juice, tea, or coffee may be used.

28 Spread thinly on the affected skin only

Taenwch yn denau ar y croen sydd wedi'i effeithio yn unig
To be used on *external preparations* that should be applied sparingly (e.g. corticosteroids, dithranol).

29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours

Peidiwch â chymryd mwy na 2 ar unrhyw un adeg. Peidiwch â chymryd mwy nag 8 mewn 24 awr
To be used on containers of dispensed *solid dose preparations containing paracetamol for adults when the instruction on the label indicates that the dose can be taken on an 'as required' basis*. The dose form should be specified, e.g. tablets or capsules.

This label has been introduced because of the serious consequences of overdosage with paracetamol.

30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well

Yn cynnwys paracetamol. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys paracetamol tra'n cymryd y feddyginiaeth hon. Siaradwch gyda'ch meddyg ar unwaith os ydych yn cymryd gormod, hyd yn oed os ydych yn teimlo'n iawn
To be used on all containers of dispensed *preparations containing paracetamol*.

32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Yn cynnwys aspirin. Peidiwch â chymryd unrhyw beth arall sy'n cynnwys aspirin tra'n cymryd y feddyginiaeth hon
To be used on containers of dispensed *preparations containing aspirin when the name on the label does not include the word 'aspirin'*.

The correct dressing for wound management depends not only on the type of wound but also on the stage of the healing process. The principal stages of healing are: cleansing, removal of debris; granulation, vascularisation; epithelialisation. The ideal dressing for moist wound healing needs to ensure that the wound remains: moist with exudate, but not macerated; free of clinical infection and excessive slough; free of toxic chemicals, particles or fibres; at the optimum temperature for healing; undisturbed by the need for frequent changes; at the optimum pH value. As wound healing passes through its different stages, different types of dressings may be required to satisfy better one or other of these requirements. Under normal circumstances, a moist environment is a necessary part of the wound healing process; exudate provides a moist environment and promotes healing, but excessive exudate can cause maceration of the wound and surrounding healthy tissue. The volume and viscosity of exudate changes as the wound heals. There are certain circumstances where moist wound healing is not appropriate (e.g. gangrenous toes associated with vascular disease).

Advanced wound dressings are designed to control the environment for wound healing, for example to donate fluid (hydrogels), maintain hydration (hydrocolloids), or to absorb wound exudate (alginates, foams).

Practices such as the use of irritant cleansers and desloughing agents may be harmful and are largely obsolete; removal of debris and dressing remnants should need minimal irrigation with lukewarm sterile sodium chloride 0.9% solution or water.

Hydrogel, hydrocolloid, and medical grade honey dressings can be used to deslough wounds by promoting autolytic debridement; there is insufficient evidence to support any particular method of debridement for difficult-to-heal surgical wounds. Sterile larvae (maggots) are also available for biosurgical removal of wound debris.

There have been few clinical trials able to establish a clear advantage for any particular product. The choice between different dressings depends not only on the type and stage of the wound, but also on patient preference or tolerance, site of the wound, and cost. For further information, see Buyers' Guide: Advanced wound dressings (October 2008); NHS Purchasing and Supply Agency, Centre for Evidence-based Purchasing.

Prices quoted in Appendix 4 are basic NHS net prices; for further information see *Prices in the BNF* under How to use the BNF.

The table below gives suggestions for choices of primary dressing depending on the type of wound (a secondary dressing may be needed in some cases).

Basic wound contact dressings

Low adherence dressing

Low adherence dressings are used as interface layers under secondary absorbent dressings. Placed directly on the wound bed, non-absorbent, low adherence dressings are suitable for clean, granulating, lightly exuding wounds without necrosis, and protect the wound bed from direct contact with secondary dressings. Care must be taken to avoid granulation tissue growing into the weave of these dressings. Tulle dressings are manufactured from cotton or viscose fibres which are impregnated with white or yellow soft paraffin to prevent the fibres from sticking, but this is only partly successful and it may be necessary to change the

Wound contact material for different types of wounds

Wound PINK (epithelialising)		
Low Exudate	**Moderate Exudate**	
Low adherence p. 1767 Vapour-permeable film p. 1770 Soft polymer p. 1772 Hydrocolloid p. 1773	Soft ploymer p. 1772 Foam, low absorbent p. 1775 Alginate p. 1776	
Wound RED (granulating) Symptoms or signs of infection, see Wounds with signs of infection		
Low Exudate	**Moderate Exudate**	**Heavy Exudate**
Low adherence p. 1767 Soft polymer p. 1772 Hydrocolloid p. 1773 Foam, low absorbent p. 1775	Hydrocolloid-fibrous p. 1773 Foam p. 1775 Alginate p. 1776	Foam with extra absorbency p. 1775 Hydrocolloid-fibrous p. 1773 Alginate p. 1776
Wound YELLOW (Sloughy) (granulating) Symptoms or signs of infection, see Wounds with signs of infection		
Low Exudate	**Moderate Exudate**	**Heavy Exudate**
Hydrogel p. 1770 Hydrocolloid p. 1773	Hydrocolloid-fibrous p. 1773 Alginate p. 1776	Hydrocolloid-fibrous p. 1773 Alginate p. 1776 Capillary-action p. 1776
Wound BLACK (Necrotic/ Eschar) Consider mechanical debridement alongside autolytic debridement		
Low Exudate	**Moderate Exudate**	**Heavy Exudate**
Hydrogel p. 1770 Hydrocolloid p. 1773	Hydrocolloid p. 1773 Hydrocolloid-fibrous p. 1773 Foam p. 1775	Seek advice from wound care specialist
Wounds with signs of infection **Consider systemic antibacterials if appropriate;** also consider odour-absorbent dressings. For malodourous wounds with slough or necrotic tissue, consider mechanical or autolytic debridement		
Low Exudate	**Moderate Exudate**	**Heavy Exudate**
Low adherence with honey p. 1777 Low adherence with iodine p. 1778 Low adherence with silver p. 1778 Hydrocolloid with silver p. 1779	Hydrocolloid-fibrous with silver p. 1779 Foam with silver p. 1779 Alginate with silver p. 1778 Honey-topical p. 1777 Cadexomer-iodine p. 1778	Hydrocolloid-fibrous with silver p. 1779 Foam extra absorbent, with silver p. 1779 Alginate with honey p. 1777 Alginate with silver p. 1778

Note In each section of this table the dressings are listed in order of increasing absorbency.
Some wound contact (primary) dressings require a secondary dressing

dressings frequently. The paraffin reduces absorbency of the dressing. Dressings with a reduced content (light loading) of soft paraffin are less liable to interfere with absorption; dressings with 'normal loading' (such as Jelonet ®) have been used for skin graft transfer. Knitted viscose primary dressing is an alternative to tulle dressings for exuding wounds; it can be used as the initial layer of multi-layer compression bandaging in the treatment of venous leg ulcers.

Knitted polyester primary dressing

Atrauman

Non-adherent knitted polyester primary dressing impregnated with neutral triglycerides

Atrauman dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.83, 20cm × 30cm= £2.28, 5cm × 5cm= £0.35, 7.5cm × 10cm= £0.36

Knitted viscose primary dressing

N-A Dressing

Warp knitted fabric manufactured from a bright viscose monofilament.

N-A dressing (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.67, 9.5cm × 9.5cm= £0.35

N-A Ultra

Warp knitted fabric manufactured from a bright viscose monofilament.

N-A Ultra dressing (Systagenix Wound Management Ltd) 19cm × 9.5cm= £0.65, 9.5cm × 9.5cm= £0.34

Profore

Warp knitted fabric manufactured from a bright viscose monofilament.

Profore (Smith & Nephew Healthcare Ltd) wound contact layer 14cm × 20cm= £0.34

Tricotex

Warp knitted fabric manufactured from a bright viscose monofilament.

Tricotex dressing (Smith & Nephew Healthcare Ltd) 9.5cm × 9.5cm= £0.36

Paraffin Gauze Dressing

Cuticell

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

Cuticell (BSN medical Ltd) Classic dressing 10cm × 10cm= £0.31

Jelonet

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

Jelonet (Smith & Nephew Healthcare Ltd) dressing 10cm × 10cm= £0.44

Neotulle

(Tulle Gras). Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with white or yellow soft paraffin; for light or normal loading

Neotulle (Neomedic Ltd) dressing 10cm × 10cm= £0.29

Absorbent dressings

Perforated film absorbent dressings are suitable only for wounds with mild to moderate amounts of exudate; they are not appropriate for leg ulcers or for other lesions that produce large quantities of viscous exudate. Dressings with an absorbent cellulose or polymer wadding layer are suitable for use on moderately to heavily exuding wounds.

Absorbent cellulose dressing

CelluDress

Absorbent Cellulose Dressing with Fluid Repellent Backing

CelluDress dressing (Medicareplus International Ltd) 10cm × 10cm= £0.19, 10cm × 15cm= £0.20, 10cm × 20cm= £0.22, 15cm × 20cm= £0.30, 20cm × 25cm= £0.40, 20cm × 30cm= £0.85

Eclypse

Absorbent Cellulose Dressing with Fluid Repellent Backing

Eclypse (Advancis Medical) Boot dressing 60cm × 70cm= £14.42, dressing 15cm × 15cm= £1.01, 20cm × 30cm= £2.24, 60cm × 40cm= £8.53

Exu-Dry

Absorbent Cellulose Dressing with Fluid Repellent Backing

Exu-Dry dressing (Smith & Nephew Healthcare Ltd) 10cm × 15cm= £1.20, 15cm × 23cm= £2.45, 23cm × 38cm= £5.69

Mesorb

Cellulose wadding pad with gauze wound contact layer and non-woven repellent backing

Mesorb dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £0.65, 10cm × 15cm= £0.85, 10cm × 20cm= £1.05, 15cm × 20cm= £1.49, 20cm × 25cm= £2.35, 20cm × 30cm= £2.67

Zetuvit E

Absorbent Cellulose Dressing with Fluid Repellent Backing; sterile or non-sterile

Zetuvit E (Paul Hartmann Ltd) non-sterile dressing 10cm × 10cm= £0.07, 10cm × 20cm= £0.09, 20cm × 20cm= £0.15, 20cm × 40cm= £0.29, sterile dressing 10cm × 10cm= £0.23, 10cm × 20cm= £0.26, 20cm × 20cm= £0.41, 20cm × 40cm= £1.16

Absorbent perforated dressing

Adpore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Adpore dressing (Medicareplus International Ltd) 10cm × 10cm= £0.10, 10cm × 15cm= £0.16, 10cm × 20cm= £0.30, 10cm × 25cm= £0.34, 10cm × 30cm= £0.42, 10cm × 35cm= £0.50, 7cm × 8cm= £0.08

Cosmopore E

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Cosmopor E dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.48, 10cm × 25cm= £0.59, 10cm × 35cm= £0.82, 5cm × 7.2cm= £0.09, 8cm × 10cm= £0.18, 8cm × 15cm= £0.29

Cutiplast Steril

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Cutiplast Steril dressing (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.33, 10cm × 25cm= £0.34, 10cm × 30cm= £0.45, 8cm × 10cm= £0.11, 8cm × 15cm= £0.26

Leukomed

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Leukomed dressing (BSN medical Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.52, 10cm × 30cm= £0.67, 10cm × 35cm= £0.77, 5cm × 7.2cm= £0.09, 8cm × 10cm= £0.20, 8cm × 15cm= £0.34

Medipore + Pad

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Medipore + Pads dressing (3M Health Care Ltd) 10cm × 10cm= £0.16, 10cm × 15cm= £0.25, 10cm × 20cm= £0.38, 10cm × 25cm= £0.47, 10cm × 35cm= £0.65, 5cm × 7.2cm= £0.08

Medisafe

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Medisafe dressing (Neomedic Ltd) 6cm × 8cm= £0.08, 8cm × 10cm= £0.13, 8cm × 12cm= £0.23, 9cm × 15cm= £0.29, 9cm × 20cm= £0.34, 9cm × 25cm= £0.36

Mepore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Mepore dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £0.22, 11cm × 15cm= £0.37, 7cm × 8cm= £0.11, 9cm × 20cm= £0.46, 9cm × 25cm= £0.63, 9cm × 30cm= £0.72, 9cm × 35cm= £0.79

PremierPore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

PremierPore dressing (Shermond) 10cm × 10cm= £0.12, 10cm × 15cm= £0.18, 10cm × 20cm= £0.32, 10cm × 25cm= £0.36, 10cm × 30cm= £0.45, 10cm × 35cm= £0.52, 5cm × 7cm= £0.05

Primapore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Primapore dressing (Smith & Nephew Healthcare Ltd) 10cm × 20cm= £0.46, 10cm × 25cm= £0.53, 10cm × 30cm= £0.67, 10cm × 35cm= £1.03, 6cm × 8.3cm= £0.19, 8cm × 10cm= £0.20, 8cm × 15cm= £0.35

Softpore

Low-adherence primary dressing consisting of viscose and rayon absorbent pad with adhesive border.

Softpore dressing (Richardson Healthcare Ltd) 10cm × 10cm= £0.13, 10cm × 15cm= £0.20, 10cm × 20cm= £0.35, 10cm × 25cm= £0.40, 10cm × 30cm= £0.49, 10cm × 35cm= £0.58, 6cm × 7cm= £0.06

Absorbent perforated plastic film faced dressing

Absopad

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Absopad dressing (Medicareplus International Ltd) 10cm × 10cm= £0.13, 20cm × 10cm= £0.28

Askina Pad

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Askina Pad dressing (B.Braun Medical Ltd) 10cm × 10cm= £0.22

Melolin

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Melolin dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £0.29, 20cm × 10cm= £0.57, 5cm × 5cm= £0.18

Skintact

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Skintact dressing (Robinson Healthcare) 10cm × 10cm= £0.17, 20cm × 10cm= £0.34, 5cm × 5cm= £0.10

Solvaline N

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Solvaline N dressing (Lohmann & Rauscher) 10cm × 10cm= £0.19, 20cm × 10cm= £0.38, 5cm × 5cm= £0.11

Telfa

Low-adherence primary dressing consisting of 3 layers—perforated polyester film wound contact layer, absorbent cotton pad, and hydrophobic backing.

Telfa dressing (H & R Healthcare Ltd) 10cm × 7.5cm= £0.16, 15cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.29, 7.5cm × 5cm= £0.12

Super absorbent cellulose and polymer primary dressing

Curea P1

Super absorbent cellulose and polymer primary dressing.

Curea P1 dressing (Regen Medical Ltd) 10cm × 10cm square= £1.56, 10cm × 20cm rectangular= £2.08, 10cm × 30cm rectangular=

£3.32, 12cm × 12cm square= £2.67, 20cm × 20cm square= £4.03, 20cm × 30cm rectangular= £4.68, 7.5cm × 7.5cm square= £1.50

Curea P2
Super absorbent cellulose and polymer primary dressing (non-adherent)
Curea P2 dressing (Regen Medical Ltd) 10cm × 20cm rectangular= £3.12, 11cm × 11cm square= £2.12, 20cm × 20cm square= £5.59, 20cm × 30cm rectangular= £7.28

Cutisorb Ultra
Super absorbent cellulose and polymer primary dressing
Cutisorb Ultra dressing (BSN medical Ltd) 10cm × 10cm square= £2.13, 10cm × 20cm rectangular= £3.56, 20cm × 20cm square= £6.68, 20cm × 30cm rectangular= £10.06

DryMax Extra
Super absorbent cellulose and polymer primary dressing
DryMax Super dressing (Espere Healthcare Ltd) 10cm × 10cm square= £0.88, 10cm × 20cm rectangular= £1.05, 20cm × 20cm square= £1.87, 20cm × 30cm rectangular= £2.36

Zetuvit Plus
Super absorbent cellulose primary dressing
Zetuvit Plus dressing (Paul Hartmann Ltd) 10cm × 10cm= £0.86, 10cm × 20cm= £1.19, 15cm × 20cm= £1.36, 20cm × 25cm= £1.86, 20cm × 40cm= £2.88

Super absorbent hydroconductive dressing

Drawtex
Super absorbent hydroconductive dressing with absorbent, cross-action structures of viscose, polyester and cotton
Drawtex dressing (Martindale Pharmaceuticals Ltd) 10cm × 1.3m= £16.00, 10cm × 10cm= £2.24, 10cm × 1m= £16.00, 15cm × 20cm= £6.00, 20cm × 1m= £25.00, 20cm × 20cm= £6.98, 5cm × 5cm= £0.95, 7.5cm × 1m= £15.50, 7.5cm × 7.5cm= £1.77

Advanced wound dressings

Advanced wound dressings can be used for both acute and chronic wounds. Categories for dressings in this section start with the least absorptive, moisture-donating hydrogel dressings, followed by increasingly more absorptive dressings. These dressings are classified according to their primary component; some dressings are comprised of several components.

Hydrogel dressings

Hydrogel dressings are most commonly supplied as an amorphous, cohesive topical application that can take up the shape of a wound. A secondary, non-absorbent dressing is needed. These dressings are generally used to donate liquid to dry sloughy wounds and facilitate autolytic debridement of necrotic tissue; some also have the ability to absorb very small amounts of exudate. Hydrogel products that do not contain propylene glycol should be used if the wound is to be treated with larval therapy. Hydrogel sheets have a fixed structure and limited fluid-handling capacity; hydrogel sheet dressings are best avoided in the presence of infection, and are unsuitable for heavily exuding wounds.

Hydrogel application (amorphous)

ActivHeal Hydrogel
Hydrogel containing guar gum and propylene glycol
ActivHeal (Advanced Medical Solutions Ltd) Hydrogel dressing= £1.43

Cutimed
Hydrogel
Cutimed (BSN medical Ltd) Gel dressing= £3.22

Flexigran
Hydrogel containing modified starch and glycerol
Flexigran (A1 Pharmaceuticals) Gel dressing= £1.90

GranuGel
Hydrogel containing carboxymethylcellulose, pectin and propylene glycol
GranuGEL (ConvaTec Ltd) Hydrocolloid Gel dressing= £2.48

Intrasite Gel
Hydrogel containing modified carmellose polymer and propylene glycol
IntraSite (Smith & Nephew Healthcare Ltd) Gel dressing= £3.82

Nu-Gel
Hydrogel containing alginate and propylene glycol
Nu-Gel (Systagenix Wound Management Ltd) dressing= £2.16

Purilon Gel
Hydrogel containing carboxymethylcellulose and calcium alginate
Purilon (Coloplast Ltd) Gel dressing= £2.42

Hydrogel sheet dressings

ActiFormCool
Hydrogel dressing
ActiFormCool sheet (L&R Medical UK Ltd) 10cm × 10cm square= £2.81, 10cm × 15cm rectangular= £4.03, 20cm × 20cm square= £8.45, 5cm × 6.5cm rectangular= £1.91

Aquaflo
Hydrogel dressing
Aquaflo (Covidien (UK) Commercial Ltd) sheet 7.5cm discs= £2.60

Coolie
Hydrogel dressing (without adhesive border)
Coolie (Zeroderma Ltd) sheet 7cm discs= £1.96

Gel FX
Hydrogel dressing (without adhesive border)
Gel FX sheet (Synergy Health (UK) Ltd) 10cm × 10cm square= £1.60, 15cm × 15cm square= £3.20

Geliperm
Hydrogel sheets
Geliperm (Geistlich Sons Ltd) sheet 10cm × 10cm square= £2.53

Intrasite Conformable
Soft non-woven dressing impregnated with Intrasite® gel
IntraSite Conformable dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £1.92, 10cm × 20cm rectangular= £2.60, 10cm × 40cm rectangular= £4.64

Novogel
Glycerol-based hydrogel sheets (standard or thin)
Novogel sheet (Ford Medical Associates Ltd) 10cm × 10cm square= £3.18, 15cm × 20cm rectangular= £6.07, 20cm × 40cm rectangular= £11.56, 30cm × 30cm (0.15cm thickness) square= £12.71, (0.30cm thickness) square= £13.47, 5cm × 7.5cm rectangular= £1.99, 7.5cm diameter circular= £5.84

SanoSkin NET
Hydrogel sheet (without adhesive border)
SanoSkin NET (Ideal Medical Solutions Ltd) sheet 8.5cm × 12cm rectangular= £2.28

Vacunet
Non-adherent, hydrogel coated polyester net dressing
Vacunet dressing (Protex Healthcare Ltd) 10cm × 10cm square= £1.93, 10cm × 15cm rectangular= £2.86

Sodium hyaluronate dressings

The hydrating properties of sodium hyaluronate promote wound healing, and dressings can be applied directly to the wound, or to a primary dressing (a secondary dressing should also be applied). The iodine and potassium iodide in these dressings prevent the bacterial decay of sodium hyaluronate in the wound.
Hyiodine® should be used with caution in thyroid disorders.

Hyiodine
Sodium hyaluronate 1.5%, potassium iodide 0.15%, iodine 0.1%, in a viscous solution

Vapour-permeable films and membranes

Vapour-permeable films and membranes allow the passage of water vapour and oxygen but are impermeable to water and micro-organisms, and are suitable for lightly exuding wounds. They are highly conformable, provide protection, and a moist healing environment; transparent film dressings permit constant observation of the wound. Water vapour loss can occur at a slower rate than exudate is generated, so that fluid accumulates under the dressing, which can lead to tissue maceration and to wrinkling at the adhesive contact site (with risk of bacterial entry). Newer versions of these dressings have increased moisture vapour permeability.

Despite these advances, vapour-permeable films and membranes are unsuitable for infected, large heavily exuding wounds, and chronic leg ulcers. Vapour-permeable films and membranes are suitable for partial-thickness wounds with minimal exudate, or wounds with eschar. Most commonly, they are used as a secondary dressing over alginates or hydrogels; film dressings can also be used to protect the fragile skin of patients at risk of developing minor skin damage caused by friction or pressure.

Non-woven fabric dressing with viscose-rayon pad

Niko Fix

For intravenous and subcutaneous catheter sites

Niko Fix dressing (Unomedical Ltd) 7cm × 8.5cm= £0.20

Vapour-permeable Adhesive Film Dressing (Semi-permeable Adhesive Dressing)

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces.

Askina Derm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Askina Derm dressing (B.Braun Medical Ltd) 10cm × 12cm= £1.16, 10cm × 20cm= £2.20, 15cm × 20cm= £2.66, 20cm × 30cm= £4.76, 6cm × 7cm= £0.40

Dressfilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Dressfilm dressing (St Georges Medical Ltd) 15cm × 20cm= £1.90

Hydrofilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Hydrofilm dressing (Paul Hartmann Ltd) 10cm × 12.5cm= £0.44, 10cm × 15cm= £0.56, 10cm × 25cm= £0.86, 12cm × 25cm= £0.91, 15cm × 20cm= £1.02, 20cm × 30cm= £1.69, 6cm × 7cm= £0.24

Hypafix Transparent

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Hypafix Transparent dressing (BSN medical Ltd) 10cm × 2m= £9.14

Leukomed T

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Leukomed T dressing (BSN medical Ltd) 10cm × 12.5cm= £1.09, 11cm × 14cm= £1.32, 15cm × 20cm= £2.53, 15cm × 25cm= £2.70, 7.2cm × 5cm= £0.40, 8cm × 10cm= £0.75

Mepitel Film

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Mepitel Film dressing (Molnlycke Health Care Ltd) 10.5cm × 12cm= £1.37, 10.5cm × 25cm= £2.66, 15.5cm × 20cm= £3.38

Mepore Film

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Mepore Film dressing (Molnlycke Health Care Ltd) 10cm × 12cm= £1.28, 10cm × 25cm= £2.50, 15cm × 20cm= £3.18, 6cm × 7cm= £0.48

OpSite Flexifix

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

OpSite Flexifix dressing (Smith & Nephew Healthcare Ltd) 10cm × 1m= £7.03, 5cm × 1m= £4.17

OpSite Flexigrid

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

OpSite Flexigrid dressing (Smith & Nephew Healthcare Ltd) 12cm × 12cm= £1.20, 15cm × 20cm= £3.04, 6cm × 7cm= £0.42

ProtectFilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

ProtectFilm dressing (Wallace, Cameron & Company Ltd) 10cm × 12cm= £0.20, 15cm × 20cm= £0.40, 6cm × 7cm= £0.11

Suprasorb F

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Suprasorb F dressing (Lohmann & Rauscher) 10cm × 12cm= £0.83, 15cm × 20cm= £2.58, 5cm × 7cm= £0.34

Tegaderm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Tegaderm Film dressing (3M Health Care Ltd) 12cm × 12cm= £1.13, 15cm × 20cm= £2.44, 6cm × 7cm= £0.39

Tegaderm diamond

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Tegaderm Diamond dressing (3M Health Care Ltd) 10cm × 12cm= £1.23, 6cm × 7cm= £0.45

Vellafilm

Extensible, waterproof, water vapour-permeable polyurethane film coated with synthetic adhesive mass; transparent. Supplied in single-use pieces

Vellafilm dressing (Advancis Medical) 12cm × 12cm= £1.15, 12cm × 35cm= £2.88, 15cm × 20cm= £2.20

Vapour-permeable Adhesive Film Dressing with absorbent pad

Adpore Ultra

Film dressing with adsorbent pad

Adpore Ultra dressing (Medicareplus International Ltd) 10cm × 10cm= £0.14, 10cm × 15cm= £0.22, 10cm × 20cm= £0.33, 10cm × 25cm= £0.35, 10cm × 30cm= £0.52, 7cm × 8cm= £0.12

Vapour-permeable Adhesive Film Dressing with adsorbent pad

Alldress

Film dressing with adsorbent pad

Alldress dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £1.01, 15cm × 15cm= £2.19, 15cm × 20cm= £2.71

Clearpore

Film dressing with adsorbent pad

Clearpore dressing (Richardson Healthcare Ltd) 10cm × 10cm= £0.20, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.40, 10cm × 30cm= £0.65, 6cm × 10cm= £0.15, 6cm × 7cm= £0.12

Hydrofilm Plus

Film dressing with adsorbent pad

Hydrofilm Plus dressing (Paul Hartmann Ltd) 10cm × 20cm= £0.48, 10cm × 25cm= £0.64, 10cm × 30cm= £0.73, 7.2cm × 5cm= £0.19, 9cm × 10cm= £0.29, 9cm × 15cm= £0.32

Leukomed T Plus

Film dressing with adsorbent pad

Leukomed T plus dressing (BSN medical Ltd) 10cm × 20cm= £1.44, 10cm × 25cm= £1.61, 10cm × 30cm= £2.70, 10cm × 35cm= £3.28, 7.2cm × 5cm= £0.29, 8cm × 10cm= £0.57, 8cm × 15cm= £0.86

Mepore Film & Pad

Film dressing with adsorbent pad

Mepore Film & Pad dressing (Molnlycke Health Care Ltd) 4cm × 5cm= £0.25, 5cm × 7cm= £0.26, 9cm × 10cm= £0.65, 9cm × 15cm= £0.96, 9cm × 20cm= £1.42, 9cm × 25cm= £1.57, 9cm × 30cm= £2.10, 9cm × 35cm= £2.62

Mepore Ultra

Film dressing with adsorbent pad

Mepore Ultra dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £0.84, 11cm × 15cm= £1.23, 7cm × 8cm= £0.42, 9cm × 20cm= £1.58, 9cm × 25cm= £1.74, 9cm × 30cm= £2.88

OpSite Plus

Film dressing with adsorbent pad

OpSite Plus dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.28, 10cm × 20cm= £2.15, 10cm × 35cm= £3.56, 6.5cm × 5cm= £0.35, 8.5cm × 9.5cm= £0.94

OpSite Post-op

Film dressing with adsorbent pad

OpSite Post-Op dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.25, 10cm × 20cm= £2.11, 10cm × 25cm= £2.65, 10cm × 30cm= £3.14, 10cm × 35cm= £3.50, 8.5cm × 15.5cm= £1.28, 8.5cm × 9.5cm= £0.92

Pharmapore-PU

Film dressing with adsorbent pad

Pharmapore-PU dressing (Wallace, Cameron & Company Ltd) 10cm × 25cm= £0.38, 10cm × 30cm= £0.58, 8.5cm × 15.5cm= £0.20

PremierPore VP

Film dressing with adsorbent pad

PremierPore VP dressing (Shermond) 10cm × 10cm= £0.16, 10cm × 15cm= £0.24, 10cm × 20cm= £0.36, 10cm × 25cm= £0.38, 10cm × 30cm= £0.57, 10cm × 35cm= £0.70, 5cm × 7cm= £0.13

Tegaderm

Film dressing with adsorbent pad

Tegaderm + Pad dressing (3M Health Care Ltd) 5cm × 7cm= £0.27, 9cm × 10cm= £0.67, 9cm × 15cm= £0.98, 9cm × 20cm= £1.44, 9cm × 25cm= £1.62, 9cm × 35cm= £2.68

Tegaderm Absorbent Clear

Film dressing with clear acrylic polymer oval-shaped pad or rectangular-shaped pad

Tegaderm Absorbent Clear Acrylic dressing (3M Health Care Ltd) 11.1cm × 12.7cm oval= £4.24, 14.2cm × 15.8cm oval= £5.96, 14.9cm × 15.2cm rectangular= £8.94, 20cm × 20.3cm rectangular= £14.35, 7.6cm × 9.5cm oval= £3.27

Vapour–permeable transparent adhesive film dressing

IV3000

For intravenous and subcutaneous catheter sites

IV3000 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12cm= £1.49, 5cm × 6cm= £0.45, 6cm × 7cm= £0.59, 7cm × 9cm= £0.78, 9cm × 12cm= £1.55

Mepore IV

For intravenous and subcutaneous catheter sites

Mepore IV dressing (Molnlycke Health Care Ltd) 10cm × 11cm= £1.13, 5cm × 5.5cm= £0.32, 8cm × 9cm= £0.42

Pharmapore-PU IV

For intravenous and subcutaneous catheter sites

Pharmapore-PU-I.V dressing (Wallace, Cameron & Company Ltd) 6cm × 7cm= £0.08, 7cm × 8.5cm= £0.07, 7cm × 9cm= £0.17

Tegaderm IV

For intravenous and subcutaneous catheter sites

Tegaderm IV Advanced dressing with securing tapes (3M Health Care Ltd) 10cm × 15.5cm= £1.68, 7cm × 8.5cm= £0.60

Vapour–permeable transparent film dressing with adhesive foam border

Central Gard

For intravenous and subcutaneous catheter sites

Central Gard dressing (Unomedical Ltd) 16cm × 7cm= £1.00, 16cm × 8.8cm= £1.10

EasI-V

For intravenous and subcutaneous catheter sites

EasI-V (ConvaTec Ltd) dressing 7cm × 7.5cm= £0.38

Soft polymer dressings

Dressings with soft polymer, often a soft silicone polymer, in a non-adherent or gently adherent layer are suitable for use on lightly to moderately exuding wounds. For moderately to heavily exuding wounds, an absorbent secondary dressing can be added, or a soft polymer dressing with an absorbent pad can be used. Wound contact dressings coated with soft silicone have gentle adhesive properties and can be used on fragile skin areas or where it is beneficial to reduce the frequency of primary dressing changes. Soft polymer dressings should not be used on heavily bleeding wounds; blood clots can cause the dressing to adhere to the wound surface. For silicone keloid dressings see under Specialised dressings.

Cellulose dressings

Sorbion Sachet Border

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope, with adhesive border

Cutimed Sorbion Sachet Border dressing (BSN medical Ltd) 10cm × 10cm square= £3.14, 15cm × 15cm square= £4.78, 25cm × 15cm rectangular= £7.45

Sorbion Sachet EXTRA

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

Cutimed Sorbion Sachet Extra dressing (BSN medical Ltd) 10cm × 10cm= £2.40, 20cm × 10cm= £3.98, 20cm × 20cm= £7.46, 30cm × 20cm= £10.65, 5cm × 5cm= £1.55, 7.5cm × 7.5cm= £1.90

Sorbion Sachet Multi Star

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope

Cutimed Sorbion Sachet Multi Star dressing (BSN medical Ltd) 14cm × 14cm= £5.21, 8cm × 8cm= £3.19

Sorbion Sachet S Drainage

Absorbent polymers in cellulose matrix, hypoallergenic polypropylene envelope ('v' shaped dressing)

Cutimed Sorbion Sachet S drainage dressing (BSN medical Ltd) 10cm × 10cm= £2.81

Suprasorb X

Biosynthetic cellulose fibre dressing

Suprasorb X dressing (Lohmann & Rauscher) 14cm × 20cm rectangular= £8.89, 2cm × 21cm rope= £6.91, 5cm × 5cm square= £2.16, 9cm × 9cm square= £4.49

With absorbent pad

Advazorb Border

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

Advazorb Border dressing (Advancis Medical) 10cm × 10cm= £2.20, 10cm × 20cm= £3.04, 10cm × 30cm= £4.45, 12.5cm × 12.5cm= £2.70, 15cm × 15cm= £3.30, 20cm × 20cm= £5.72, 7.5cm × 7.5cm= £1.25

Advazorb Border Lite

Soft silicone wound contact dressing with polyurethane foam film backing and adhesive border

Advazorb Border Lite dressing (Advancis Medical) 10cm × 10cm= £1.98, 10cm × 20cm= £2.73, 10cm × 30cm= £4.01, 12.5cm × 12.5cm= £2.43, 15cm × 15cm= £2.97, 20cm × 20cm= £5.14, 7.5cm × 7.5cm= £1.12

Advazorb Silfix

Soft silicone wound contact dressing with polyurethane foam film backing

Advazorb Silfix dressing (Advancis Medical) 10cm × 10cm= £1.94, 10cm × 20cm= £3.33, 12.5cm × 12.5cm= £2.71, 15cm × 15cm= £3.52, 20cm × 20cm= £5.21, 7.5cm × 7.5cm= £1.04

Advazorb Silfix Lite

Soft silicone wound contact dressing with polyurethane foam film backing

Advazorb Silfix Lite dressing (Advancis Medical) 10cm × 10cm= £1.75, 10cm × 20cm= £2.99, 12.5cm × 12.5cm= £2.44, 15cm × 15cm= £3.16, 20cm × 20cm= £4.69, 7.5cm × 7.5cm= £0.93

Allevyn Gentle Border

Silicone gel wound contact dressing, with polyurethane foam film backing

Allevyn Gentle Border (Smith & Nephew Healthcare Ltd) Heel dressing 23cm × 23.2cm= £10.27, dressing 10cm × 10cm= £2.33, 12.5cm × 12.5cm= £2.86, 17.5cm × 17.5cm= £5.63, 7.5cm × 7.5cm= £1.59

Allevyn Gentle Border Lite
Silicone gel wound contact dressing, with polyurethane foam film backing
Allevyn Gentle Border Lite dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £2.30, 15cm × 15cm= £4.06, 5.5cm × 12cm= £1.97, 5cm × 5cm= £0.96, 8cm × 15cm= £3.66

Allevyn Life
Soft silicone wound contact dressing, with central mesh screen, polyurethane foam film backing and adhesive border
Allevyn Life dressing (Smith & Nephew Healthcare Ltd) 10.3cm × 10.3cm= £1.80, 12.9cm × 12.9cm= £2.64, 15.4cm × 15.4cm= £3.23, 21cm × 21cm= £6.37

Cutimed Siltec
Soft silicone wound contact dressing, with polyurethane foam film backing
Cutimed Siltec (BSN medical Ltd) Sacrum dressing 17.5cm × 17.5cm= £4.75, 23cm × 23cm= £6.49, dressing 10cm × 10cm= £2.36, 10cm × 20cm= £3.90, 15cm × 15cm= £4.41, 20cm × 20cm= £6.69, 5cm × 6cm= £1.27

Cutimed Siltec B
Soft silicone wound contact dressing, with polyurethane foam film backing, with adhesive border, for lightly to moderately exuding wounds
Cutimed Siltec B dressing (BSN medical Ltd) 12.5cm × 12.5cm= £2.41, 15cm × 15cm= £3.20, 17.5cm × 17.5cm= £5.18, 22.5cm × 22.5cm= £6.32, 7.5cm × 7.5cm= £1.41

Cutimed Siltec L
Soft silicone wound contact dressing, with polyurethane foam film backing, for lightly to moderately exuding wounds
Cutimed Siltec L dressing (BSN medical Ltd) 10cm × 10cm= £1.64, 15cm × 15cm= £3.61, 5cm × 6cm= £1.12

Eclypse Adherent
Soft silicone wound contact layer with absorbent pad and film backing
Eclypse Adherent dressing (Advancis Medical) 10cm × 10cm= £3.13, 10cm × 20cm= £3.93, 15cm × 15cm= £5.22, 20cm × 30cm= £10.46, 17cm × 19cm sacral= £3.94, 22cm × 23cm sacral= £6.52

Mepilex
Absorbent soft silicone dressing with polyurethane foam film backing
Mepilex (Molnlycke Health Care Ltd) Heel dressing 13cm × 20cm= £5.70, 15cm × 22cm= £6.53, XT dressing 10cm × 11cm= £2.78, 11cm × 20cm= £4.59, 15cm × 16cm= £5.05, 20cm × 21cm= £7.62, dressing 5cm × 5cm= £1.26

Mepilex Border
Absorbent soft silicone dressing with polyurethane foam film backing and adhesive border
Mepilex Border dressing (Molnlycke Health Care Ltd) 10cm × 12.5cm= £2.76, 10cm × 20cm= £3.77, 10cm × 30cm= £5.66, 15cm × 17.5cm= £4.24, 17cm × 20cm= £6.16

Mepilex Border Lite
Thin absorbent soft silicone dressing with polyurethane foam film backing and adhesive border
Mepilex Border Lite dressing (Molnlycke Health Care Ltd) 15cm × 15cm= £3.99, 4cm × 5cm= £0.94, 5cm × 12.5cm= £2.04, 7.5cm × 7.5cm= £1.37

Mepilex Lite
Thin absorbent soft silicone dressing with polyurethane foam film backing
Mepilex Lite dressing (Molnlycke Health Care Ltd) 10cm × 10cm= £2.26, 15cm × 15cm= £4.38, 20cm × 50cm= £27.66, 6cm × 8.5cm= £1.89

Mepilex Transfer
Soft silicone exudate transfer dressing
Mepilex Transfer dressing (Molnlycke Health Care Ltd) 10cm × 12cm= £3.67, 15cm × 20cm= £11.12, 20cm × 50cm= £28.42, 7.5cm × 8.5cm= £2.33

Sorbion Sana
Non-adherent polyethylene wound contact dressing with absorbent core
Cutimed Sorbion Sana Gentle dressing (BSN medical Ltd) 12cm × 12cm= £2.65, 12cm × 22cm= £4.78, 22cm × 22cm= £8.51, 8.5cm × 8.5cm= £2.12

UrgotulDuo
Non-adherent soft polymer wound contact dressing with absorbent pad
UrgotulDuo dressing (Urgo Ltd) 10cm × 12cm= £4.03, 15cm × 20cm= £9.37, 5cm × 10cm= £2.61

Vliwasorb Adhesive
Absorbent polymer dressing with non-adherent wound contact layer and adhesive border
Vliwasorb Adhesive dressing (Lohmann & Rauscher) 12cm × 12cm square= £3.48, 15cm × 15cm square= £4.70, 15cm × 25cm rectangular= £6.90

Without absorbent pad

Adaptic Touch
Non-adherent soft silicone wound contact dressing
Adaptic Touch dressing (Systagenix Wound Management Ltd) 12.7cm × 15cm= £4.71, 20cm × 32cm= £12.66, 5cm × 7.6cm= £1.14, 7.6cm × 11cm= £2.28

Askina SilNet
Soft silicone-coated wound contact dressing
Askina SilNet dressing (B.Braun Medical Ltd) 10cm × 18cm= £5.31, 20cm × 30cm= £13.00, 5cm × 7.5cm= £1.21, 7.5cm × 10cm= £2.43

Mepitel
Soft silicone, semi-transparent wound contact dressing
Mepitel dressing (Molnlycke Health Care Ltd) 12cm × 15cm= £5.72, 5cm × 7cm= £1.43, 8cm × 10cm= £2.86

Mepitel One
Soft silicone, thin, transparent wound contact dressing
Mepitel One dressing (Molnlycke Health Care Ltd) 13cm × 15cm= £5.04, 24cm × 27.5cm= £14.43, 6cm × 7cm= £1.24, 9cm × 10cm= £2.44

Silflex
Soft silicone-coated polyester wound contact dressing
Silflex dressing (Advancis Medical) 12cm × 15cm= £4.79, 20cm × 30cm= £12.34, 35cm × 60cm= £41.39, 5cm × 7cm= £1.16, 8cm × 10cm= £2.38

Silon-TSR
Soft silicone polymer wound contact dressing
Silon-TSR dressing (Bio Med Sciences) 13cm × 13cm= £3.52, 13cm × 25cm= £5.47, 28cm × 30cm= £7.37

Sorbion Contact
Non-adherent soft polymer wound contact dressing
Cutimed Sorbion Contact dressing (BSN medical Ltd) 10cm × 10cm= £2.07, 10cm × 20cm= £4.14, 20cm × 20cm= £7.26, 20cm × 30cm= £10.37, 7.5cm × 7.5cm= £1.55

Tegaderm Contact
Non-adherent soft polymer wound contact dressing
Tegaderm Contact dressing (3M Health Care Ltd) 20cm × 25cm= £11.06, 7.5cm × 10cm= £2.32

Urgotul
Non-adherent soft polymer wound contact dressing
Urgotul dressing (Urgo Ltd) 10cm × 10cm= £3.13, 10cm × 40cm= £10.53, 15cm × 15cm= £6.66, 15cm × 20cm= £8.86, 20cm × 30cm= £14.25, 5cm × 5cm= £1.57

Hydrocolloid dressings

Hydrocolloid dressings are usually presented as a hydrocolloid layer on a vapour-permeable film or foam pad. Semi-permeable to water vapour and oxygen, these dressings form a gel in the presence of exudate to facilitate rehydration in lightly to moderately exuding wounds and promote autolytic debridement of dry, sloughy, or necrotic wounds; they are also suitable for promoting granulation. Hydrocolloid-fibrous dressings made from modified carmellose fibres resemble alginate dressings; hydrocolloid-fibrous dressings are more absorptive and suitable for moderately to heavily exuding wounds.

Hydrocolloid-fibrous dressings

Aquacel

Soft non-woven pad containing hydrocolloid-fibres

Aquacel Ribbon dressing (ConvaTec Ltd) 1cm × 45cm= £1.97, 2cm × 45cm= £2.61

Aquacel Foam

Soft non-woven pad containing hydrocolloid-fibres with foam layer; with or without adhesive border

Aquacel Foam dressing adhesive (ConvaTec Ltd) 10cm × 10cm= £2.28, 12.5cm × 12.5cm= £2.83, 17.5cm × 17.5cm= £5.65, 19.8cm × 14cm heel= £5.78, 20cm × 16.9cm sacral= £5.19, 21cm × 21cm= £8.27, 25cm × 30cm= £10.71, 8cm × 8cm= £1.47, **non-adhesive** 10cm × 10cm= £2.70, 15cm × 15cm= £4.53, 15cm × 20cm= £6.20, 20cm × 20cm= £7.39

UrgoClean Pad

Pad, hydrocolloid fibres coated with soft-adherent lipo-colloidal wound contact layer

UrgoClean Pad dressing (Urgo Ltd) 10cm × 10cm square= £2.24, 20cm × 15cm rectangular= £4.21, 6cm × 6cm square= £1.01

UrgoClean Rope

Rope, non-woven rope containing hydrocolloid fibres

UrgoClean rope dressing (Urgo Ltd) 2.5cm × 40cm= £2.52, 5cm × 40cm= £3.33

Polyurethane matrix dressing

Cutinova Hydro

Polyurethane matrix with absorbent particles and waterproof polyurethane film

Cutinova Hydro dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £2.71, 15cm × 20cm rectangular= £5.74, 5cm × 6cm rectangular= £1.35

With adhesive border

Biatain Super

Semi-permeable hydrocolloid dressing; without adhesive border

Biatain Super dressing (adhesive) (Coloplast Ltd) 10cm × 10cm square= £2.29, 12.5cm × 12.5cm square= £3.79, 12cm × 20cm rectangular= £3.80, 15cm × 15cm square= £4.56, 20cm × 20cm square= £7.12

Granuflex Bordered

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

Granuflex Bordered dressing (ConvaTec Ltd) 10cm × 10cm square= £3.55, 10cm × 13cm triangular= £4.19, 15cm × 15cm square= £6.78, 6cm × 6cm square= £1.87

Hydrocoll Border

Hydrocolloid dressing with adhesive border and absorbent wound contact pad

Hydrocoll Border (bevelled edge) dressing (Paul Hartmann Ltd) 10cm × 10cm square= £2.55, 12cm × 18cm sacral= £3.82, 15cm × 15cm square= £4.80, 5cm × 5cm square= £1.07, 7.5cm × 7.5cm square= £1.75, 8cm × 12cm concave= £2.25

Tegaderm Hydrocolloid

Hydrocolloid dressing with adhesive border; normal or thin

Tegaderm Hydrocolloid (3M Health Care Ltd) Thin dressing 10cm × 12cm oval= £1.60, 13cm × 15cm oval= £2.98, dressing 10cm × 12cm oval= £2.40, 13cm × 15cm oval= £4.48, 17.1cm × 16.1cm sacral= £5.00

Without adhesive border

ActivHeal Hydrocolloid

Semi-permeable polyurethane film backing, hydrocolloid wound contact layer, with or without polyurethane foam later

ActivHeal Hydrocolloid (Advanced Medical Solutions Ltd) dressing 10cm × 10cm square= £1.60, 15cm × 15cm square= £3.48, 15cm × 18cm sacral= £4.03, 5cm × 7.5cm rectangular= £0.79, foam backed dressing 10cm × 10cm square= £1.56, 15cm × 15cm square= £2.95, 15cm × 18cm sacral= £3.40, 5cm × 7.5cm rectangular= £0.99

Biatain Super

Semi-permeable, hydrocolloid film dressing without adhesive border

Biatain Super dressing (non-adhesive) (Coloplast Ltd) 10cm × 10cm square= £2.29, 12.5cm × 12.5cm square= £3.79, 12cm × 20cm rectangular= £3.80, 15cm × 15cm square= £4.56, 20cm × 20cm square= £7.12

Comfeel Plus Contour

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus Contour dressing (Coloplast Ltd) 6cm × 8cm= £2.35, 9cm × 11cm= £4.08

Comfeel Plus Pressure Relieving

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus Pressure Relief dressing (Coloplast Ltd) 10cm diameter circular= £4.92, 15cm diameter circular= £7.41, 7cm diameter circular= £3.67

Comfeel Plus Transparent

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus Transparent dressing (Coloplast Ltd) 10cm × 10cm square= £1.35, 15cm × 15cm square= £3.53, 15cm × 20cm rectangular= £3.59, 20cm × 20cm square= £3.61, 5cm × 15cm rectangular= £1.68, 5cm × 25cm rectangular= £2.73, 5cm × 7cm rectangular= £0.71, 9cm × 14cm rectangular= £2.58, 9cm × 25cm rectangular= £3.66

Comfeel Plus Ulcer

Hydrocolloid dressings containing carmellose sodium and calcium alginate

Comfeel Plus dressing (Coloplast Ltd) 10cm × 10cm square= £2.60, 20cm × 20cm square= £8.01, 4cm × 6cm rectangular= £1.02

DuoDERM Extra Thin

Semi-permeable hydrocolloid dressing

DuoDERM Extra Thin dressing (ConvaTec Ltd) 10cm × 10cm square= £1.41, 15cm × 15cm square= £3.03, 5cm × 10cm rectangular= £0.81, 7.5cm × 7.5cm square= £0.85, 9cm × 15cm rectangular= £1.88, 9cm × 25cm rectangular= £3.00, 9cm × 35cm rectangular= £4.20

DuoDERM Signal

Semi-permeable hydrocolloid dressing with ‘Time to change’ indicator

DuoDERM Signal dressing (ConvaTec Ltd) 10cm × 10cm square= £2.26, 14cm × 14cm square= £3.96, 20cm × 20cm square= £7.86

Flexigran

Semi-permeable hydrocolloid dressing without adhesive border; normal or thin

Flexigran (A1 Pharmaceuticals) Thin dressing 10cm × 10cm square= £1.08, dressing 10cm × 10cm square= £2.19

Granuflex

Hydrocolloid wound contact layer bonded to plastic foam layer, with outer semi-permeable polyurethane film

Granuflex (modified) dressing (ConvaTec Ltd) 10cm × 10cm square= £2.98, 15cm × 15cm square= £5.65, 20cm × 20cm square= £8.51

Hydrocoll Basic

Hydrocolloid dressing with absorbent wound contact pad

Hydrocoll Basic dressing (Paul Hartmann Ltd) 10cm × 10cm square= £2.59

Hydrocoll Thin Film

Thin hydrocolloid dressing with absorbent wound contact pad

Hydrocoll Thin Film dressing (Paul Hartmann Ltd) 10cm × 10cm square= £1.22, 15cm × 15cm square= £2.75, 7.5cm × 7.5cm square= £0.74

Nu-Derm

Semi-permeable hydrocolloid dressing (normal and thin)

Nu-Derm dressing (Systagenix Wound Management Ltd) 10cm × 10cm square= £1.57, 15cm × 15cm square= £3.21, 15cm × 18cm sacral= £4.49, 20cm × 20cm square= £6.41, 5cm × 5cm square= £0.86, 8cm × 12cm heel/elbow= £3.21, thin 10cm × 10cm square= £1.07

Tegaderm Hydrocolloid

Hydrocolloid dressing without adhesive border; normal and thin

Tegaderm Hydrocolloid (3M Health Care Ltd) Thin dressing 10cm × 10cm square= £1.60, dressing 10cm × 10cm square= £2.44

Foam dressings

Dressings containing hydrophilic polyurethane foam (adhesive or non-adhesive), with or without plastic film-backing, are suitable for all types of exuding wounds, but not for dry wounds; some foam dressings have a moisture-sensitive film backing with variable permeability dependant on the level of exudate. Foam dressings vary in their ability to absorb exudate; some are suitable only for lightly to moderately exuding wounds, others have greater fluid-handing capacity and are suitable for heavily exuding wounds. Saturated foam dressings can cause maceration of healthy skin if left in contact with the wound. Foam dressings can be used in combination with other primary wound contact dressings. If used under compression bandaging or compression garments, the fluid-handling capacity of the foam dressing may be reduced. Foam dressings can also be used to provide a protective cushion for fragile skin. A foam dressing containing ibuprofen is available and may be useful for treating painful exuding wounds.

Polyurethane Foam Dressing

Cutimed Cavity

Cutimed Cavity dressing (BSN medical Ltd) 10cm × 10cm= £3.32, 15cm × 15cm= £4.99, 5cm × 6cm= £2.00

Kendall

Kendall Foam dressing (H & R Healthcare Ltd) 10cm × 10cm square= £1.09, 10cm × 20cm rectangular= £2.10, 12.5cm × 12.5cm square= £1.85, 15cm × 15cm square= £2.66, 20cm × 20cm square= £3.08, 5cm × 5cm square= £0.73, 7.5cm × 7.5cm square= £1.24, 8.5cm × 7.5cm rectangular (fenestrated)= £0.93

Polyurethane Foam Film Dressing with Adhesive Border

ActivHeal Foam Adhesive

ActivHeal Foam Adhesive dressing (Advanced Medical Solutions Ltd) 10cm × 10cm square= £1.65, 12.5cm × 12.5cm square= £1.70, 15cm × 15cm square= £2.18, 20cm × 20cm square= £4.56, 7.5cm × 7.5cm square= £1.19

Allevyn Adhesive

Allevyn Adhesive dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £2.33, 12.5cm × 12.5cm square= £2.85, 12.5cm × 22.5cm rectangular= £4.43, 17.5cm × 17.5cm square= £5.61, 17cm × 17cm anatomically shaped sacral= £4.22, 22.5cm × 22.5cm square= £8.18, 22cm × 22cm anatomically shaped sacral= £6.08, 7.5cm × 7.5cm square= £1.59

Biatain Adhesive

Biatain Adhesive dressing (Coloplast Ltd) 10cm × 10cm square= £1.87, 12.5cm × 12.5cm square= £2.72, 17cm diameter contour= £5.28, 18cm × 18cm square= £5.49, 18cm × 28cm rectangular= £8.13, 19cm × 20cm heel= £5.49, 23cm × 23cm sacral= £4.70

Biatain Silicone

Biatain Silicone dressing (Coloplast Ltd) 10cm × 10cm= £2.26, 12.5cm × 12.5cm= £2.76, 15cm × 15cm= £4.10, 17.5cm × 17.5cm= £5.44, 7.5cm × 7.5cm= £1.53

Kendall Island

Kendall Foam Island dressing (H & R Healthcare Ltd) 10cm × 10cm square= £1.56, 15cm × 15cm square= £2.93, 20cm × 20cm square= £5.53

PolyMem

PolyMem dressing (H & R Healthcare Ltd) (adhesive) 5cm × 5cm square= £0.53, 16.5cm × 20.9cm oval= £6.87, 18.4cm × 20cm sacral= £4.62, 5cm × 7.6cm oval= £1.18, 8.8cm × 12.7cm oval= £2.09

Tegaderm Foam Adhesive

Tegaderm Foam dressing (adhesive) (3M Health Care Ltd) 10cm × 11cm oval= £2.42, 13.9cm × 13.9cm circular (heel)= £4.35, 14.3cm × 14.3cm square= £3.65, 14.3cm × 15.6cm oval= £4.38, 19cm × 22.2cm oval= £7.18, 6.9cm × 6.9cm soft cloth border= £1.76, 6.9cm × 7.6cm oval= £1.51

Polyurethane Foam Film Dressing without Adhesive Border

ActivHeal Foam Non-Adhesive

ActivHeal Non-Adhesive Foam polyurethane dressing (Advanced Medical Solutions Ltd) 10cm × 10cm square= £1.14, 10cm × 20cm rectangular= £2.37, 20cm × 20cm square= £3.97, 5cm × 5cm square= £0.76

Advazorb

Advazorb (Advancis Medical) Heel dressing 17cm × 21cm= £4.97, dressing 10cm × 10cm square= £1.13, 10cm × 20cm rectangular= £3.51, 12.5cm × 12.5cm square= £1.66, 15cm × 15cm square= £2.20, 20cm × 20cm square= £3.93, 5cm × 5cm square= £0.68, 7.5cm × 7.5cm square= £0.82

Advazorb Lite

Advazorb Lite dressing (Advancis Medical) 10cm × 10cm square= £1.02, 10cm × 20cm rectangular= £3.16, 12.5cm × 12.5cm square= £1.50, 15cm × 15cm square= £1.98, 20cm × 20cm square= £3.54, 7.5cm × 7.5cm square= £0.73

Allevyn Non-Adhesive

Allevyn dressing (non-adhesive) (Smith & Nephew Healthcare Ltd) 10.5cm × 13.5cm heel (cup shaped)= £5.44, 10cm × 10cm square= £2.66, 10cm × 20cm rectangular= £4.27, 20cm × 20cm square= £7.13, 5cm × 5cm square= £1.34

Askina Foam

Askina (B.Braun Medical Ltd) Foam Cavity dressing 2.4cm × 40cm= £2.61, Foam dressing 10cm × 10cm square= £2.33, 10cm × 20cm rectangular= £3.68, 20cm × 20cm square= £6.15, Heel dressing 12cm × 20cm= £4.98

Biatain -Ibu Non-Adhesive

Biatain-Ibu Non-Adhesive dressing (Coloplast Ltd) 10cm × 12cm rectangular= £3.52, 10cm × 22.5cm rectangular= £5.54, 15cm × 15cm square= £5.54, 20cm × 20cm square= £9.43, 5cm × 7cm rectangular= £1.83

Biatain -Ibu Soft-Hold

Biatain-Ibu Soft-Hold dressing (Coloplast Ltd) 10cm × 12cm rectangular= £3.52, 10cm × 22.5cm rectangular= £5.54, 15cm × 15cm square= £5.54

Biatain Non-Adhesive

Biatain Non-Adhesive dressing (Coloplast Ltd) 10cm × 10cm square= £2.53, 10cm × 20cm rectangular= £4.18, 15cm × 15cm square= £4.66, 20cm × 20cm square= £6.93, 5cm × 7cm rectangular= £1.39

Biatain Soft-Hold

Biatain Soft-Hold dressing (Coloplast Ltd) 10cm × 10cm square= £2.75, 10cm × 20cm rectangular= £4.18, 15cm × 15cm square= £4.57, 5cm × 7cm rectangular= £1.39

Kendall Plus

Kendall Foam Plus dressing (H & R Healthcare Ltd) 10cm × 10cm square= £1.50, 10cm × 20cm rectangular= £2.75, 15cm × 15cm square= £3.46, 20cm × 20cm square= £4.13, 5cm × 5cm square= £0.83, 7.5cm × 7.5cm square= £1.45, 8.5cm × 7.5cm rectangular (fenestrated)= £1.27

Kerraheel

Kerraheel dressing (Crawford Healthcare Ltd) 12cm × 20cm heel= £4.78

Lyofoam Max

Lyofoam Max dressing (Molnlycke Health Care Ltd) 10cm × 10cm square= £1.19, 10cm × 20cm rectangular= £2.10, 15cm × 15cm square= £2.24, 15cm × 20cm rectangular= £2.83, 20cm × 20cm square= £4.16, 7.5cm × 8.5cm rectangular= £1.14

PermaFoam

PermaFoam Classic dressing (non-adhesive) (Paul Hartmann Ltd) 8cm × 8cm square (fenestrated) = £1.33

PolyMem

PolyMem dressing (H & R Healthcare Ltd) 7cm × 7cm tube= £1.75, 9cm × 9cm tube= £2.22, finger/toe size 1= £2.55, 2= £2.55, 3= £2.55

PolyMem

PolyMem dressing (non-adhesive) (H & R Healthcare Ltd) 10cm × 10cm square= £2.52, 10cm × 61cm roll= £13.36, 13cm × 13cm square= £4.20, 17cm × 19cm rectangular= £6.20, 20cm × 60cm roll= £31.52, 8cm × 8cm square= £1.62

PolyMem Max

PolyMem Max dressing (H & R Healthcare Ltd) 11cm × 11cm square= £3.02, 20cm × 20cm square= £11.92

PolyMem WIC

PolyMem WIC (H & R Healthcare Ltd) dressing 8cm × 8cm= £3.77

Tegaderm Foam

Tegaderm Foam dressing (3M Health Care Ltd) 10cm × 10cm square= £2.26, 10cm × 20cm rectangular= £3.83, 10cm × 60cm rectangular= £12.77, 20cm × 20cm square= £6.11, 8.8cm × 8.8cm square (fenestrated)= £2.30

Transorbent

Transorbent dressing (adhesive) (B.Braun Medical Ltd) 10cm × 10cm square= £2.06, 15cm × 15cm square= £3.79, 20cm × 20cm square= £6.06, 5cm × 7cm rectangular= £1.09

UrgoCell TLC

UrgoTul Absorb dressing (Urgo Ltd) 10cm × 10cm= £2.44, 15cm × 20cm= £4.31, 6cm × 6cm= £1.24, 12cm × 19cm heel= £4.92

Alginate dressings

Non-woven or fibrous, non-occlusive, alginate dressings, made from calcium alginate, or calcium sodium alginate, derived from brown seaweed, form a soft gel in contact with wound exudate. Alginate dressings are highly absorbent and suitable for use on exuding wounds, and for the promotion of autolytic debridement of debris in very moist wounds. Alginate dressings also act as a haemostatic, but caution is needed because blood clots can cause the dressing to adhere to the wound surface. Alginate dressings should not be used if bleeding is heavy and extreme caution is needed if used for tumours with friable tissue. Alginate sheets are suitable for use as a wound contact dressing for moderately to heavily exuding wounds and can be layered into deep wounds; alginate rope can be used in sinus and cavity wounds to improve absorption of exudate and prevent maceration. If the dressing does not have an adhesive border or integral adhesive plastic film backing, a secondary dressing will be required.

ActivHeal Alginate

Calcium sodium alginate dressing

ActivHeal Alginate (Advanced Medical Solutions Ltd) Rope dressing 2.5cm × 30cm= £2.16, dressing 10cm × 10cm= £1.17, 10cm × 20cm= £2.87, 5cm × 5cm= £0.60

ActivHeal Aquafiber

Non-woven, calcium sodium alginate dressing

ActivHeal Aquafiber (Advanced Medical Solutions Ltd) Rope dressing 2cm × 42cm= £1.84, dressing 10cm × 10cm= £1.50, 15cm × 15cm= £2.82, 5cm × 5cm= £0.63

Algisite M

Calcium alginate fibre, non-woven dressing

Algisite M (Smith & Nephew Healthcare Ltd) Rope dressing 2cm × 30cm= £3.69, dressing 10cm × 10cm= £2.04, 15cm × 20cm= £5.47, 5cm × 5cm= £0.99

Biatain Alginate

Alginate and carboxymethylcellulose dressing, highly absorbent, gelling dressing

Biatain Alginate dressing (Coloplast Ltd) 10cm × 10cm= £2.46, 15cm × 15cm= £4.66, 44cm= £2.90, 5cm × 5cm= £1.03

Cutimed Alginate

Calcium sodium alginate dressing

Cutimed Alginate dressing (BSN medical Ltd) 10cm × 10cm= £1.67, 10cm × 20cm= £3.13, 5cm × 5cm= £0.79

Kaltostat

Calcium alginate fibre, non-woven

Kaltostat dressing (ConvaTec Ltd) 10cm × 20cm= £4.35, 15cm × 25cm= £7.47, 2g= £4.07, 5cm × 5cm= £1.02, 7.5cm × 12cm= £2.21

Kendall

Calcium alginate dressing

Kendall Calcium Alginate (H & R Healthcare Ltd) Rope dressing 30cm= £2.93, 61cm= £5.14, 91cm= £5.53, dressing 10cm × 10cm= £1.54, 10cm × 14cm= £2.48, 10cm × 20cm= £3.02, 15cm × 25cm= £5.32, 30cm × 61cm= £27.90, 5cm × 5cm= £0.73

Kendall Plus

Calcium alginate dressing

Kendall Foam Plus (H & R Healthcare Ltd) dressing 10cm × 10cm square= £1.50

Melgisorb

Calcium sodium alginate fibre, highly absorbent, gelling dressing, non-woven

Melgisorb (Molnlycke Health Care Ltd) Cavity dressing 2.2cm × 32cm= £3.55, dressing 10cm × 10cm= £1.88, 10cm × 20cm= £3.52, 5cm × 5cm= £0.90

Sorbalgon

Calcium alginate dressing

Sorbalgon (Paul Hartmann Ltd) T dressing 2g= £3.68, dressing 10cm × 10cm= £1.81, 5cm × 5cm= £0.86

Sorbsan Flat

Calcium alginate fibre, highly absorbent, flat non-woven pads

Sorbsan Flat dressing (Aspen Medical Europe Ltd) 10cm × 10cm= £1.72, 10cm × 20cm= £3.22, 5cm × 5cm= £0.82

Sorbsan Plus

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan Plus dressing (Aspen Medical Europe Ltd) 10cm × 15cm= £3.12, 10cm × 20cm= £3.98, 15cm × 20cm= £5.53, 7.5cm × 10cm= £1.77

Sorbsan Ribbon

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan Ribbon dressing (Aspen Medical Europe Ltd) 40cm= £2.06

Sorbsan Surgical Packing

Alginate dressing bonded to a secondary absorbent viscose pad

Sorbsan Packing dressing (Aspen Medical Europe Ltd) 2g= £3.50

Suprasorb A

Calcium alginate dressing

Suprasorb A (Lohmann & Rauscher) alginate dressing 10cm × 10cm= £1.29, 5cm × 5cm= £0.66, cavity dressing 2g= £2.40

Tegaderm Alginate

Calcium alginate dressing

Tegaderm Alginate dressing (3M Health Care Ltd) 10cm × 10cm= £1.78, 2cm × 30.4cm= £2.96, 5cm × 5cm= £0.84

Urgosorb

Alginate and carboxymethylcellulose dressing without adhesive border

Urgosorb (Urgo Ltd) Pad dressing 10cm × 10cm= £2.25, 10cm × 20cm= £4.12, 5cm × 5cm= £0.94, Rope dressing 30cm= £2.94

Capillary-acting dressings

Vacutex

Low-adherent dressing consisting of two external polyester wound contact layers with central wicking polyester/cotton mix absorbent layer

Vacutex dressing (Haddenham Healthcare Ltd) 10cm × 10cm= £1.70, 10cm × 15cm= £2.29, 10cm × 20cm= £2.75, 5cm × 5cm= £0.96

Odour absorbent dressings

Dressings containing activated charcoal are used to absorb odour from wounds. The underlying cause of wound odour should be identified. Wound odour is most effectively reduced by debridement of slough, reduction in bacterial levels, and frequent dressing changes. Fungating wounds and chronic infected wounds produce high volumes of exudate which can reduce the effectiveness of odour absorbent dressings. Many odour absorbent dressings are intended for use in combination with other dressings; odour absorbent dressings with a suitable wound contact layer can be used as a primary dressing.

Askina Carbosorb

Activated charcoal and non-woven viscose rayon dressing

Askina Carbosorb dressing (B.Braun Medical Ltd) 10cm × 10cm= £3.08, 10cm × 20cm= £5.95

CarboFLEX
Dressing in 5 layers: wound-facing absorbent layer containing alginate and hydrocolloid; water-resistant second layer; third layer containing activated charcoal; non-woven absorbent fourth layer; water-resistant backing layer
CarboFlex dressing (ConvaTec Ltd) 10cm × 10cm= £3.42, 15cm × 20cm= £7.78, 8cm × 15cm oval= £4.10

Carbopad VC
Activated charcoal non-absorbent dressing
Carbopad VC dressing (Synergy Health (UK) Ltd) 10cm × 10cm= £1.62, 10cm × 20cm= £2.19

CliniSorb Odour Control Dressings
Activated charcoal cloth enclosed in viscose rayon with outer polyamide coating
CliniSorb dressing (CliniMed Ltd) 10cm × 10cm= £2.01, 10cm × 20cm= £2.68, 15cm × 25cm= £4.31

Antimicrobial dressings

Spreading infection at the wound site requires treatment with systemic antibacterials. For local wound infection, a topical antimicrobial dressing can be used to reduce the level of bacteria at the wound surface but will not eliminate a spreading infection. Some dressings are designed to release the antimicrobial into the wound, others act upon the bacteria after absorption from the wound. The amount of exudate present and the level of infection should be taken into account when selecting an antimicrobial dressing. Medical grade honey has antimicrobial and anti-inflammatory properties. Dressings impregnated with iodine can be used to treat clinically infected wounds. Dressings containing silver should be used only when clinical signs or symptoms of infection are present. Dressings containing other antimicrobials such as polihexanide (polyhexamethylene biguanide) or dialkylcarbamoyl chloride are available for use on infected wounds. Although hypersensitivity is unlikely with chlorhexidine impregnated tulle dressing, the antibacterial efficacy of these dressings has not been established.

Honey dressings

Medical grade honey has antimicrobial and anti-inflammatory properties and can be used for acute or chronic wounds. Medical grade honey has osmotic properties, producing an environment that promotes autolytic debridement; it can help control wound malodour. Honey dressings should not be used on patients with extreme sensitivity to honey, bee stings or bee products. Patients with diabetes should be monitored for changes in blood-glucose concentrations during treatment with topical honey or honey-impregnated dressings.
For *Actilite*®, *Activon Tulle*® and *Revamil*®, where no size is stated by the prescriber the 5 cm size is to be supplied.
Medihoney® *Antimicrobial Wound Gel* is not recommended for use in deep wounds or body cavities where removal of waxes may be difficult.

Honey-based topical application

Activon Honey
Medical grade manuka honey
Activon (Advancis Medical) Medical Grade Manuka Honey dressing= £2.80

L-Mesitran SOFT ointment dressing
Honey (medical grade) 40%
L-Mesitran (H & R Healthcare Ltd) SOFT ointment dressing= £3.62

MANUKApli Honey
Medical grade manuka honey
MANUKApli (Manuka Medical Ltd) dressing= £5.90

Medihoney Antibacterial Medical Honey
Medical grade, Leptospermum sp.
Medihoney (Integra NeuroSciences Ltd) Antibacterial Medical Honey dressing= £4.03

Medihoney Antibacterial Wound Gel
Medical grade, Leptospermum sp. 80% in natural waxes and oils
Medihoney (Integra NeuroSciences Ltd) Antibacterial Wound Gel dressing= £4.09

Melladerm Plus Honey
Medical grade; Bulgarian (mountain flower) 45% in basis containing polyethylene glycol
Melladerm Plus (SanoMed Manufacturing BV) dressing= £8.50

Revamil Balm
Medical grade honey-based ointment
Revamil Balm (Oswell Penda Pharmaceutical Ltd) dressing= £9.99

Revamil Wound Gel
Medical grade honey
Revamil Wound Gel (Oswell Penda Pharmaceutical Ltd) dressing= £3.48

Sheet dressing

Actilite
Knitted viscose impregnated with medical grade manuka honey and manuka oil
Actilite gauze dressing (Advancis Medical) 10cm × 10cm= £1.25, 10cm × 20cm= £2.41, 5cm × 5cm= £0.72

Activon Tulle
Knitted viscose impregnated with medical grade manuka honey
Activon Tulle gauze dressing (Advancis Medical) 10cm × 10cm= £3.76, 5cm × 5cm= £2.28

Algivon
Absorbent, non-adherent calcium alginate dressing impregnated with medical grade manuka honey
Algivon dressing (Advancis Medical) 10cm × 10cm= £4.30, 5cm × 5cm= £2.51

Algivon Plus
Reinforced calcium alginate dressing impregnated with medical grade manuka honey
Algivon Plus Ribbon dressing (Advancis Medical) 2.5cm × 20cm= £4.25, dressing 10cm × 10cm= £4.25, 5cm × 5cm= £2.48

L-Mesitran Border
Hydrogel, semi-permeable dressing impregnated with medical grade honey, with adhesive border
L-Mesitran Border sheet (H & R Healthcare Ltd) 10cm × 10cm square= £2.76

L-Mesitran Hydro
Hydrogel, semi-permeable dressing impregnated with medical grade honey, without adhesive border
L-Mesitran Hydro sheet (H & R Healthcare Ltd) 10cm × 10cm square= £2.65

L-Mesitran Net
Hydrogel, non-adherent wound contact layer, without adhesive border
L-Mesitran Net sheet (H & R Healthcare Ltd) 10cm × 10cm square= £2.55

Medihoney Antibacterial Honey Apinate
Non-adherent calcium alginate dressing, impregnated with medical grade honey
Medihoney Antibacterial Honey Apinate (Integra NeuroSciences Ltd) dressing 10cm × 10cm square= £3.46, 5cm × 5cm square= £2.04, rope dressing 1.9cm × 30cm= £4.28

Medihoney Antibacterial Honey Tulle
Woven fabric impregnated with medical grade manuka honey
Medihoney Tulle dressing (Integra NeuroSciences Ltd) 10cm x10cm= £3.03

Medihoney Gel sheet
Sodium alginate dressing impregnated with medical grade honey
Medihoney Gel Sheet dressing (Integra NeuroSciences Ltd) 10cm × 10cm= £4.28, 5cm × 5cm= £1.78

Melladerm Plus Tulle

Knitted viscose impregnated with medical grade honey (Bulgarian, mountain flower) 45% in a basis containing polyethylene glycol

Melladerm Plus Tulle dressing (SanoMed Manufacturing BV) 10cm × 10cm= £2.10

Revamil

Polyacetate dressing impregnated with medical grade honey

Revamil dressing (Oswell Penda Pharmaceutical Ltd) 10cm × 10cm= £2.90, 10cm × 20cm= £5.30, 5cm × 5cm= £1.75, 8cm × 8cm= £3.33

Iodine dressings

Cadexomer–iodine, like povidone–iodine, releases free iodine when exposed to wound exudate. The free iodine acts as an antiseptic on the wound surface, the cadexomer absorbs wound exudate and encourages de-sloughing. Two-component hydrogel dressings containing glucose oxidase and iodide ions generate a low level of free iodine in the presence of moisture and oxygen. Povidone–iodine fabric dressing is a knitted viscose dressing with povidone–iodine incorporated in a hydrophilic polyethylene glycol basis; this facilitates diffusion of the iodine into the wound and permits removal of the dressing by irrigation. The iodine has a wide spectrum of antimicrobial activity but it is rapidly deactivated by wound exudate. Systemic absorption of iodine may occur, particularly from large wounds or with prolonged use.

Iodoflex® and *Iodosorb*® are used for the treatment of chronic exuding wounds; max. single application 50 g, max. weekly application 150 g; max. duration up to 3 months in any single course of treatment. They are contra-indicated in patients receiving lithium, in thyroid disorders, in pregnancy and breast feeding, and in children; they should be used with caution in patients with severe renal impairment or history of thyroid disorder.

Iodozyme® is an antimicrobial dressing used for lightly to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

Oxyzyme® is used for non-infected, dry to moderately exuding wounds. It is contra-indicated in thyroid disorders and in patients receiving lithium; it should be used with caution in children and in women who are pregnant or breast-feeding.

Povidone-iodine Fabric Dressing is used as a wound contact layer for abrasions and superficial burns. It is contra-indicated in patients with severe renal impairment and in women who are pregnant or breast-feeding; it should be used with caution in patients with thyroid disease and in children under 6 months.

Iodoflex Paste

Iodine 0.9% as cadexomer–iodine in a paste basis with gauze backing

Iodoflex paste (Smith & Nephew Healthcare Ltd) dressing= £8.66

Iodosorb Ointment

Iodine 0.9% as cadexomer–iodine in an ointment basis

Iodosorb ointment (Smith & Nephew Healthcare Ltd) dressing= £9.57

Iodosorb Powder

Iodine 0.9% as cadexomer–iodine microbeads, 3-g sachet

Iodosorb powder (Smith & Nephew Healthcare Ltd) dressing sachets= £2.05

Povidone-iodine fabric dressing

Inadine

(Drug Tariff specification 43). Knitted viscose primary dressing impregnated with povidone–iodine ointment 10%

Inadine dressing (Systagenix Wound Management Ltd) 5cm × 5cm= £0.34, 9.5cm × 9.5cm= £0.50

Silver dressings

Antimicrobial dressings containing silver should be used only when infection is suspected as a result of clinical signs or symptoms (see also notes above). Silver ions exert an antimicrobial effect in the presence of wound exudate; the volume of wound exudate as well as the presence of infection should be considered when selecting a silver-containing dressing. Silver-impregnated dressings should not be used routinely for the management of uncomplicated ulcers. It is recommended that these dressings should not be used on acute wounds as there is some evidence to suggest they delay wound healing. Dressings impregnated with silver sulfadiazine have broad antimicrobial activity; if silver sulfadiazine is applied to large areas, or used for prolonged periods, there is a risk of blood disorders and skin discoloration. The use of silver sulfadiazine-impregnated dressings is contra-indicated in neonates, in pregnancy, and in patients with significant renal or hepatic impairment, sensitivity to sulfonamides, or G6PD deficiency. Large amounts of silver sulfadiazine applied topically may interact with other drugs—see Appendix 1 (sulfonamides).

Alginate dressings

Algisite Ag

Calcium alginate dressing, with silver

Algisite Ag dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm= £4.43, 10cm × 20cm= £8.15, 2g= £6.12, 5cm × 5cm= £1.77

Askina Calgitrol Ag

Calcium alginate and silver alginate dressing with polyurethane foam backing

Askina Calgitrol Ag dressing (B.Braun Medical Ltd) 10cm × 10cm square= £3.41, 15cm × 15cm square= £6.61, 20cm × 20cm square= £15.41

Askina Calgitrol Thin

Calcium alginate and silver alginate matrix, for use with absorptive secondary dressings

Askina Calgitrol Thin dressing (B.Braun Medical Ltd) 10cm × 10cm square= £4.35, 20cm × 20cm square= £17.24, 5cm × 5cm square= £2.09

Melgisorb Ag

Alginate and carboxymethylcellulose dressing, with ionic silver

Melgisorb Ag (Molnlycke Health Care Ltd) Cavity dressing 3cm × 44cm= £4.78, dressing 10cm × 10cm= £3.83, 15cm × 15cm= £8.12, 5cm × 5cm= £1.92

Silvercel

Alginate and carboxymethylcellulose dressing impregnated with silver

Silvercel dressing (Systagenix Wound Management Ltd) 10cm × 20cm rectangular= £7.92, 11cm × 11cm square= £4.27, 2.5cm × 30.5cm rectangular= £4.59, 5cm × 5cm square= £1.73

Silvercel Non-adherent

Alginate and carboxymethylcellulose dressing with film wound contact layer, impregnated with silver

Silvercel Non-Adherent (Systagenix Wound Management Ltd) cavity dressing 2.5cm × 30.5cm= £4.03, dressing 10cm × 20cm rectangular= £7.42, 11cm × 11cm square= £3.98, 5cm × 5cm square= £1.66

Sorbsan Silver Flat

Calcium alginate fibre, highly absorbent, flat non-woven pads, with silver

Sorbsan Silver Flat dressing (Aspen Medical Europe Ltd) 10cm × 10cm= £4.00, 10cm × 20cm= £7.31, 5cm × 5cm= £1.58

Sorbsan Silver Plus

Calcium alginate dressing with absorbent backing, with silver

Sorbsan Silver Plus dressing (Aspen Medical Europe Ltd) 10cm × 15cm= £5.60, 10cm × 20cm= £6.82, 15cm × 20cm= £9.15, 7.5cm × 10cm= £3.37

Sorbsan Silver Ribbon

With silver

Sorbsan Silver Ribbon dressing (Aspen Medical Europe Ltd) 1g= £4.18

Sorbsan Silver Surgical Packing

With silver

Sorbsan Silver Packing dressing (Aspen Medical Europe Ltd) 2g= £5.80

Suprasorb A + Ag
Calcium alginate dressing, with silver
Suprasorb A + Ag (Lohmann & Rauscher) dressing 10cm × 10cm= £4.32, 10cm × 20cm= £7.97, 5cm × 5cm= £1.72, rope dressing 2g= £6.38

Tegaderm Alginate Ag
Calcium alginate and carboxymethylcellulose dressing, with silver
Tegaderm Alginate Ag dressing (3M Health Care Ltd) 10cm × 10cm= £3.30, 3cm × 30cm= £3.77, 5cm × 5cm= £1.42

Urgosorb Silver
Alginate and carboxymethylcellulose dressing, impregnated with silver
Urgosorb Silver (Urgo Ltd) Rope dressing 2.5cm × 30cm= £3.91, dressing 10cm × 10cm= £3.89, 10cm × 20cm= £7.33, 5cm × 5cm= £1.63

Foam dressings

Acticoat Moisture Control
Three layer polyurethane dressing consisting of a silver coated layer, a foam layer, and a waterproof layer
Acticoat Moisture Control dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £17.88, 10cm × 20cm rectangular= £34.84, 5cm × 5cm square= £7.65

Allevyn Ag
Silver sulfadiazine impregnated polyurethane foam film dressing with or without adhesive border
Allevyn Ag (Smith & Nephew Healthcare Ltd) **Adhesive dressing** 10cm × 10cm square= £5.86, 12.5cm × 12.5cm square= £7.70, 17.5cm × 17.5cm square= £14.81, 17cm × 17cm sacral= £11.56, 22cm × 22cm sacral= £15.49, 7.5cm × 7.5cm square= £3.72, **Heel Non-Adhesive dressing** 10.5cm × 13.5cm= £11.46, **Non-Adhesive dressing** 10cm × 10cm square= £6.54, 15cm × 15cm square= £12.40, 20cm × 20cm square= £18.16, 5cm × 5cm square= £3.47

Biatain Ag
Silver impregnated polyurethane foam film dressing, with or without adhesive border
Biatain Ag (Coloplast Ltd) cavity dressing 5cm × 8cm= £4.29, dressing 10cm × 10cm square= £8.60, 10cm × 20cm rectangular= £15.81, 12.5cm × 12.5cm square= £9.84, 15cm × 15cm square= £17.27, 18cm × 18cm square= £19.74, 19cm × 20cm heel= £19.47, 20cm × 20cm square= £24.35, 23cm × 23cm sacral= £20.69, 5cm × 7cm rectangular= £3.54

PolyMem Silver
Silver impregnated polyurethane foam film dressing, with or without adhesive border
PolyMem Silver (H & R Healthcare Ltd) WIC dressing 8cm × 8cm= £7.19, dressing 10.8cm × 10.8cm square= £9.04, 12.7cm × 8.8cm oval= £5.71, 17cm × 19cm rectangular= £18.11, 5cm × 7.6cm oval= £2.32

Hydrocolloid dressings

Aquacel Ag
Soft non-woven pad containing hydrocolloid fibres, (silver impregnated)
Aquacel Ag (ConvaTec Ltd) Ribbon dressing 1cm × 45cm= £3.28, 2cm × 45cm= £5.02, dressing 10cm × 10cm square= £4.99, 15cm × 15cm square= £9.40, 20cm × 30cm rectangular= £23.32, 4cm × 10cm rectangular= £3.04, 4cm × 20cm rectangular= £3.96, 4cm × 30cm rectangular= £5.93

Low adherence dressing

Acticoat
Three-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)
Acticoat dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £9.12, 10cm × 20cm rectangular= £14.26, 20cm × 40cm rectangular= £48.81, 5cm × 5cm square= £3.74

Acticoat 7
Five-layer antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)
Acticoat 7 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £19.34, 15cm × 15cm square= £34.77, 5cm × 5cm square= £6.49

Acticoat Flex 3
Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 3-day wear)
Acticoat Flex 3 dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm square= £9.22, 10cm × 20cm rectangular= £14.42, 20cm × 40cm rectangular= £49.35, 5cm × 5cm square= £3.78

Acticoat Flex 7
Conformable antimicrobial barrier dressing consisting of a polyester core between low adherent silver-coated high density polyethylene mesh (for 7-day wear)
Acticoat Flex 7 dressing (Smith & Nephew Healthcare Ltd) 10cm × 12.5cm rectangular= £19.56, 15cm × 15cm square= £35.16, 5cm × 5cm square= £6.56

Atrauman Ag
Non-adherent polyamide fabric impregnated with silver and neutral triglycerides
Atrauman Ag dressing (Paul Hartmann Ltd) 10cm × 10cm= £1.33, 10cm × 20cm= £2.59, 5cm × 5cm= £0.55

Soft polymer dressings

Allevyn Ag Gentle
Soft polymer wound contact dressing, with silver sulfadiazine impregnated polyurethane foam layer, with or without adhesive border
Allevyn Ag Gentle (Smith & Nephew Healthcare Ltd) Border dressing 10cm × 10cm= £6.78, 12.5cm × 12.5cm= £8.71, 17.5cm × 17.5cm= £16.61, 7.5cm × 7.5cm= £4.51, dressing 10cm × 10cm= £6.58, 10cm × 20cm= £10.88, 15cm × 15cm= £12.24, 20cm × 20cm= £18.13, 5cm × 5cm= £3.53

Mepilex Ag
Soft silicone wound contact dressing with polyurethane foam film backing, with silver, with or without adhesive border
Mepilex (Molnlycke Health Care Ltd) Ag dressing 10cm × 10cm= £6.45, 10cm × 20cm= £10.63, 15cm × 15cm= £11.97, 20cm × 20cm= £17.73, 20cm × 50cm= £66.54, Border Ag dressing 10cm × 12.5cm= £6.49, 10cm × 20cm= £9.44, 10cm × 30cm= £14.17, 15cm × 17.5cm= £11.91, 17cm × 20cm= £15.43, 7cm × 7.5cm= £3.59, Border Sacrum Ag dressing 18cm × 18cm= £12.45, 20cm × 20cm= £15.14, 23cm × 23cm= £19.89, Heel Ag dressing 13cm × 20cm= £13.45, 15cm × 22cm= £15.07

Urgotul Silver
Non-adherent soft polymer wound contact dressing, with silver
Urgotul Silver dressing (Urgo Ltd) 10cm × 12cm= £3.28, 15cm × 20cm= £9.30

With charcoal

Actisorb Silver 220
Knitted fabric of activated charcoal, with one-way stretch, with silver residues, within spun-bonded nylon sleeve
Actisorb Silver 220 dressing (Systagenix Wound Management Ltd) 10.5cm × 10.5cm= £2.66, 10.5cm × 19cm= £4.84, 6.5cm × 9.5cm= £1.70

Other antimicrobials

Cutimed Siltec Sorbact
Polyurethane foam dressing with acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border
Cutimed Siltec Sorbact dressing (BSN medical Ltd) 12.5cm × 12.5cm= £6.87, 15cm × 15cm= £8.51, 17.5cm × 17.5cm= £11.90, 22.5cm × 22.5cm= £18.11, 7.5cm × 7.5cm= £2.68, 17.5cm × 17.5cm sacral= £8.60, 23cm × 23cm sacral= £12.93

Cutimed Sorbact
Low adherence acetate tissue impregnated with dialkylcarbamoyl chloride; dressing pad, swabs, round swabs or ribbon gauze, cotton
Cutimed Sorbact (BSN medical Ltd) Ribbon dressing 2cm × 50cm= £4.30, 5cm × 200cm= £8.47, Round swab 3cm= £3.51, dressing

pad 10cm × 10cm= £5.86, 10cm × 20cm= £9.14, 7cm × 9cm= £3.75, swab 4cm × 6cm= £1.76, 7cm × 9cm= £2.93

Cutimed Sorbact Gel

Hydrogel dressing impregnated with dialkylcarbamoyl chloride

Cutimed Sorbact Gel dressing (BSN medical Ltd) 7.5cm x 15cm rectangular= £4.77, 7.5cm square= £2.83

Cutimed Sorbact Hydroactive

Non-adhesive gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride

Cutimed Sorbact Hydroactive dressing (BSN medical Ltd) 14cm × 14cm= £5.72, 14cm × 24cm= £9.16, 19cm × 19cm= £10.77, 24cm × 24cm= £16.32, 7cm × 8.5cm= £3.92

Cutimed Sorbact Hydroactive B

Gel dressing with hydropolymer matrix and acetate fabric coated with dialkylcarbamoyl chloride, with adhesive border

Cutimed Sorbact Hydroactive B dressing (BSN medical Ltd) 10cm × 10cm= £7.55, 10cm × 20cm= £12.09, 15cm × 15cm= £14.21, 5cm × 6.5cm= £4.24

Flaminal Forte gel

Alginate with glucose oxidase and lactoperoxidase, for moderately to heavily exuding wounds

Flaminal (Flen Health UK Ltd) Forte gel dressing= £8.16

Flaminal Hydro gel

Alginate with glucose oxidase and lactoperoxidase, for lightly to moderately exuding wounds

Flaminal (Flen Health UK Ltd) Hydro gel dressing= £8.16

Kendall AMD

Foam dressing with polihexanide, without adhesive border

Kendall AMD Antimicrobial foam dressing (H & R Healthcare Ltd) 10cm × 10cm square= £4.82, 10cm × 20cm rectangular= £9.13, 15cm × 15cm square= £9.13, 20cm × 20cm square= £13.38, 5cm × 5cm square= £2.56, 8.8cm × 7.5cm rectangular (fenestrated)= £4.33

Kendall AMD Plus

Foam dressing with polihexanide, without adhesive border

Kendall AMD Antimicrobial Plus foam dressing (H & R Healthcare Ltd) 10cm × 10cm square= £5.06, 8.8cm × 7.5cm rectangular (fenestrated)= £4.54

Octenilin Wound gel

Wound gel, hydroxyethylcellulose and propylene glycol, with octenidine hydrochloride

Octenilin Wound Gel (Schulke & Mayr UK Ltd) dressing= £5.02

Prontosan Wound Gel

Hydrogel containing betaine surfactant and polihexanide

Prontosan Wound Gel (B.Braun Medical Ltd) gel dressing= £6.80

Suprasorb X + PHMB

Biosynthetic cellulose fibre dressing with polihexanide

Suprasorb X + PHMB dressing (Lohmann & Rauscher) 14cm × 20cm rectangular= £12.22, 2cm × 21cm rope= £7.61, 5cm × 5cm square= £2.70, 9cm × 9cm square= £5.37

Telfa AMD

Low adherence absorbent perforated plastic film faced dressing with polihexanide

Telfa AMD dressing (H & R Healthcare Ltd) 10cm × 7.5cm= £0.18, 20cm × 7.5cm= £0.28

Telfa AMD Island

Low adherence dressing with adhesive border and absorbent pad, with polihexanide

Telfa AMD Island dressing (H & R Healthcare Ltd) 10cm × 12.5cm= £0.60, 10cm × 20cm= £0.87, 10cm × 25.5cm= £0.99, 10cm × 35cm= £1.23

Chlorhexidine gauze dressing

Bactigras

Fabric of leno weave, weft and warp threads of cotton and/or viscose yarn, impregnated with ointment containing chlorhexidine acetate

Bactigras gauze dressing (Smith & Nephew Healthcare Ltd) 10cm × 10cm, 5cm × 5cm

Irrigation fluids

Octenilin Wound irrigation solution

Aqueous solution containing glycerol, ethylhexylglycerin and octenidine hydrochloride

Octenilin irrigation solution (Schulke & Mayr UK Ltd) 350ml bottles= £4.83

Prontosan Wound Irrigation Solution

Aqueous solution containing betaine surfactant and polihexanide

Prontosan irrigation solution (B.Braun Medical Ltd) 350ml bottles= £5.09, 40ml unit dose= £15.11

Specialised dressings

Protease-modulating matrix dressings

Cadesorb Ointment

Cadesorb (Smith & Nephew Healthcare Ltd) ointment= £9.83

Catrix

Catrix dressing (Cranage Healthcare Ltd) sachets= £3.80

Promogran

Collagen and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

Promogran dressing (Systagenix Wound Management Ltd) 123 square cm= £16.12, 28 square cm= £5.35

Promogran Prisma Matrix

Collagen, silver and oxidised regenerated cellulose matrix, applied directly to wound and covered with suitable dressing

Promogran Prisma dressing (Systagenix Wound Management Ltd) 123 square cm= £18.54, 28 square cm= £6.51

UrgoStart

Soft adherent polymer matrix containing nano-oligosaccharide factor (NOSF), with polyurethane foam film backing

UrgoStart dressing (Urgo Ltd) 10cm × 10cm= £6.50, 15cm × 20cm= £11.68, 6cm × 6cm= £4.70, 12cm × 19cm heel= £8.95

UrgoStart Contact

Non-adherent soft polymer wound contact dressing containing nano-oligosaccharide factor (NOSF)

UrgoStart Contact dressing (Urgo Ltd) 5cm × 7cm= £3.11

Silicone keloid dressings

Silicone gel and gel sheets are used to reduce or prevent hypertrophic and keloid scarring. They should not be used on open wounds. Application times should be increased gradually. Silicone sheets can be washed and reused.

Silicone gel

Bapscarcare

Silicone gel

Bapscarcare (Espere Healthcare Ltd) gel= £17.36

Ciltech

Silicone gel

Ciltech (Su-Med International (UK) Ltd) gel= £50.00

Dermatix

Silicone gel

Dermatix gel (Meda Pharmaceuticals Ltd) = £60.53

Kelo-cote UV

Silicone gel with SPF 30 UV protection

Kelo-cote (Alliance Pharmaceuticals Ltd) UV gel= £17.88

Kelo-cote gel

Silicone gel

Kelo-cote (Alliance Pharmaceuticals Ltd) gel= £51.00

Kelo-cote spray

Silicone spray

Kelo-cote (Alliance Pharmaceuticals Ltd) spray= £51.00

ScarSil

Silicone gel

ScarSil (Jobskin Ltd) gel= £15.19

Silgel STC-SE

Silicone gel

Silgel (Nagor Ltd) STC-SE gel= £19.00

Silicone sheets

Advasil Conform

Self-adhesive silicone gel sheet with polyurethane film backing

Advasil Conform sheet (Advancis Medical) 10cm × 10cm square= £5.44, 15cm × 10cm rectangular= £9.60

Bapscarcare T

Self-adhesive silicone gel sheet

Bapscarcare T sheet (Espere Healthcare Ltd) 10cm × 15cm rectangular= £9.19, 5cm × 30cm rectangular= £9.19, 5cm × 7cm rectangular= £3.22

Cica-Care

Soft, self-adhesive, semi-occlusive silicone gel sheet with backing

Cica-Care sheet (Smith & Nephew Healthcare Ltd) 15cm × 12cm rectangular= £30.40, 6cm × 12cm rectangular= £15.59

Ciltech

Silicone gel sheet

Ciltech sheet (Su-Med International (UK) Ltd) 10cm × 10cm square= £7.50, 10cm × 20cm rectangular= £12.50, 15cm × 15cm square= £14.00

Dermatix

Self-adhesive silicone gel sheet (clear- or fabric-backed)

Dermatix (Meda Pharmaceuticals Ltd) Clear sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88, Fabric sheet 13cm × 13cm square= £15.79, 13cm × 25cm rectangular= £28.53, 20cm × 30cm rectangular= £51.97, 4cm × 13cm rectangular= £6.88

Mepiform

Self-adhesive silicone gel sheet with polyurethane film backing

Mepiform sheet (Molnlycke Health Care Ltd) 4cm × 31cm rectangular= £11.62, 5cm × 7cm rectangular= £3.68, 9cm × 18cm rectangular= £14.38

Scar FX

Self-adhesive, transparent, silicone gel sheet

Scar Fx sheet (Jobskin Ltd) 10cm × 20cm rectangular= £16.00, 22.5cm × 14.5cm shaped= £12.00, 25.5cm × 30.5cm rectangular= £60.00, 3.75cm × 22.5cm rectangular= £12.00, 7.5cm diameter shaped= £8.50

Silgel

Silicone gel sheet

Silgel sheet (Nagor Ltd) 10cm × 10cm square= £13.50, 10cm × 30cm rectangular= £31.50, 10cm × 5cm rectangular= £7.50, 15cm × 10cm rectangular= £19.50, 20cm × 20cm square= £40.00, 25cm × 15cm shaped= £21.12, 30cm × 5cm rectangular= £19.50, 40cm × 40cm square= £144.00, 46cm × 8.5cm shaped= £39.46, 5.5cm diameter shaped= £4.00

Adjunct dressings and appliances

Surgical absorbents

Surgical absorbents applied directly to the wound have many disadvantages—dehydration of and adherence to the wound, shedding of fibres, and the leakage of exudate (‘strike through’) with an associated risk of infection. Gauze and cotton absorbent dressings can be used as secondary layers in the management of heavily exuding wounds (but see also Capillary-action dressings). Absorbent cotton gauze fabric can be used for swabbing and cleaning skin. Ribbon gauze can be used post-operatively to pack wound cavities, but adherence to the wound bed will cause bleeding and tissue damage on removal of the dressing—an advanced wound dressing (e.g. hydrocolloid-fibrous, foam, or alginate) layered into the cavity is often more suitable.

Cotton

Absorbent Cotton, BP

Carded cotton fibres of not less than 10 mm average staple length, available in rolls and balls

Absorbent (Robert Bailey & Son Plc) cotton BP 1988

Absorbent Cotton, Hospital Quality

As for absorbent cotton but lower quality materials, shorter staple length etc.

Absorbent (Robert Bailey & Son Plc) cotton hospital quality

Gauze and cotton tissue

Gamgee Tissue (blue)

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

Gamgee (Robinson Healthcare) tissue blue label

Gamgee Tissue (pink)

Consists of absorbent cotton enclosed in absorbent cotton gauze type 12 or absorbent cotton and viscose gauze type 2

Gamgee (Robinson Healthcare) tissue pink label DT

Gauze and tissue

Absorbent Cotton Gauze, BP 1988

Cotton fabric of plain weave, in rolls and as swabs (see below), usually Type 13 light, sterile

Absorbent (Robert Bailey & Son Plc) cotton BP 1988

Alvita (Alliance Healthcare (Distribution) Ltd) absorbent cotton BP 1988

Clini (CliniSupplies Ltd) absorbent cotton BP 1988

Vernaid (Synergy Health (UK) Ltd) absorbent cotton BP 1988

Absorbent Cotton and Viscose Ribbon Gauze, BP 1988

Woven fabric in ribbon form with fast selvedge edges, warp threads of cotton, weft threads of viscose or combined cotton and viscose yarn, sterile

Vernaid Fast Edge ribbon gauze sterile (Synergy Health (UK) Ltd) 1.25cm, 2.5cm

Lint

Absorbent Lint, BPC

Cotton cloth of plain weave with nap raised on one side from warp yarns

Absorbent (Robinson Healthcare) lint

Alvita (Alliance Healthcare (Distribution) Ltd) absorbent lint BPC

Clini (CliniSupplies Ltd) absorbent lint BPC

Pads

Drisorb

Absorbent Dressing Pads, Sterile

Drisorb (Synergy Health (UK) Ltd) dressing pad 10cm × 20cm= £0.17

PremierPad

Absorbent Dressing Pads, Sterile

PremierPad dressing pad (Shermond) 10cm × 20cm= £0.18, 20cm × 20cm= £0.25

XuPad

Absorbent Dressing Pads, Sterile

Xupad dressing pad (Richardson Healthcare Ltd) 10cm × 20cm= £0.17, 20cm × 20cm= £0.28, 20cm × 40cm= £0.40

Wound drainage pouches

Wound drainage pouches can be used in the management of wounds and fistulas with significant levels of exudate.

Eakin Access window

For use with Eakin ® pouches

Eakin access window large (Pelican Healthcare Ltd) = £40.22

Eakin Wound pouch, bung closure

Wound pouch, bung closure

Eakin wound drainage bag with bung closure (Pelican Healthcare Ltd) large= £109.17, medium= £80.44, small= £57.46, and access window for horizontal wounds, extra large= £109.17, for horizontal wounds, extra large= £97.68, for vertical incision wounds, extra large= £97.68, wounds, extra large= £97.68

Eakin Wound pouch, fold and tuck closure

Wound pouch, fold and tuck closure

Eakin wound drainage bag with fold and tuck closure (Pelican Healthcare Ltd) large= £97.68, medium= £74.70, small= £51.71, extra large= £86.19

Option Wound Manager

Wound drainage bag

Option wound manager bag (Oakmed Ltd) large= £168.34, medium= £141.24, small= £138.17, square= £147.38, extra small= £124.22

Option Wound Manager with access port
Wound drainage bag, with access port
Option wound manager bag with access port (Oakmed Ltd) large= £179.95, medium= £147.38, small= £144.31, square= £153.52, extra small= £135.83

Option Wound Manager, cut to fit
Wound drainage bag, cut to fit
Option wound manager bag (Oakmed Ltd) large= £88.50, medium= £84.50, small= £76.27

Welland Fistula bag
Wound drainage bag, cut-to-fit
Welland (Welland Medical Ltd) Fistula wound drainage bag= £87.45

Physical debridement pads

DebriSoft® is a pad that is used for the debridement of superficial wounds containing loose slough and debris, and for the removal of hyperkeratosis from the skin. DebriSoft® must be fully moistened with a wound cleansing solution before use and is not appropriate for use as a wound dressing.

DebriSoft Pad
Polyester fibres with bound edges and knitted outer surface coated with polyacrylate
Debrisoft (Lohmann & Rauscher) pad 10cm × 10cm= £6.78

Complex adjunct therapies

Topical negative pressure therapy

Accessories

Renasys
Soft port and connector
Renasys (Smith & Nephew Healthcare Ltd) Soft Port= £11.78, connector for use with soft port= £3.47

V.A.C.
Drape, gel for canister, Sensa T.R.A.C. Pad
SensaT.R.A.C.(KCI Medical Ltd) pad= £11.45
T.R.A.C.(KCI Medical Ltd) connector= £3.27
V.A.C.(KCI Medical Ltd) drape= £9.70, gel strips= £3.93

WoundASSIST gel strip
WoundASSIST (Huntleigh Healthcare Ltd) TNP gel strip= £3.37

Vacuum assisted closure products

Exsu-Fast kit 1
Dressing Kit
Exsu-Fast (Synergy Health (UK) Ltd) dressing kit 1= £28.04

Exsu-Fast kit 2
Dressing Kit
Exsu-Fast (Synergy Health (UK) Ltd) dressing kit 2= £35.83

Exsu-Fast kit 3
Dressing Kit
Exsu-Fast (Synergy Health (UK) Ltd) dressing kit 3= £35.83

Exsu-Fast kit 4
Dressing Kit
Exsu-Fast (Synergy Health (UK) Ltd) dressing kit 4= £28.04

V.A.C GranuFoam
Polyurethane foam dressing (with adhesive drapes and pad connector); with or without silver
V.A.C. GranuFoam (KCI Medical Ltd) Bridge dressing kit= £33.50, Silver with SensaT.R.A.C dressing kit medium= £39.77, small= £34.29, dressing kit large= £33.14, medium= £28.57, small= £24.00

V.A.C Simplace
Spiral-cut polyurethane foam dressings, vapour-permeable adhesive film dressings (with adhesive drapes and pad connector)
V.A.C. Simplace EX dressing kit (KCI Medical Ltd) medium= £31.98, small= £27.81

V.A.C WhiteFoam
Polyvinyl alcohol foam dressing or dressing kit
V.A.C. WhiteFoam dressing (KCI Medical Ltd) large= £17.82, small= £11.13, kit large= £35.07, small= £27.09

WoundASSIST
Wound pack and channel drain
WoundASSIST TNP dressing pack (Huntleigh Healthcare Ltd) medium/large= £23.85, small/medium= £20.81, channel drain medium/large= £23.85, small/medium= £20.81, extra large= £34.05

Wound drainage collection devices

ActiV.A.C.
Canister with gel
ActiV.A.C (KCI Medical Ltd) canister with gel= £29.71

S-Canister
Canister kit
S-Canister (Smith & Nephew Healthcare Ltd) kit= £19.00

V.A.C Freedom
Canister with gel
V.A.C.(KCI Medical Ltd) Freedom Canister with gel= £30.17

Venturi
Canister kit with solidifier
Venturi (Talley Group Ltd) Compact canister kit= £12.81, canister kit= £12.81

WoundASSIST wound pack
Canister
WoundASSIST (Huntleigh Healthcare Ltd) TNP canister= £20.30

Wound care accessories

Dressing packs

The role of dressing packs is very limited. They are used to provide a clean or sterile working surface; some packs shown below include cotton wool balls, which are not recommended for use on wounds.

Multiple Pack Dressing No. 1
Contains absorbent cotton, absorbent cotton gauze type 13 light (sterile), open-wove bandages (banded)
Vernaid (Synergy Health (UK) Ltd) multiple pack dressing

Non-drug tariff specification sterile dressing packs

Dressit
Vitrex gloves, large apron, disposable bag, paper towel, softswabs, adsorbent pad, sterile field
Dressit sterile dressing pack (Richardson Healthcare Ltd) with medium/large gloves= £0.60, small/medium gloves= £0.60

Nurse It
Contains latex-free, powder-free nitrile gloves, sterile laminated paper sheet, large apron, non-woven swabs, paper towel, disposable bag, compartmented tray, disposable forceps, paper measuring tape
Nurse It sterile dressing pack (Medicareplus International Ltd) with medium/large gloves= £0.81, small/medium gloves= £0.81

Polyfield Nitrile Patient Pack
Contains powder-free nitrile gloves, laminate sheet, non-woven swabs, towel, polythene disposable bag, apron
Polyfield Nitrile Patient Pack (Shermond) with large gloves= £0.52, medium gloves= £0.52, small gloves= £0.52

Sterile Dressing Pack with Non-Woven Pads

Vernaid
(Drug Tariff specification 35). Contains non-woven fabric covered dressing pad, non-woven fabric swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper
Vernaid (Synergy Health (UK) Ltd) sterile dressing pack with non-woven pads

Sterile dressing packs

Vernaid
(Drug Tariff specification 10). Contains gauze and cotton tissue pad, gauze swabs, absorbent cotton wool balls, absorbent paper towel, water repellent inner wrapper
Vernaid (Synergy Health (UK) Ltd) sterile dressing pack

Woven and fabric swabs

Gauze Swab, PB 1988
Consists of absorbent cotton gauze type 13 light or absorbent cotton and viscose gauze type 1 folded into

squares or rectangles of 8-ply with no cut edges exposed, sterile or non-sterile

Alvita gauze swab 8ply (Alliance Healthcare (Distribution) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

CS (CliniSupplies Ltd) gauze swab 8ply non-sterile 10cm × 10cm

Clini gauze swab 8ply (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Gauze (Robert Bailey & Son Plc) swab 8ply non-sterile 10cm × 10cm

MeCoBo gauze swab 8ply (MeCoBo Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Propax gauze (BSN medical Ltd) swab 8ply sterile 7.5cm × 7.5cm

Sovereign (Waymade Healthcare Plc) gauze swab 8ply sterile 7.5cm × 7.5cm

Steraid gauze swab 8ply (Robert Bailey & Son Plc) sterile 7.5cm × 7.5cm

Vernaid gauze swab 8ply (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Non-woven Fabric Swab

(Drug Tariff specification 28). Consists of non-woven fabric folded 4-ply; alternative to gauze swabs, type 13 light, sterile or non-sterile

CS non-woven fabric swab 4ply (CliniSupplies Ltd) non-sterile 10cm × 10cm

Clini non-woven fabric swab 4ply (CliniSupplies Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

CliniMed non-woven fabric swab 4ply (CliniMed Ltd) non-sterile 10cm × 10cm

MeCoBo non-woven fabric swab 4ply (MeCoBo Ltd) non-sterile 10cm × 10cm

Multisorb non-woven fabric swab 4ply (BSN medical Ltd) sterile 7.5cm × 7.5cm

Sofsorb non-woven fabric swab 4ply (Synergy Health (UK) Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Softswab non-woven fabric swab 4ply (Richardson Healthcare Ltd) non-sterile 10cm × 10cm, sterile 7.5cm × 7.5cm

Topper (Systagenix Wound Management Ltd) 8 non-woven fabric swab 4ply non-sterile 10cm × 10cm

Filmated non-woven Fabric Swab

Regal

(Drug Tariff specification 29). Film of viscose fibres enclosed within non-woven viscose fabric folded 8-ply, non-sterile

Regal (Systagenix Wound Management Ltd) filmated swab 8ply 10cm × 10cm

Surgical adhesive tapes

Adhesive tapes are useful for retaining dressings on joints or awkward body parts. These tapes, particularly those containing rubber, can cause irritant and allergic reactions in susceptible patients; synthetic adhesives have been developed to overcome this problem, but they, too, may sometimes be associated with reactions. Synthetic adhesive, or silicon adhesive, tapes can be used for patients with skin reactions to plasters and strapping containing rubber, or undergoing prolonged treatment.

Adhesive tapes that are occlusive may cause skin maceration. Care is needed not to apply these tapes under tension, to avoid creating a tourniquet effect. If applied over joints they need to be orientated so that the area of maximum extensibility of the fabric is in the direction of movement of the limb.

Occlusive adhesive tapes

Blenderm

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with a polymericadhesive mass

Blenderm (3M Health Care Ltd) tape 5cm= £3.43

Sleek

(Impermeable Plastic Adhesive Tape, BP 1988). Extensible water-impermeable plastic film spread with an adhesive mass

Leukoplast Sleek tape (BSN medical Ltd) 2.5cm, 5cm, 7.5cm

Permeable adhesive tapes

3m Kind Removal Silicone Tape

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

3M Micropore Silicone tape (3M Health Care Ltd) 2.5cm= £3.65, 5cm= £6.60

Chemifix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

Chemifix tape (Medicareplus International Ltd) 10cm= £2.10, 2.5cm= £0.90, 5cm= £1.40

Chemipore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Chemipore tape (Medicareplus International Ltd) 1.25cm= £0.27, 2.5cm= £0.70, 5cm= £0.95

Clinipore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Clinipore tape (CliniSupplies Ltd) 1.25cm= £0.36, 2.5cm= £0.75, 5cm= £1.02

Elastoplast

(Elastic Adhesive Tape, BP 1988). Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads, spread with adhesive mass containing zinc oxide

Tensoplast (BSN medical Ltd) elastic adhesive tape 2.5cm

Hypafix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

Hypafix tape (BSN medical Ltd) 10cm= £4.86, 15cm= £7.20, 2.5cm= £1.75, 20cm= £9.55, 30cm= £13.80, 5cm= £2.78

Insil

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

Insil tape (Insight Medical Products Ltd) 2cm= £5.77, 4cm= £5.77

Leukofix

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Leukofix tape (BSN medical Ltd) 1.25cm= £0.58, 2.5cm= £0.94, 5cm= £1.65

Leukopor

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Leukopor tape (BSN medical Ltd) 1.25cm= £0.51, 2.5cm= £0.80, 5cm= £1.41

Mediplast

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Mediplast tape (Neomedic Ltd) 1.25cm= £0.30, 2.5cm= £0.50

Mediplast

Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide

Mediplast Zinc Oxide plaster (Neomedic Ltd) 1.25cm= £0.82, 2.5cm= £1.19, 5cm= £1.99, 7.5cm= £2.99

Mefix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

Mefix tape (Molnlycke Health Care Ltd) 10cm= £3.03, 15cm= £4.13, 2.5cm= £1.07, 20cm= £5.29, 30cm= £7.60, 5cm= £1.90

Mepitac

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

Mepitac tape (Molnlycke Health Care Ltd) 2cm= £7.28, 4cm= £7.28

Micropore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Micropore tape (3M Health Care Ltd) 1.25cm= £0.63, 2.5cm= £0.93, 5cm= £1.65

Omnifix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

Omnifix tape (Paul Hartmann Ltd) 10cm= £4.29, 15cm= £6.32, 5cm= £2.54

OpSite Flexifix Gentle

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

OpSite Flexifix Gentle tape (Smith & Nephew Healthcare Ltd) 2.5cm= £11.00, 5cm= £20.62

Primafix

(Permeable, Apertured Non-Woven Synthetic Adhesive Tape, BP 1988). Non-woven fabric with a polyacrylate adhesive

Primafix tape (Smith & Nephew Healthcare Ltd) 10cm= £2.49, 15cm= £3.67, 20cm= £4.52, 5cm= £1.70

Scanpor

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Scanpor tape (Bio-Diagnostics Ltd) 1.25cm= £0.57, 2.5cm= £0.95, 5cm= £1.80, 7.5cm= £2.64

Siltape

Soft silicone, water-resistant, knitted fabric, polyurethane film adhesive tape

Siltape (Advancis Medical) 2cm= £5.86, 4cm= £5.86

Strappal

Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide

Strappal adhesive tape (BSN medical Ltd) 2.5cm= £1.48, 5cm= £2.50, 7.5cm= £3.76

Transpore

(Permeable Non-Woven Synthetic Adhesive Tape, BP 1988). Backing of paper-based or non-woven textile material spread with a polymeric adhesive mass

Transpore tape (3M Health Care Ltd) 2.5cm= £0.86, 5cm= £1.51

Zinc Oxide Adhesive Tape, BP 1988

Fabric, plain weave, warp and weft of cotton and /or viscose, spread with an adhesive containing zinc oxide

Fast Aid zinc oxide adhesive tape (Robinson Healthcare) 1.25cm, 2.5cm, 5cm, 7.5cm

Skin closure dressings

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

Skin closure strips, sterile

Leukostrip

Drug Tariff specifies that these are specifically for personal administration by the prescriber

Leukostrip (Smith & Nephew Healthcare Ltd) skin closure strips 6.4mm × 76mm= £6.73

Omnistrip

Drug Tariff specifies that these are specifically for personal administration by the prescriber

Omnistrip (Paul Hartmann Ltd) skin closure strips sterile 6mm × 76mm= £25.56

Steri-strip

Drug Tariff specifies that these are specifically for personal administration by the prescriber

Steri-strip (3M Health Care Ltd) skin closure strips 6mm × 75mm= £8.93

Bandages

Non-extensible bandages

Skin closure strips are used as an alternative to sutures for minor cuts and lacerations. Skin tissue adhesive can be used for closure of minor skin wounds and for additional suture support.

Open-wove Bandage, Type 1 BP 1988

Cotton cloth, plain weave, warp of cotton, weft of cotton, viscose, or combination, one continuous length

Clini open wove bandage Type 1 BP 1988 (CliniSupplies Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

Vernaid white open wove bandage (Synergy Health (UK) Ltd) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

White open wove bandage (Robert Bailey & Son Plc) 10cm × 5m, 2.5cm × 5m, 5cm × 5m, 7.5cm × 5m

Triangular Calico Bandage, BP 1980

Unbleached calico right-angled triangle

Clini (CliniSupplies Ltd) triangular calico bandage BP 1980 90cm × 127cm

Triangular (BSN medical Ltd) calico bandage 90cm × 127cm

Light-weight conforming bandages

Lightweight conforming bandages are used for dressing retention, with the aim of keeping the dressing close to the wound without inhibiting movement or restricting blood flow. The elasticity of conforming-stretch bandages (also termed contour bandages) is greater than that of cotton conforming bandages.

Acti-Wrap

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Acti-Wrap (cohesive/latex free) bandage (L&R Medical UK Ltd) 10cm × 4m= £0.86, 6cm × 4m= £0.50, 8cm × 4m= £0.72

Easifix

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Easifix bandage (BSN medical Ltd) 10cm × 4m= £0.53, 15cm × 4m= £0.91, 5cm × 4m= £0.37, 7.5cm × 4m= £0.45

Easifix K

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

Easifix K bandage (BSN medical Ltd) 10cm × 4m= £0.19, 15cm × 4m= £0.34, 2.5cm × 4m= £0.10, 5cm × 4m= £0.11, 7.5cm × 4m= £0.17

Hospiform

Fabric, plain weave, warp of polyamide, weft of viscose

Hospiform bandage (Paul Hartmann Ltd) 10cm × 4m= £0.20, 12cm × 4m= £0.25, 6cm × 4m= £0.14, 8cm × 4m= £0.18

K-Band

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

K-Band bandage (Urgo Ltd) 10cm × 4m= £0.30, 15cm × 4m= £0.52, 5cm × 4m= £0.21, 7cm × 4m= £0.27

Knit Fix

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

Knit Fix bandage (Robert Bailey & Son Plc) 10cm × 4m= £0.17, 15cm × 4m= £0.33, 5cm × 4m= £0.12, 7cm × 4m= £0.17

Knit-Band

Fabric, knitted warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length. 4 m stretched

Knit-Band bandage (CliniSupplies Ltd) 10cm × 4m= £0.18, 15cm × 4m= £0.31, 5cm × 4m= £0.10, 7cm × 4m= £0.16

Kontour

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Kontour bandage (Easigrip Ltd) 10cm × 4m= £0.40, 15cm × 4m= £0.66, 5cm × 4m= £0.28, 7.5cm × 4m= £0.35

Mollelast

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Mollelast (Lohmann & Rauscher) bandage 4cm × 4m= £0.32

Peha-haft

Polyamide and Cellulose Contour Bandage, cohesive, latex-free

Peha-haft bandage (Paul Hartmann Ltd) 10cm × 4m= £0.81, 12cm × 4m= £0.95, 2.5cm × 4m= £0.77, 4cm × 4m= £0.50, 6cm × 4m= £0.59, 8cm × 4m= £0.70

PremierBand

Polyamide and Cellulose Contour Bandage

PremierBand bandage (Shermond) 10cm × 4m= £0.17, 15cm × 4m= £0.25, 5cm × 4m= £0.12, 7.5cm × 4m= £0.14

Slinky

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Slinky bandage (Molnlycke Health Care Ltd) 10cm × 4m= £0.72, 15cm × 4m= £1.05, 7.5cm × 4m= £0.60

Stayform

Fabric, plain weave, warp of polyamide filament, weft of cotton or viscose, fast edges, one continuous length, 4 m stretched (all)

Stayform bandage (Robinson Healthcare) 10cm × 4m= £0.40, 15cm × 4m= £0.69, 5cm × 4m= £0.29, 7.5cm × 4m= £0.36

Tubular bandages and garments

Tubular bandages are available in different forms, according to the function required of them. Some are used under orthopaedic casts and some are suitable for protecting areas to which creams or ointments (other than those containing potent corticosteroids) have been applied. The conformability of the elasticated versions makes them particularly suitable for retaining dressings on difficult parts of the body or for soft tissue injury, but their use as the only means of applying pressure to an oedematous limb or to a varicose ulcer is not appropriate, since the pressure they exert is inadequate. Compression hosiery reduces the recurrence of venous leg ulcers and should be considered for use after wound healing. Silk clothing is available as an alternative to elasticated viscose stockinette garments, for use in the management of severe eczema and allergic skin conditions.

Elasticated Surgical Tubular Stockinette, Foam padded is used for relief of pressure and elimination of friction in relevant area; porosity of foam lining allows normal water loss from skin surface.

For *Elasticated Tubular Bandage, BP* 1993, where no size stated by the prescriber, the 50 cm length should be supplied and width endorsed.

Non-elasticated Cotton Stockinette, Bleached, BP 1988 1m lengths is used as basis (with wadding) for Plaster of Paris bandages etc.; 6 m length, compression bandage.

For *Non-elasticated Ribbed Cotton and Viscose Surgical Tubular Stockinette, BP* 1988, the Drug Tariff specifies various combinations of sizes to provide sufficient material for part or full body coverage. It is used as protective dressings with tar-based and other steroid ointments.

Elasticated

Acti-Fast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage

Acti-Fast 2-way stretch stockinette (L&R Medical UK Ltd) 10.75cm= £5.96, 17.5cm= £1.91, 20cm= £3.31, 3.5cm= £0.59, 5cm= £0.61, 7.5cm= £0.81

Clinifast

(Drug Tariff specification 46). Lightweight plain-knitted elasticated tubular bandage; various colours and sizes

Support bandages

Light support bandages, which include the various forms of crepe bandage, are used in the prevention of oedema; they are also used to provide support for mild sprains and joints but their effectiveness has not been proven for this purpose. Since they have limited extensibility, they are able to provide light support without exerting undue pressure. For a warning against injudicious compression see Compression bandages.

Cotton Crepe Bandage, BP 1988

Fabric, plain weave, warp of crepe-twisted cotton threads, weft of cotton and/or viscose threads; stretch bandage. 4.5 m stretched (both)

Elastocrepe bandage (BSN medical Ltd) 10cm × 4.5m, 7.5cm × 4.5m

Flexocrepe bandage (Robinson Healthcare) 10cm × 4.5m, 7.5cm × 4.5m

Sterocrepe bandage (Steroplast Healthcare Ltd) 10cm × 4.5m, 7.5cm × 4.5m

Crepe Bandage, BP 1988

Fabric, plain weave, warp of wool threads and crepe-twisted cotton threads, weft of cotton threads; stretch bandage; 4.5 m stretched

Alvita crepe bandage (Alliance Healthcare (Distribution) Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m
Clinicrepe bandage (CliniSupplies Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m
Crepe bandage (Robert Bailey & Son Plc) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m
Propax crepe bandage (BSN medical Ltd) 10cm × 4.5m, 15cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

Fabric, cotton, polyamide, and elastane; light support bandage (Type 2), 4.5 m stretched (all)
Soffcrepe bandage (BSN medical Ltd) 10cm × 4.5m= £1.32, 15cm × 4.5m= £1.92, 5cm × 4.5m= £0.74, 7.5cm × 4.5m= £1.04

Adhesive bandages

Elastic adhesive bandages are used to provide compression in the treatment of varicose veins and for the support of injured joints; they should no longer be used for the support of fractured ribs and clavicles. They have also been used with zinc paste bandage in the treatment of venous ulcers, but they can cause skin reactions in susceptible patients and may not produce sufficient pressures for healing (significantly lower than those provided by other compression bandages).

Elastic Adhesive Bandage, BP 1993
Woven fabric, elastic in warp (crepe-twisted cotton threads), weft of cotton and/or viscose threads spread with adhesive mass containing zinc oxide. 4.5 m stretched
Tensoplast bandage (BSN medical Ltd) 10cm × 4.5m, 5cm × 4.5m, 7.5cm × 4.5m

Cohesive bandages

Cohesive bandages adhere to themselves, but not to the skin, and are useful for providing support for sports use where ordinary stretch bandages might become displaced and adhesive bandages are inappropriate. Care is needed in their application, however, since the loss of ability for movement between turns of the bandage to equalise local areas of high tension carries the potential for creating a tourniquet effect. Cohesive bandages can be used to support sprained joints and as an outer layer for multi-layer compression bandaging; they should not be used if arterial disease is suspected.

Cohesive extensible bandages

Coban
Bandage
Coban (3M Health Care Ltd) self-adherent bandage 10cm × 6m= £2.98

Profore #4
Bandage
Profore #4 (Smith & Nephew Healthcare Ltd) bandage 10cm × 2.5m= £3.46, latex free bandage 10cm × 2.5m= £3.76

Ultra Fast
Bandage
Ultra (Robinson Healthcare) Fast cohesive bandage 10cm × 6.3m= £2.62

Compression bandages

High compression products are used to provide the high compression needed for the management of gross varices, post-thrombotic venous insufficiency, venous leg ulcers, and gross oedema in average-sized limbs. Their use calls for an expert knowledge of the elastic properties of the products and experience in the technique of providing careful graduated compression. Incorrect application can lead to uneven and inadequate pressures or to hazardous levels of pressure. In particular, injudicious use of compression in limbs with arterial disease has been reported to cause severe skin and tissue necrosis (in some instances calling for amputation). Doppler testing is required before treatment with compression. Oral pentoxifylline p. 253 can be used as adjunct therapy if a chronic venous leg ulcer does not respond to compression bandaging [unlicensed indication].

High compression bandages

High Compression Bandage
Cotton, viscose, nylon, and Lycra ® extensible bandage, 3 m (unstretched)
K-ThreeC (Urgo Ltd) bandage 10cm × 3m= £2.98
SurePress (ConvaTec Ltd) bandage 10cm × 3m= £3.85

PEC High Compression Bandages
Polyamide, elastane, and cotton compression (high) extensible bandage, 3.5 m unstretched

Setopress (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £3.71

VEC High Compression Bandages
Viscose, elastane, and cotton compression (high) extensible bandage, 3 m unstretched (both)
Tensopress bandage (BSN medical Ltd) 10cm × 3m= £3.67, 7.5cm × 3m= £2.86

Actico
Bandage
Actico bandage (L&R Medical UK Ltd) 10cm × 6m= £3.56, 12cm × 6m= £4.54, 4cm × 6m= £2.55, 6cm × 6m= £2.98, 8cm × 6m= £3.43

Comprilan
Bandage
Comprilan bandage (BSN medical Ltd) 10cm × 5m= £3.59, 12cm × 5m= £4.38, 6cm × 5m= £2.85, 8cm × 5m= £3.34

Rosidal K
Bandage
Rosidal K bandage (Lohmann & Rauscher) 10cm × 10m= £6.33, 10cm × 5m= £3.63, 12cm × 5m= £4.41, 6cm × 5m= £2.79, 8cm × 5m= £3.33

Sub-compression wadding bandage

Cellona Undercast Padding
Padding
Cellona Undercast padding bandage (Lohmann & Rauscher) 10cm × 2.7m= £0.49, 15cm × 2.7m= £0.64, 5cm × 2.7m= £0.33, 7.5cm × 2.7m= £0.40

Flexi-Ban
Padding
Flexi-Ban (L&R Medical UK Ltd) bandage 10cm × 3.5m= £0.53

K-Soft
Padding
K-Soft (Urgo Ltd) Long bandage 10cm × 4.5m= £0.60, bandage 10cm × 3.5m= £0.48

Ortho-Band Plus
Padding
Ortho-Band (Millpledge Healthcare) Plus bandage 10cm × 3.5m= £0.37

Profore #1
Padding
Profore #1 (Smith & Nephew Healthcare Ltd) bandage 10cm × 3.5m= £0.75, latex free bandage 10cm × 3.5m= £0.81

Softexe
Padding
Softexe (Molnlycke Health Care Ltd) bandage 10cm × 3.5m= £0.62

SurePress
Padding
SurePress (ConvaTec Ltd) bandage 10cm × 3m= £3.85

Ultra Soft
Padding
Ultra (Robinson Healthcare) Soft wadding bandage 10cm × 3.5m= £0.39

Velband
Padding
Velband (BSN medical Ltd) absorbent padding bandage 10cm × 4.5m= £0.77

Multi-layer compression bandaging

Multi-layer compression bandaging systems are an alternative to High Compression Bandages for the treatment of venous leg ulcers. Compression is achieved by the combined effects of two or three extensible bandages applied over a layer of orthopaedic wadding and a wound contact dressing.

Four layer systems

K-Four
Multi-layer compression bandaging kit, four layer system
K-Four (Urgo Ltd) Reduced Compression multi-layer compression bandage kit 18cm+ ankle circumference = £4.72, multi-layer compression bandage kit 18cm-25cm ankle circumference= £7.22, 25cm-30cm ankle circumference= £7.22, greater than 30cm ankle circumference= £9.94, less than 18cm ankle circumference= £7.55

Profore
Multi-layer compression bandaging kit, four layer system
Profore (Smith & Nephew Healthcare Ltd) Lite latex free multi-layer compression bandage kit= £6.33, multi-layer compression bandage kit= £5.82, latex free multi-layer compression bandage kit 18cm-25cm ankle circumference = £10.78, multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.09, 25cm-30cm ankle circumference= £8.37, above 30cm ankle circumference= £12.54, up to 18cm ankle circumference= £10.82

Ultra Four
Multi-layer compression bandaging kit, four layer system
Ultra Four (Robinson Healthcare) Reduced Compression multi-layer compression bandage kit= £4.19, multi-layer compression bandage kit 18cm-25cm ankle circumference= £5.73, up to 18cm ankle circumference= £6.48

Two layer systems

Coban 2
Multi-layer compression bandaging kit, two layer system (latex-free, foam bandage and cohesive compression bandage)
Coban 2 (3M Health Care Ltd) Lite multi-layer compression bandage kit= £8.40, multi-layer compression bandage kit 10cm × 3.5m= £8.40

K Two
Multi-layer compression bandaging kit, two layer system
UrgoKTwo (Urgo Ltd) Reduced latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.98, 25cm-32cm ankle circumference= £9.81, Reduced multi-layer compression bandage kit 18cm-25cm ankle circumference= £8.46, 25cm-32cm ankle circumference= £9.24, latex free multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.98, 25cm-32cm ankle circumference= £9.81, multi-layer compression bandage kit (10cm) 18cm-25cm ankle circumference= £8.46, 25cm-32cm ankle circumference= £9.24, multi-layer compression bandage kit (12cm) 18cm-25cm ankle circumference= £10.66, 25cm-32cm ankle circumference= £11.65, multi-layer compression bandage kit (8cm) 18cm-25cm ankle circumference= £7.98, 25cm-32cm ankle circumference= £8.68, multi-layer compression bandage kit size 0 short 18cm-25cm ankle circumference= £7.14, with UrgoStart multi-layer compression bandage kit 18cm-25cm ankle circumference= £10.54, 25cm-32cm ankle circumference= £11.24

Medicated bandages

Zinc Paste Bandage has been used with compression bandaging for the treatment of venous leg ulcers. However, paste bandages are associated with hypersensitivity reactions and should be used with caution. Zinc paste bandages are also used with coal tar or ichthammol in chronic lichenified skin conditions such as chronic eczema (ichthammol often being preferred since its action is considered to be milder). They are also used with calamine in milder eczematous skin conditions.

Zipzoc® can be used under appropriate compression bandages or hosiery in chronic venous insufficiency.

Zinc Paste Bandage, BP 1993
Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide; requires additional bandaging
Excipients: may include cetostearyl alcohol, hydroxybenzoates
Viscopaste (Evolan Pharma AB) PB7 bandage 7.5cm × 6m= £3.89

Zinc Paste and Ichthammol Bandage, BP 1993
Cotton fabric, plain weave, impregnated with suitable paste containing zinc oxide and ichthammol; requires additional bandaging
Excipients: may include cetostearyl alcohol
Ichthopaste (Evolan Pharma AB) bandage 7.5cm × 6m= £3.92

Zipzoc
Sterile rayon stocking impregnated with ointment containing zinc oxide 20%
Zipzoc (Evolan Pharma AB) stockings= £34.70

Compression hosiery and garments

Compression (elastic) hosiery is used to treat conditions associated with chronic venous insufficiency, to prevent recurrence of thrombosis, or to reduce the risk of further venous ulceration after treatment with compression bandaging. Doppler testing to confirm arterial sufficiency is required before recommending the use of compression hosiery.

Before elastic hosiery can be dispensed, the quantity (single or pair), article (including accessories), and compression class must be specified by the prescriber. There are different compression values for graduated compression hosiery and lymphoedema garments (see below). All dispensed elastic hosiery articles must state on the packaging that they conform with Drug Tariff technical specification No. 40, for further details see Drug Tariff.

Graduated Compression hosiery, Class 1 *Light Support* is used for superficial or early varices, varicosis during pregnancy.

Graduated Compression hosiery, Class 2 *Medium Support* is used for varices of medium severity, ulcer treatment and prophylaxis, mild oedema, varicosis during pregnancy.

Graduated Compression hosiery, Class 3 *Strong Support* is used for gross varices, post thrombotic venous insufficiency, gross oedema, ulcer treatment and prophylaxis.

Compression values for hosiery and lymphoedema garments *Class* 1: Compression hosiery (British standard) 14–17 mmHg, lymphoedema garments (European classification) 18–21 mmHg; *Class* 2 Compression hosiery (British standard) 18–24 mmHg, lymphoedema garments (European classification) 23–32 mmHg; *Class* 3 Compression hosiery (British standard) 25–35 mmHg, lymphoedema garments (European classification) 34–46 mmHg; *Class* 4 Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 49–70 mmHg; *Class* 4 *super* Compression hosiery (British standard)—not available, lymphoedema garments (European classification) 60–90 mmHg.

Graduated compression hosiery

Class 1 Light Support
Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

Class 2 Light Support
Hosiery, compression at ankle 14–17 mmHg, thigh length or below knee with knitted in heel

Accessories

Suspender
Suspender, for thigh stockings

Anklets

Class 2 Medium Support
Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Class 3 Strong Support
Anklets, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Knee caps

Class 2 Medium Support
Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Class 3 Strong Support
Kneecaps, compression 18–24 mmHg, circular knit (standard and made-to-measure)

Lymphoedema garments

Lymphoedema compression garments are used to maintain limb shape and prevent additional fluid retention. Either flat-bed or circular knitting methods are used in the manufacture of elasticated compression garments. Seamless, circular-knitted garments (in standard sizes) can be used to prevent swelling if the lymphoedema is well controlled and if the limb is in good shape and without skin folds. Flat-knitted garments (usually made-to-measure) with a seam, provide greater rigidity and stiffness to maintain reduction of lymphoedema following treatment with compression bandages. A standard range of light, medium, or high compression garments are available, as well as low compression (12–16 mmHg) armsleeves, made-to-measure garments up to compression 90 mmHg, and accessories—see Drug Tariff for details. Note, there are different compression values for lymphoedema garments and graduated compression hosiery, see Compression hosiery and garments above.

Dental Practitioners' Formulary

List of Dental Preparations

The following list has been approved by the appropriate Secretaries of State, and the preparations therein may be prescribed by dental practitioners on form FP10D (GP14 in Scotland, WP10D in Wales).
Licensed **sugar-free** versions, where available, are preferred.
Licensed **alcohol-free** mouthwashes, where available, are preferred.

Aciclovir Cream, BP
Aciclovir Oral Suspension, BP, 200 mg/5 mL
Aciclovir Tablets, BP, 200 mg
Aciclovir Tablets, BP, 800 mg
Amoxicillin Capsules, BP
Amoxicillin Oral Powder, DPF
Amoxicillin Oral Suspension, BP
Artificial Saliva Gel, DPF
Artificial Saliva Oral Spray, DPF
Artificial Saliva Pastilles, DPF
Artificial Saliva Protective Spray, DPF
Artificial Saliva Substitutes as listed below (to be prescribed only for indications approved by ACBS (patients suffering from dry mouth as a result of having or, having undergone, radiotherapy or sicca syndrome):
  BioXtra® Gel Mouthspray
  BioXtra® Moisturising Gel
  Glandosane®
  Saliveze®
Artificial Saliva Substitute Spray, DPF
Aspirin Tablets, Dispersible, BP
Azithromycin Capsules, 250 mg, DPF
Azithromycin Oral Suspension, 200 mg/5 mL, DPF
Azithromycin Tablets, 250 mg, DPF
Azithromycin Tablets, 500 mg, DPF
Beclometasone Pressurised Inhalation, BP, 50 micrograms/metered inhalation, CFC-free, as:
  Clenil Modulite®
Benzydamine Mouthwash, BP 0.15%
Benzydamine Oromucosal Spray, BP 0.15%
Betamethasone Soluble Tablets, 500 micrograms, DPF
Carbamazepine Tablets, BP
Cefalexin Capsules, BP
Cefalexin Oral Suspension, BP
Cefalexin Tablets, BP
Cefradine Capsules, BP
Cetirizine Oral Solution, BP, 5 mg/5 mL
Cetirizine Tablets, BP, 10 mg
Chlorhexidine Gluconate Gel, BP
Chlorhexidine Mouthwash, BP
Chlorhexidine Oral Spray, DPF
Chlorphenamine Oral Solution, BP
Chlorphenamine Tablets, BP
Choline Salicylate Dental Gel, BP
Clarithromycin Oral Suspension, 125 mg/5 mL, DPF
Clarithromycin Oral Suspension, 250 mg/5 mL, DPF
Clarithromycin Tablets, BP
Clindamycin Capsules, BP
Co-amoxiclav Tablets, BP, 250/125 (amoxicillin 250 mg as trihydrate, clavulanic acid 125 mg as potassium salt)
Co-amoxiclav Oral Suspension, BP, 125/31 (amoxicillin 125 mg as trihydrate, clavulanic acid 31.25 mg as potassium salt)/5 mL
Co-amoxiclav Oral Suspension, BP, 250/62 (amoxicillin 250 mg as trihydrate, clavulanic acid 62.5 mg as potassium salt)/5 mL
Diazepam Oral Solution, BP, 2 mg/5 mL
Diazepam Tablets, BP
Diclofenac Sodium Tablets, Gastro-resistant, BP
Dihydrocodeine Tablets, BP, 30 mg
Doxycycline Tablets, Dispersible, BP
Doxycycline Capsules, BP, 100 mg
Doxycycline Tablets, 20 mg, DPF
Ephedrine Nasal Drops, BP
Erythromycin Ethyl Succinate Oral Suspension, BP
Erythromycin Ethyl Succinate Tablets, BP
Erythromycin Stearate Tablets, BP
Erythromycin Tablets, Gastro-resistant, BP
Fluconazole Capsules, 50 mg, DPF
Fluconazole Oral Suspension, 50 mg/5 mL, DPF
Hydrocortisone Cream, BP, 1%
Hydrocortisone Oromucosal Tablets, BP
Hydrogen Peroxide Mouthwash, BP, 6%
Ibuprofen Oral Suspension, BP, sugar-free
Ibuprofen Tablets, BP
Lansoprazole Capsules, Gastro-resistant, BP
Lidocaine Ointment, BP, 5%
Lidocaine Spray 10%, DPF
Loratadine Syrup, 5 mg/5 mL, DPF
Loratadine Tablets, BP, 10 mg
Menthol and Eucalyptus Inhalation, BP 1980
Metronidazole Oral Suspension, BP
Metronidazole Tablets, BP
Miconazole Cream, BP
Miconazole Oromucosal Gel, BP
Miconazole and Hydrocortisone Cream, BP
Miconazole and Hydrocortisone Ointment, BP
Nystatin Oral Suspension, BP
Omeprazole Capsules, Gastro-resistant, BP
Oxytetracycline Tablets, BP
Paracetamol Oral Suspension, BP
Paracetamol Tablets, BP
Paracetamol Tablets, Soluble, BP
Phenoxymethylpenicillin Oral Solution, BP
Phenoxymethylpenicillin Tablets, BP
Promethazine Hydrochloride Tablets, BP
Promethazine Oral Solution, BP
Saliva Stimulating Tablets, DPF
Sodium Chloride Mouthwash, Compound, BP
Sodium Fluoride Mouthwash, BP
Sodium Fluoride Oral Drops, BP
Sodium Fluoride Tablets, BP
Sodium Fluoride Toothpaste 0.619%, DPF
Sodium Fluoride Toothpaste 1.1%, DPF
Sodium Fusidate Ointment, BP
Temazepam Oral Solution, BP
Temazepam Tablets, BP
Tetracycline Tablets, BP

Preparations in this list which are not included in the BP or BPC are described under Details of DPF preparations.
For details of preparations that can be prescribed, see individual entries under the relevant drug monographs throughout the BNF publications.

Details of DPF preparations

Preparations on the List of Dental Preparations which are specified as DPF are described as follows in the DPF.
Although brand names have sometimes been included for identification purposes preparations on the list should be prescribed by non-proprietary name.

Amoxicillin Oral Powder
amoxicillin (as trihydrate) 3 g sachet

Artificial Saliva Gel
consists of lactoperoxidase, lactoferrin, lysozyme, glucose oxidase, xylitol in a gel basis

Artificial Saliva Oral Spray
(proprietary product: *Xerotin*) consists of water, sorbitol, carmellose (carboxymethylcellulose), potassium chloride, sodium chloride, potassium phosphate, magnesium chloride, calcium chloride and other ingredients, pH neutral

Artificial Saliva Pastilles
(proprietary product: *Salivix*), consists of acacia, malic acid, and other ingredients

Artificial Saliva Protective Spray
(proprietary product: *Aequasyal*) consists of oxidised glycerol triesters, silicon dioxide, flavouring agents, aspartame

Artificial Saliva Substitute Spray
(proprietary product: *AS Saliva Orthana Spray*) consists of mucin, methylparaben, benzalkonium chloride, EDTA, xylitol, peppermint oil, spearmint oil, mineral salts

Azithromycin Capsules
azithromycin 250 mg

Azithromycin Oral Suspension 200 mg/5 mL
azithromycin 200 mg/5 mL when reconstituted with water

Azithromycin Tablets
azithromycin 250 mg and 500 mg

Betamethasone Soluble Tablets 500 micrograms
betamethasone (as sodium phosphate) 500 micrograms

Chlorhexidine Oral Spray
(proprietary product: *Corsodyl Oral Spray*), chlorhexidine gluconate 0.2%

Clarithromycin Oral Suspension 125 mg/5 mL
clarithromycin 125 mg/5 mL when reconstituted with water

Clarithromycin Oral Suspension 250 mg/5 mL
clarithromycin 250 mg/5 mL when reconstituted with water

Doxycycline Tablets 20 mg
(proprietary product: *Periostat*), doxycycline (as hyclate) 20 mg

Fluconazole Capsules 50 mg
fluconazole 50 mg

Fluconazole Oral Suspension 50 mg/5 mL
(proprietary product: *Diflucan*), fluconazole 50 mg/5 mL when reconstituted with water

Lidocaine Spray 10%
(proprietary product: *Xylocaine Spray*), lidocaine 10% supplying 10 mg lidocaine/spray

Loratadine Syrup 5 mg/5 mL
loratadine 5 mg/5 mL

Saliva Stimulating Tablets
(proprietary product: *SST*), citric acid, malic acid and other ingredients in a sorbitol base

Sodium Fluoride Toothpaste 0.619%
(proprietary product: *Duraphat '*2800 *ppm' Toothpaste*), sodium fluoride 0.619%

Sodium Fluoride Toothpaste 1.1%
(proprietary product: *Duraphat '*5000 *ppm' Toothpaste*), sodium fluoride 1.1%

Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF)

Nurse Prescribers' Formulary for Community Practitioners

The Nurse Prescribers' Formulary for Community Practitioners is for use by District Nurses and Specialist Community Public Health Nurses (including Health Visitors) who have received nurse prescriber training. It provides a list of preparations approved by the Secretary of State that can be prescribed for patients receiving NHS treatment on form FP10P (form HS21(N) in Northern Ireland, form GP10(N) in Scotland, forms WP10CN and WP10PN in Wales). Community practitioner nurse prescribers should only prescribe items appearing in the nurse prescribers' list set out below (for the indications specified). Most medicinal preparations should be prescribed generically, except where this would not be clinically appropriate or where there is no approved generic name—see individual entries for further information.

The Nurse Prescribers' Advisory Group p. vii oversees the preparation of the NPF and advises UK health ministers on the list of preparations that may be prescribed by community practitioner nurse prescribers. Feedback from nurse prescribers is welcome and will be taken into account when reviewing this list; comments and constructive criticism should be sent to editor@bnf.org.

How to use the NPF

The list of medicinal preparations includes:

- Links to BNF monographs to allow full prescribing information for each preparation to be accessed;
- Details of the indications for which each medicinal preparation can be prescribed;
- Signposting to doses for community practitioner nurse prescribers where these differ from those in the BNF for the specified indications;
- Additional information that should be considered before prescribing certain preparations.

The NPF should be used in conjunction with BNF monographs to ensure that all relevant prescribing information is considered when prescribing decisions are made; links to the relevant BNF monographs allow quick access to this prescribing information. Most of the doses that can be prescribed by nurse prescribers for the specified indications are in line with those in BNF monographs, so the BNF doses for those indications can be used. If doses that can be prescribed by nurse prescribers differ from those in the BNF, specific indications and doses have been added to BNF monographs. These can be found towards the bottom of indication and dose sections of the relevant monographs with the statement “dose approved for use by community practitioner nurse prescribers” following the indication; individual preparation entries signpost to these doses.

General guidance for community practitioner nurse prescribers (Nurse Prescribers' Formulary—General guidance) includes information on prescribing for nurse prescribers and can be found in online versions of the BNF and the BNF app. Treatment summaries for nurse prescribers (e.g. Nurse Prescribers' Formulary—Analgesics) can also be found in online versions of the BNF and the BNF app; these provide an overview of the drug management or prophylaxis of conditions that are commonly managed by nurse prescribers and/or information on the use of appliances, such as stoma appliances. In order to select safe and effective medicines for individual patients, information in the treatment summaries must be used in conjunction with other prescribing details about the drugs and knowledge of the patient's medical and drug history.

Medicinal Preparations

Preparations on this list which are not included in the BP or BPC are described under Details of NPF preparations.

- **Almond oil ear drops p. 1291, BP**
  - ▸ *Removal of ear wax*
- **Arachis oil enema p. 61, NPF**
  - ▸ *To soften impacted faeces*
- **Aspirin tablets, dispersible, 300 mg p. 133, BP** (max. 96 tablets; max. pack size 32 tablets)
  - ▸ *Mild to moderate pain| Pyrexia* (for both indications, see doses for community practitioner nurse prescribers)
- **Bisacodyl suppositories p. 62, BP** (includes 5-mg and 10-mg strengths)
  - ▸ *Constipation* (see dose for community practitioner nurse prescribers)
- **Bisacodyl tablets p. 62, BP**
  - ▸ *Constipation* (see dose for community practitioner nurse prescribers)
- **Catheter maintenance solutions, sodium chloride p. 854, NPF**
  - ▸ *For removal of clots and other debris, to be instilled as required*
- **Catheter maintenance solutions, ‘Solution G’ p. 854, NPF**
  - ▸ *For prevention of catheter encrustation and crystallisation; in very severe cases use ‘Solution R’*
- **Catheter maintenance solutions, ‘Solution R’ p. 854, NPF**
  - ▸ *For prevention of catheter encrustation and dissolution of crystallisation if ‘Solution G’ unsuccessful*
- **Chlorhexidine gluconate alcoholic solutions** containing at least 0.05%, see chlorhexidine p. 1372 and chlorhexidine gluconate with isopropyl alcohol p. 1373
  - ▸ *Skin disinfection*
- **Chlorhexidine gluconate aqueous solutions p. 1372** containing at least 0.05%
  - ▸ *Skin disinfection*
- **Choline salicylate dental gel p. 1308, BP**
  - ▸ *Mild oral and perioral lesions*
- **Clotrimazole cream 1% p. 1324, BP**
  - ▸ *Fungal skin infections*
- **Co-danthramer capsules, NPF** [discontinued]
- **Co-danthramer capsules, strong, NPF** [discontinued]
- **Co-danthramer oral suspension p. 63, NPF**
  - ▸ *In consultation with doctor, constipation in palliative care*
- **Co-danthramer oral suspension, strong p. 63, NPF**
  - ▸ *In consultation with doctor, constipation in palliative care*
- **Co-danthrusate capsules, BP** [discontinued]
- **Co-danthrusate oral suspension p. 63, NPF**
  - ▸ *In consultation with doctor, constipation in palliative care*
- **Crotamiton cream p. 1360, BP**
  - ▸ *Pruritus (including pruritus after scabies)*

- **Crotamiton lotion, BP** [discontinued]
- **Dimeticone barrier creams** containing at least 10%, see barrier creams and ointments p. 1314

▸ *For use as a barrier preparation*

- **Dimeticone lotion p. 1328, NPF**

▸ *Head lice*

- **Docusate sodium capsules p. 61, BP**

▸ *Chronic constipation*

- **Docusate sodium enema p. 61, NPF**

▸ *Chronic constipation*

- **Docusate sodium oral solution p. 61, BP**

▸ *Chronic constipation*

- **Docusate sodium oral solution, paediatric p. 61, BP**

▸ *Chronic constipation*

- **Econazole nitrate cream 1% p. 1324, BP**

▸ *Fungal skin infections*

Emollient creams and ointments, paraffin-containing p. 1318 as listed below:

▸ *Dry skin conditions| Eczema| Psoriasis| Ichthyosis| Pruritus*

- **Cetraben® emollient cream**
- **Dermamist®**
- **Diprobase® cream**
- **Diprobase® ointment**
- **Doublebase®**
- **Doublebase® Dayleve gel**
- **E45® cream**
- **Emulsifying ointment, BP**
- **Hydromol® cream**
- **Hydrous ointment, BP**
- **Lipobase®**
- **Liquid and white soft paraffin ointment, NPF**
- **Neutrogena® Norwegian Formula Dermatological cream** [discontinued]
- **Oilatum® cream**
- **Oilatum® Junior cream**
- **Paraffin, white soft, BP**
- **Paraffin, yellow soft, BP**
- **Ultrabase®**
- **Unguentum M®**

Emollients, urea-containing p. 1319 as listed below:

- **Aquadrate® 10% w/w cream**

▸ *Dry, scaling, and itching skin*

- **Balneum® Plus cream**

▸ *Dry, scaling, and itching skin*

- **E45® Itch Relief cream**

▸ *Dry, scaling, and itching skin*

- **Eucerin® Intensive 10% w/w urea treatment cream**

▸ *Dry skin conditions including eczema, ichthyosis, xeroderma, and hyperkeratosis*

- **Eucerin® Intensive 10% w/w urea treatment lotion**

▸ *Dry skin conditions including eczema, ichthyosis, xeroderma, and hyperkeratosis*

- **Hydromol® Intensive**

▸ *Dry, scaling, and itching skin*

- **Nutraplus® cream**

▸ *Dry, scaling, and itching skin*

Emollient bath and shower products, paraffin-containing p. 1315 as listed below:

- **Aqueous cream, BP**

▸ *Dry skin conditions*

- **Cetraben® emollient bath additive**

▸ *Dry skin conditions, including eczema*

- **Dermalo® bath emollient**

▸ *Dermatitis| Dry skin conditions, including ichthyosis| Pruritus of the elderly*

- **Doublebase® emollient bath additive**

▸ *Dry skin conditions, including dermatitis and ichthyosis| Pruritus of the elderly*

- **Doublebase® emollient shower gel**

▸ *Dry, chapped, or itchy skin conditions*

- **Doublebase® emollient wash gel**

▸ *Dry, chapped, or itchy skin conditions*

- **Hydromol® bath and shower emollient**

▸ *Dry skin conditions| Eczema| Ichthyosis| Pruritus of the elderly*

- **Oilatum® emollient**

▸ *Dry skin conditions including dermatitis and ichthyosis| Pruritus of the elderly*

- **Oilatum® gel** [discontinued]
- **Oilatum® Junior bath additive**

▸ *Dry skin conditions including dermatitis and ichthyosis| Pruritus of the elderly*

- **Zerolatum® emollient medicinal bath oil**

▸ *Dry skin conditions| Dermatitis| Ichthyosis*

Emollient bath and shower products, soya-bean oil-containing p. 1317 as listed below:

- **Balneum®**(except pack sizes that are not to be prescribed under the NHS (see Part XVIIIA of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))

▸ *Dry skin conditions including those associated with dermatitis and eczema*

- **Balneum Plus® bath oil** (except pack sizes that are not to be prescribed under the NHS (see Part XVIIIA of the Drug Tariff, Part XI of the Northern Ireland Drug Tariff))

▸ *Dry skin conditions including those associated with dermatitis and eczema where pruritus also experienced*

- **Folic acid tablets 400 micrograms p. 1112, BP**

▸ *Prevention of neural tube defects (in those at a low risk of conceiving a child with a neural tube defect)*

- **Glycerol suppositories p. 64, BP**

▸ *Constipation*

- **Ibuprofen oral suspension p. 1232, BP** (except for indications and doses that are prescription-only)

▸ *Pain and inflammation in rheumatic disease and other musculoskeletal disorders| Mild to moderate pain including dysmenorrhoea| Migraine| Dental pain| Headache| Fever| Symptoms of colds and influenza| Neuralgia| Mild to moderate pain| Pain and inflammation of soft-tissue injuries| Pyrexia with discomfort| Post-immunisation pyrexia in infants* (for all indications, see doses for community practitioner nurse prescribers)

- **Ibuprofen tablets p. 1232, BP** (except for indications and doses that are prescription-only)

▸ *Pain and inflammation in rheumatic disease and other musculoskeletal disorders| Mild to moderate pain including dysmenorrhoea| Migraine| Dental pain| Headache| Fever| Symptoms of colds and influenza| Neuralgia| Mild to moderate pain| Pain and inflammation of soft-tissue injuries| Pyrexia with discomfort* (for all indications, see doses for community practitioner nurse prescribers)

- **Ispaghula husk granules p. 55, BP**

▸ *Constipation* (see dose for community practitioner nurse prescribers)

- **Ispaghula husk granules, effervescent p. 55, BP**

▸ *Constipation* (see dose for community practitioner nurse prescribers)

- **Ispaghula husk oral powder, BP** [discontinued]
- **Lactulose solution p. 57, BP**

▸ *Constipation* (see dose for community practitioner nurse prescribers)

- **Lidocaine hydrochloride ointment p. 1466, BP**

▸ *Sore nipples from breast-feeding*

- **Lidocaine and chlorhexidine gel, BP**, see chlorhexidine with lidocaine p. 853

▸ *Surface anaesthesia* (see dose for community practitioner nurse prescribers)

- **Macrogol oral liquid, compound, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 58

▸ *Chronic constipation*

- **Macrogol oral powder, compound, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 58

- ▸ *Chronic constipation| Faecal impaction (important: initial assessment by doctor; usual max. duration of treatment 3 days)*
- **Macrogol oral powder, compound, half-strength, NPF**, see macrogol 3350 with potassium chloride, sodium bicarbonate and sodium chloride p. 58
  - ▸ *Chronic constipation| Faecal impaction (important: initial assessment by doctor; usual max. duration of treatment 3 days)*
- **Magnesium hydroxide mixture p. 59, BP**
  - ▸ *Constipation*
- **Magnesium sulfate paste, BP**
  - ▸ *Adjunct in management of boils, apply under dressing; stir before use*
- **Malathion aqueous lotions p. 1328** containing at least 0.5%
  - ▸ *Head lice| Scabies*
- **Mebendazole oral suspension p. 659, NPF**
  - ▸ *Threadworm infections* (see dose for community practitioner nurse prescribers)
- **Mebendazole tablets p. 659, NPF**

Appliances and Reagents (including Wound Management Products)

Community Practitioner Nurse Prescribers in England, Wales and Northern Ireland can prescribe any appliance or reagent in the relevant Drug Tariff. In the Scottish Drug Tariff, Appliances and Reagents which may **not** be prescribed by Nurses are annotated **Nx**.

Appliances (including Contraceptive Devices) as listed in Part IXA of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 3 (Appliances) and Part 2 (Dressings) of the Scottish Drug Tariff). (Where it is not appropriate for nurse prescribers in family planning clinics to prescribe contraceptive devices using form FP10(P) (forms WP10CN and WP10PN in Wales), they may prescribe using the same system as doctors in the clinic.)

Incontinence Appliances as listed in Part IXB of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 5 of the Scottish Drug Tariff).

Stoma Appliances and Associated Products as listed in Part IXC of the Drug Tariff (Part III of the Northern Ireland Drug Tariff, Part 6 of the Scottish Drug Tariff).

Chemical Reagents as listed in Part IXR of the Drug Tariff (Part II of the Northern Ireland Drug Tariff, Part 9 of the Scottish Drug Tariff).

The Drug Tariffs can be accessed online at:

National Health Service Drug Tariff for England and Wales: www.nhsbsa.nhs.uk/pharmacies-gp-practices-and-appliance-contractors/drug-tariff

Health and Personal Social Services for Northern Ireland Drug Tariff: www.hscbusiness.hscni.net/services/2034.htm

Scottish Drug Tariff: www.isdscotland.org/Health-topics/Prescribing-and-Medicines/Scottish-Drug-Tariff/

Details of NPF preparations

Preparations on the Nurse Prescribers' Formulary which are not included in the BP or BPC are described as follows in the Nurse Prescribers' Formulary. Although brand names have sometimes been included for identification purposes, it is recommended that non-proprietary names should be used for prescribing medicinal preparations in the NPF except where a non-proprietary name is not available.

- **Arachis oil enema**
  - arachis oil 100%
- **Catheter maintenance solution, sodium chloride**
  - (proprietary products: *OptiFlo S; Uro-Tainer Sodium Chloride; Uriflex-S*), sodium chloride 0.9%
- **Catheter maintenance solution, 'Solution G'**
  - (proprietary products: *OptiFlo G; Uro-Tainer Suby G; Uriflex G*), citric acid 3.23%, magnesium oxide 0.38%, sodium bicarbonate 0.7%, disodium edetate 0.01%
- **Catheter maintenance solution, 'Solution R'**
  - (proprietary products: *OptiFlo R; Uro-Tainer Solutio R; Uriflex R*), citric acid 6%, gluconolactone 0.6%, magnesium carbonate 2.8%, disodium edetate 0.01%
- **Chlorhexidine gluconate alcoholic solutions**
  - (proprietary products: *ChloraPrep; Hydrex Solution; Hydrex spray*), chlorhexidine gluconate in alcoholic solution
- **Chlorhexidine gluconate aqueous solutions**
  - (proprietary product: *Unisept*), chlorhexidine gluconate in aqueous solution
- **Co-danthramer capsules** PoM
  - co-danthramer 25/200 (dantron 25 mg, poloxamer '188' 200 mg)
- **Co-danthramer capsules, strong** PoM
  - co-danthramer 37.5/500 (dantron 37.5 mg, poloxamer '188' 500 mg)
- **Co-danthramer oral suspension** PoM
  - co-danthramer 25/200 in 5 mL (dantron 25 mg, poloxamer '188' 200 mg/5 mL)
- **Co-danthramer oral suspension, strong** PoM
  - co-danthramer 75/1000 in 5 mL (dantron 75 mg, poloxamer '188' 1 g/5 mL)
- **Co-danthrusate oral suspension** PoM
  - (proprietary product: *Normax*), co-danthrusate 50/60 (dantron 50 mg, docusate sodium 60 mg/5 mL)
- **Dimeticone barrier creams**
  - (proprietary products *Conotrane Cream*, dimeticone '350' 22%; *Siopel Barrier Cream*, dimeticone '1000' 10%), dimeticone 10–22%
- **Dimeticone lotion**
  - (proprietary product: *Hedrin*), dimeticone 4%
- **Docusate enema**
  - (proprietary product: *Norgalax Micro-enema*), docusate sodium 120 mg in 10 g
- **Liquid and white soft paraffin ointment**
  - liquid paraffin 50%, white soft paraffin 50%
- **Macrogol oral liquid, compound**
  - (proprietary product: *Movicol Liquid*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/25 mL
- **Macrogol oral powder, compound**
  - (proprietary products: *Laxido Orange, Molaxole, Movicol*), macrogol '3350' (polyethylene glycol '3350') 13.125 g, sodium bicarbonate 178.5 mg, sodium chloride 350.7 mg, potassium chloride 46.6 mg/sachet; (amount of potassium chloride varies according to flavour of *Movicol*® as follows: plain-flavour (sugar-free) = 50.2 mg/sachet; lime and lemon flavour = 46.6 mg/sachet; chocolate flavour = 31.7 mg/sachet. 1 sachet when reconstituted with 125 mL water provides K^+ 5.4 mmol/litre)
- **Macrogol oral powder, compound, half-strength**
  - (proprietary product: *Movicol-Half*), macrogol '3350' (polyethylene glycol '3350') 6.563 g, sodium bicarbonate 89.3 g, sodium chloride 175.4 mg, potassium chloride 23.3 mg/sachet
- **Malathion aqueous lotions**
  - (proprietary products: *Derbac-M Liquid*), malathion 0.5% in an aqueous basis
- **Mebendazole oral suspension** PoM
  - (proprietary product: *Vermox*), mebendazole 100 mg/5 mL
- **Mebendazole tablets** PoM
  - (proprietary products: *Ovex, Vermox*), mebendazole 100 mg (can be supplied for oral use in the treatment of enterobiasis in adults and children over 2 years provided its container or package is labelled to show a max. single dose of 100 mg and it is supplied in a container or package containing not more than 800 mg)
- **Mouthwash solution-tablets**
  - consist of tablets which may contain antimicrobial, colouring and flavouring agents in a suitable soluble effervescent basis to make a mouthwash
- **Nicotine inhalation cartridge for oromucosal use**
  - (proprietary products: *NicAssist Inhalator, Nicorette Inhalator*), nicotine 15 mg (for use with inhalation mouthpiece; to be prescribed as either a starter pack (6 cartridges with inhalator device and holder) or refill pack (42 cartridges with inhalator device)
- **Nicotine lozenge**
  - nicotine (as bitartrate) 1 mg or 2 mg (proprietary product: *Nicorette Mint Lozenge, Nicotinell Mint Lozenge*), or nicotine (as resinate) 1.5 mg, 2 mg, or 4 mg (proprietary product: *NiQuitin Lozenges, NiQuitin Minis, NiQuitin Pre-quit*)
- **Nicotine medicated chewing gum**
  - (proprietary products: *NicAssist Gum, Nicorette Gum, Nicotinell Gum, NiQuitin Gum*), nicotine 2 mg or 4 mg
- **Nicotine nasal spray**
  - (proprietary product: *NicAssist Nasal Spray, Nicorette Nasal Spray*), nicotine 500 micrograms/metered spray
- **Nicotine oral spray**
  - (proprietary product: *Nicorette Quickmist*), nicotine 1 mg/metered spray
- **Nicotine sublingual tablets**
  - (proprietary product: *NicAssist Microtab, Nicorette Microtab*), nicotine (as a cyclodextrin complex) 2 mg (to be prescribed as either a starter pack (2 × 15-tablet discs with dispenser) or refill pack (7 × 15-tablet discs))
- **Nicotine transdermal patches**
  - releasing in each 16 hours, nicotine approx. 5 mg, 10 mg, or 15 mg (proprietary products: *Boots NicAssist Patch, Nicorette Patch*), or releasing in each 16 hours approx. 10 mg, 15 mg, or 25 mg (proprietary products: *NicAssist Translucent Patch, Nicorette Invisi Patch*), or releasing in each 24 hours nicotine approx. 7 mg, 14 mg, or 21 mg (proprietary products: *Nicopatch, Nicotinell TTS, NiQuitin,*

NiQuitin Clear) (prescriber should specify the brand to be dispensed)

- **Permethrin cream**
  - (proprietary product: *Lyclear Dermal Cream*), permethrin 5%
- **Senna oral solution**
  - (proprietary product: *Senokot Syrup*), sennosides 7.5 mg/5 mL
- **Senna and ispaghula granules**
  - (proprietary product: *Manevac Granules*), senna fruit 12.4%, ispaghula 54.2%
- **Sodium citrate compound enema**
  - (proprietary products: *Micolette Micro-enema; Micralax Micro-enema; Relaxit Micro-enema*), sodium citrate 450 mg with glycerol, sorbitol and an anionic surfactant
- **Sodium picosulfate capsules**
  - (proprietary products: *Dulcolax Perles*), sodium picosulfate 2.5 mg
- **Sodium picosulfate elixir**
  - (proprietary product: *Dulcolax Liquid*), sodium picosulfate 5 mg/5 mL
- **Sterculia granules**
  - (proprietary product: *Normacol Granules*), sterculia 62%
- **Sterculia and frangula granules**
  - (proprietary product: *Normacol Plus Granules*), sterculia 62%, frangula (standardised) 8%
- **Zinc oxide and dimeticone spray**
  - (proprietary product: *Sprilon*), dimeticone 1.04%, zinc oxide 12.5% in a pressurised aerosol unit
- **Zinc oxide impregnated medicated bandage**
  - (proprietary product: *Steripaste*), sterile cotton bandage impregnated with paste containing zinc oxide 15%
- **Zinc oxide impregnated medicated stocking**
  - (proprietary product: *Zipzoc*), sterile rayon stocking impregnated with ointment containing zinc oxide 20%

Non-medical prescribing

Overview

A range of non-medical healthcare professionals can prescribe medicines for patients as either Independent or Supplementary Prescribers.

Independent prescribers are practitioners responsible and accountable for the assessment of patients with previously undiagnosed or diagnosed conditions and for decisions about the clinical management required, including prescribing. They are recommended to prescribe generically, except where this would not be clinically appropriate or where there is no approved non-proprietary name.

Supplementary prescribing is a partnership between an independent prescriber (a doctor or a dentist) and a supplementary prescriber to implement an agreed Clinical Management Plan for an individual patient with that patient's agreement.

Independent and Supplementary Prescribers are identified by an annotation next to their name in the relevant professional register.

Information and guidance on non-medical prescribing is available on the Department of Health website at www.dh.gov.uk/health/2012/04/prescribing-change.

For information on the mixing of medicines by Independent and Supplementary Prescribers, see *Mixing of medicines prior to administration in clinical practice: medical and non-medical prescribing*, National Prescribing Centre, May 2010 (available at www.gov.uk/government/publications/mixing-of-medicines-prior-to-administration-in-clinical-practice-medical-and-non-medical-prescribing).

For information on the supply and administration of medicines to groups of patients using Patient Group Directions see Guidance on prescribing p. 1.

In order to protect patient safety, the initial prescribing and supply of medicines prescribed should normally remain separate functions performed by separate healthcare professionals.

Nurses

Nurse Independent Prescribers (formerly known as Extended Formulary Nurse Prescribers) are able to prescribe any medicine for any medical condition. Unlicensed medicines are excluded from the Nurse Prescribing Formulary in Scotland.

Nurse Independent Prescribers are able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 488, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Nurse Independent Prescribers must work within their own level of professional competence and expertise.

The Approved list for prescribing by Community Practitioner Nurse Prescribers (NPF) p. 1792 for Community Practitioners provides information on prescribing.

Pharmacists

Pharmacist Independent Prescribers can prescribe any medicine for any medical condition. This includes unlicensed medicines, subject to accepted clinical good practice.

They are also able to prescribe, administer, and give directions for the administration of Schedule 2, 3, 4, and 5 Controlled Drugs. This extends to diamorphine hydrochloride p. 488, dipipanone, or cocaine for treating organic disease or injury, but not for treating addiction.

Pharmacist Independent Prescribers must work within their own level of professional competence and expertise.

Physiotherapists

Physiotherapist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs: oral or injectable morphine p. 496, transdermal fentanyl p. 490 and oral diazepam p. 375, dihydrocodeine tartrate p. 489, lorazepam p. 369, oxycodone hydrochloride p. 498 or temazepam p. 520.

Physiotherapist Independent Prescribers must work within their own level of professional competence and expertise.

Therapeutic radiographers

Therapeutic Radiographer Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Therapeutic Radiographer Independent Prescribers must work within their own level of professional competence and expertise.

Optometrists

Optometrist Independent Prescribers can prescribe any licensed medicine for ocular conditions affecting the eye and the tissues surrounding the eye, except Controlled Drugs or medicines for parenteral administration. Optometrist Independent Prescribers must work within their own level of professional competence and expertise.

Podiatrists

Podiatrist Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. They are also allowed to prescribe the following Controlled Drugs for oral administration: diazepam p. 375, dihydrocodeine tartrate p. 489, lorazepam p. 369 and temazepam p. 520.

Podiatrist Independent Prescribers must work within their own level of professional competence and expertise.

Paramedics

Paramedic Independent Prescribers can prescribe any medicine for any medical condition. This includes "off-label" medicines subject to accepted clinical good practice. Prescribing of Controlled Drugs is subject to legislative changes. Paramedic Independent Prescribers must work within their own level of professional competence and expertise.

Further Information

For further details about the different types of prescribers, see *Medicines, Ethics and Practice*, London, Pharmaceutical Press (always consult latest edition).

Index of manufacturers

The following is an alphabetical list of manufacturers and other companies referenced in the BNF, with their medicines information or general contact details. For information on ‘special-order’ manufacturers and specialist importing companies see ‘Special-order manufacturers’.

Special-order manufacturers

Unlicensed medicines are available from 'special-order' manufacturers and specialist-importing companies; the MHRA maintains a register of these companies at www.gov.uk/government/publications/human-and-veterinary-medicines-register-of-licensed-manufacturing-sites.

Licensed **hospital manufacturing units** also manufacture 'special-order' products as unlicensed medicines, the principal NHS units are listed below. A database (*Pro-File*; www.pro-file.nhs.uk) provides information on medicines manufactured in the NHS; access is restricted to NHS pharmacy staff.

The Association of Pharmaceutical Specials Manufacturers may also be able to provide further information about commercial companies (www.apsm-uk.com).

The MHRA recommends that an unlicensed medicine should only be used when a patient has special requirements that cannot be met by use of a licensed medicine.

As well as being available direct from the hospital manufacturer(s) concerned, many NHS-manufactured Specials may be bought from the Oxford Pharmacy Store, owned and operated by Oxford Health NHS Foundation Trust.

Recommended wording of cautionary and advisory labels

For details including Welsh Language translation see p. 1764

1 Warning: This medicine may make you sleepy

2 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines. Do not drink alcohol

3 Warning: This medicine may make you sleepy. If this happens, do not drive or use tools or machines

4 Warning: Do not drink alcohol

5 Do not take indigestion remedies 2 hours before or after you take this medicine

6 Do not take indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine

7 Do not take milk, indigestion remedies, or medicines containing iron or zinc, 2 hours before or after you take this medicine

8 Warning: Do not stop taking this medicine unless your doctor tells you to stop

9 Space the doses evenly throughout the day. Keep taking this medicine until the course is finished, unless you are told to stop

10 Warning: Read the additional information given with this medicine

11 Protect your skin from sunlight—even on a bright but cloudy day. Do not use sunbeds

12 Do not take anything containing aspirin while taking this medicine

13 Dissolve or mix with water before taking

14 This medicine may colour your urine. This is harmless

15 Caution: flammable. Keep your body away from fire or flames after you have put on the medicine

16 Dissolve the tablet under your tongue—do not swallow. Store the tablets in this bottle with the cap tightly closed. Get a new supply 8 weeks after opening

17 Do not take more than... in 24 hours

18 Do not take more than... in 24 hours. Also, do not take more than... in any one week

19 Warning: This medicine makes you sleepy. If you still feel sleepy the next day, do not drive or use tools or machines. Do not drink alcohol

21 Take with or just after food, or a meal

22 Take 30 to 60 minutes before food

23 Take this medicine when your stomach is empty. This means an hour before food or 2 hours after food

24 Suck or chew this medicine

25 Swallow this medicine whole. Do not chew or crush

26 Dissolve this medicine under your tongue

27 Take with a full glass of water

28 Spread thinly on the affected skin only

29 Do not take more than 2 at any one time. Do not take more than 8 in 24 hours

30 Contains paracetamol. Do not take anything else containing paracetamol while taking this medicine. Talk to a doctor at once if you take too much of this medicine, even if you feel well

32 Contains aspirin. Do not take anything else containing aspirin while taking this medicine

Approximate Conversions and Units

Conversion of pounds to kilograms

lb	kg
1	0.45
2	0.91
3	1.36
4	1.81
5	2.27
6	2.72
7	3.18
8	3.63
9	4.08
10	4.54
11	4.99
12	5.44
13	5.90
14	6.35

Conversion of stones to kilograms

stones	kg
1	6.35
2	12.70
3	19.05
4	25.40
5	31.75
6	38.10
7	44.45
8	50.80
9	57.15
10	63.50
11	69.85
12	76.20
13	82.55
14	88.90
15	95.25

Conversion from millilitres to fluid ounces

mL	fl oz
50	1.8
100	3.5
150	5.3
200	7.0
500	17.6
1000	35.2

Length

1 metre (m) = 1000 millimetres (mm)
1 centimetre (cm) = 10 mm
1 inch (in) = 25.4 mm
1 foot (ft) = 12 inches
12 inches = 304.8 mm

Mass

1 kilogram (kg) = 1000 grams (g)
1 gram (g) = 1000 milligrams (mg)
1 milligram (mg) = 1000 micrograms
1 microgram = 1000 nanograms
1 nanogram = 1000 picograms

Volume

1 litre = 1000 millilitres (mL)
1 millilitre (1 mL) = 1000 microlitres
1 pint ≈ 568 mL

Other units

1 kilocalorie (kcal) = 4186.8 joules (J)
1000 kilocalories (kcal) = 4.1868 megajoules (MJ)
1 megajoule (MJ) = 238.8 kilocalories (kcal)
1 millimetre of mercury (mmHg) = 133.3 pascals (Pa)
1 kilopascal (kPa) = 7.5 mmHg (pressure)

Plasma-drug concentrations

Plasma-drug concentrations in BNF publications are expressed in mass units per litre (e.g. mg/litre). The approximate equivalent in terms of amount of substance units (e.g. micromol/litre) is given in brackets.

Prescribing for children: weight, height, and sex

The table below shows the **mean values** for weight, height, and sex by age; these values have been derived from the UK-WHO growth charts 2009 and UK 1990 standard centile charts, by extrapolating the 50th centile, and may be used to calculate doses in the absence of measurements. However, an individual's weight and height might vary considerably from the values in the table and it is important to ensure that the value chosen is appropriate. In most cases the actual measurement should be obtained as soon as possible and the dose re-calculated.

Age	Weight (kg)	Height (cm)
Full-term neonate	3.5	51
1 month	4.3	55
2 months	5.4	58
3 months	6.1	61
4 months	6.7	63
6 months	7.6	67
1 year	9	75
3 years	14	96
5 years	18	109
7 years	23	122
10 years	32	138
12 years	39	149
14 year old boy	49	163
14 year old girl	50	159
Adult male	68	176
Adult female	58	164

Abbreviations and Symbols

Internationally recognised units and symbols are used in the BNF publications where possible.

Latin abbreviations

Directions should be in English without abbreviation. However, Latin abbreviations have been used when prescribing.

The following is a list of appropriate abbreviations. It should be noted that the English version is not always an exact translation.

a. c. = ante cibum (before food)
b. d. = bis die (twice daily)
o. d. = omni die (every day)
o. m. = omni mane (every morning)
o. n. = omni nocte (every night)
p. c. = post cibum (after food)
p. r. n. = pro re nata (when required)
q. d. s. = quater die sumendum (to be taken four times daily)
q. q. h. = quarta quaque hora (every four hours)
stat = immediately
t. d. s. = ter die sumendum (to be taken three times daily)
t.i.d. = ter in die (three times daily)

E numbers

The following is a list of common E numbers and the inactive ingredients to which they correspond.

E102	Tartrazine
E104	Quinoline Yellow
E110	Sunset Yellow FCF
E123	Amaranth
E124	Ponceau 4R
E127	Erythrosine BS
E132	Indigo Carmine
E142	Green S
E171	Titanium Dioxide
E172	Iron oxides, iron hydroxides
E200	Sorbic Acid
E211	Sodium Benzoate
E223	Sodium Metabisulfite
E320	Butylated Hydroxyanisole
E321	Butylated Hydroxytoluene
E322	Lecithins
E420	Sorbitol
E421	Mannitol
E422	Glycerol
E901	Beeswax (white and yellow)
E1520	Propylene Glycol

Medical emergencies in the community

13-Oct-2021

Overview

Drug treatment outlined below is intended for use by appropriately qualified healthcare professionals . Only drugs that are used for immediate relief are shown; advice on supporting care is not given. Where the patient's condition requires investigation and further treatment, the patient should be transferred to hospital promptly.

Acute coronary syndromes

▶ ANGINA: UNSTABLE

Aspirin dispersible tablets p. 133 (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

- Adult: 300 mg

▶ PLUS

▶ EITHER **Glyceryl trinitrate aerosol spray p. 237** (400 micrograms/metered dose)

SUBLINGUALLY

- Adult: 1–2 sprays, repeated as required

▶ OR **Glyceryl trinitrate tablets** (300 micrograms, 500 micrograms, 600 micrograms)

SUBLINGUALLY

- Adult: 0.3–1 mg, repeated as required

▶ MYOCARDIAL INFARCTION: NON-ST-SEGMENT ELEVATION

Treat as for Angina: unstable

▶ MYOCARDIAL INFARCTION: ST-SEGMENT ELEVATION

Aspirin dispersible tablets (75 mg, 300 mg)

BY MOUTH (DISPERSED IN WATER OR CHEWED)

- Adult: 300 mg

Glyceryl trinitrate aerosol spray (400 micrograms/metered dose)

SUBLINGUALLY

- Adult: 1–2 sprays, repeated as required

▶ OR **Glyceryl trinitrate tablets** (300 micrograms, 500 micrograms, 600 micrograms)

SUBLINGUALLY

- Adult: 0.3–1 mg, repeated as required

Metoclopramide hydrochloride injection p. 464 (5 mg/mL)

BY INTRAVENOUS INJECTION

- Adult 18-19 years (body-weight up to 60 kg): 5 mg
- Adult 18-19 years (body-weight 60 kg and over): 10 mg
- Adult over 19 years: 10 mg

Diamorphine hydrochloride injection p. 488 (5 mg powder for reconstitution)

BY SLOW INTRAVENOUS INJECTION (1-2 MG/MINUTE)

- Adult: 5 mg followed by a further 2.5–5 mg if necessary
- Elderly or frail patients: reduce dose by half

▶ OR **Morphine sulfate injection p. 496** (10 mg/mL)

BY SLOW INTRAVENOUS INJECTION (1-2 MG/MINUTE)

- Adult: 5–10 mg followed by a further 5–10 mg if necessary
- Elderly or frail patients: reduce dose by half

Oxygen, if appropriate

Airways disease, obstructive

▶ ASTHMA: ACUTE

EvGr Emergency asthma consultations should be regarded as being for severe acute asthma until shown otherwise. Patients with features of severe or life-threatening acute asthma, and patients who fail to respond adequately at any time should be referred to hospital immediately. Acute asthma in children aged under 2 years should be managed in hospital. A

High-flow **oxygen** should be given if available (via tight-fitting face mask in children) to achieve and maintain an SpO_2 level of 94-98%.

▶ EITHER **Salbutamol aerosol inhaler p. 273** (100 micrograms/metered inhalation)

BY AEROSOL INHALATION VIA LARGE-VOLUME SPACER (AND A CLOSE-FITTING FACE MASK IF CHILD UNDER 3 YEARS)

- Adult and child: 2–10 puffs each inhaled separately, repeated every 10–20 minutes or as necessary

▶ OR **Salbutamol nebuliser solution** (1 mg/mL, 2 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- Child 4 years and below: 2.5 mg every 20–30 minutes or as necessary
- Child 5-11 years: 2.5–5 mg every 20–30 minutes or as necessary
- Child 12-17 years: 5 mg every 20–30 minutes or as necessary
- Adult: 5 mg every 20–30 minutes or as necessary

▶ OR **Terbutaline sulfate nebuliser solution p. 275** (2.5 mg/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- Child 4 years and below: 5 mg every 20–30 minutes or as necessary
- Child 5-11 years: 5–10 mg every 20–30 minutes or as necessary
- Child 12-17 years: 10 mg every 20–30 minutes or as necessary
- Adult: 10 mg every 20–30 minutes or as necessary

▶ PLUS **(in all cases)**

▶ EITHER **Prednisolone tablets p. 747 (*or* prednisolone soluble tablets)** (5 mg)

BY MOUTH

- Child 11 years and below: 1–2 mg/kg (max. 40 mg) once daily for up to 3 days or longer if necessary; if child has been taking an oral corticosteroid for more than a few days, give prednisolone 2 mg/kg (max. 60 mg) once daily
- Child 12-17 years: 40–50 mg once daily for at least 5 days
- Adult: 40–50 mg once daily for at least 5 days

▶ OR **Hydrocortisone p. 744 (preferably as sodium succinate)**

BY INTRAVENOUS INJECTION

- Child 17 years and below: 4 mg/kg (max. 100 mg) every 6 hours until conversion to oral prednisolone is possible; alternative dose if weight unavailable:
  - Child 1 year and below: 25 mg
  - Child 2-4 years: 50 mg
  - Child 5-17 years: 100 mg
- Adult: 100 mg every 6 hours until conversion to oral prednisolone is possible

Monitor response 15 to 30 minutes after nebulisation; if any signs of acute asthma persist, arrange hospital admission. While awaiting ambulance, repeat **nebulised beta$_2$ agonist** (as above) and give with

Ipratropium bromide nebuliser solution p. 267 (250 micrograms/mL)

BY INHALATION OF NEBULISED SOLUTION (VIA OXYGEN-DRIVEN NEBULISER IF AVAILABLE)

- Child 11 years and below: 250 micrograms, repeated every 20–30 minutes for the first 2 hours, then every 4–6 hours as necessary
- Child 12-17 years: 500 micrograms every 4–6 hours as necessary
- Adult: 500 micrograms every 4–6 hours as necessary

▶ **CROUP**

Dexamethasone oral solution p. 743 (2 mg/5 mL)

BY MOUTH

- Child 1 month-2 years: 150 micrograms/kg as a single dose

Anaphylaxis

▶ **ANAPHYLAXIS**

Adrenaline/epinephrine injection p. 241 (1 mg/mL (1 in 1000))

BY INTRAMUSCULAR INJECTION

- Child up to 6 months: 100–150 micrograms (0.1–0.15 mL), repeated after 5 minutes if necessary
- Child 6 months-5 years: 150 micrograms (0.15 mL), repeated after 5 minutes if necessary
- Child 6-11 years: 300 micrograms (0.3 mL), repeated after 5 minutes if necessary
- Child 12-17 years: 500 micrograms (0.5 mL), repeated after 5 minutes if necessary; 300 micrograms (0.3 mL) should be given if child is small or prepubertal
- Adult: 500 micrograms (0.5 mL), repeated after 5 minutes if necessary

If life-threatening features persist, further doses of intramuscular adrenaline/epinephrine can be given every 5 minutes until specialist critical care available.

High-flow **oxygen** should be given as soon as available. For guidance on other treatment that may be used for the management of anaphylaxis, *see* Antihistamines, allergen immunotherapy and allergic emergencies p. 299.

Bacterial infection

▶ **MENINGOCOCCAL DISEASE**

Benzylpenicillin sodium injection p. 595 (600 mg, 1.2 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- Neonate: 300 mg
- Child 1 month-11 months: 300 mg
- Child 1-9 years: 600 mg
- Child 10-17 years: 1.2 g
- Adult: 1.2 g

NOTE A single dose should be given before urgent transfer to hospital, so long as this does not delay the transfer.

▶ OR **if history of allergy to penicillin**

Cefotaxime injection p. 572 (1 g)

BY INTRAVENOUS INJECTION (OR BY INTRAMUSCULAR INJECTION IF VENOUS ACCESS NOT AVAILABLE)

- Neonate: 50 mg/kg
- Child 1 month-11 years: 50 mg/kg (max. 1 g)
- Child 12-17 years: 1 g
- Adult: 1 g

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

▶ OR **if history of immediate hypersensitivity reaction (including anaphylaxis, angioedema, urticaria, or rash immediately after administration) to penicillin or to cephalosporins**

Chloramphenicol injection p. 620 (1 g)

BY INTRAVENOUS INJECTION

- Child: 12.5–25 mg/kg
- Adult: 12.5–25 mg/kg

NOTE A single dose can be given before urgent transfer to hospital, so long as this does not delay the transfer.

See also Central nervous system infections, antibacterial therapy p. 546.

Hypoglycaemia

▶ **DIABETIC HYPOGLYCAEMIA**

Fast-acting carbohydrate (glucose p. 1132 is preferred)

CHILD UP TO 5 YEARS

By mouth

- 5 g (20 mL *Lift*® (previously *Glucojuice*®) oral glucose liquid *or* 1.5 glucose tablets *or* half a tube of glucose 40% oral gel *or* 1 teaspoonful of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

- 5 g (half a tube of glucose 40% oral gel), repeated after 15 minutes if necessary

CHILD 5-11 YEARS

By mouth

- 10 g (40 mL *Lift*® (previously *Glucojuice*®) oral glucose liquid *or* 3 glucose tablets *or* 1 tube of glucose 40% oral gel *or* 2 teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

- 10 g (1 tube of glucose 40% oral gel), repeated after 15 minutes if necessary

CHILD 12-17 YEARS

By mouth

- 15 g (60 mL *Lift*® (previously *Glucojuice*®) oral glucose liquid *or* 4 glucose tablets *or* 1.5 tubes of glucose 40% oral gel *or* 3 teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative children]

- 15 g (1.5 tubes of glucose 40% oral gel), repeated after 15 minutes if necessary

ADULT

By mouth

- 15–20 g (60–80 mL *Lift*® (previously *Glucojuice*®) oral glucose liquid *or* 4–5 glucose tablets *or* 1.5–2 tubes of glucose 40% oral gel *or* 150–200 mL pure fruit juice *or* 3–4 heaped teaspoonfuls of sugar dissolved in an appropriate volume of water), repeated after 15 minutes if necessary

Or by buccal administration [in conscious but uncooperative patients]

- 15–20 g (1.5–2 tubes of glucose 40% oral gel), repeated after 15 minutes if necessary

NOTE Examples of glucose preparations which can be used to give oral doses are based on the use of oral liquid containing glucose 250 mg/mL and tablets containing glucose 4 g per tablet. Buccal dosing is based on tubes of 40% oral gel containing glucose 10 g per tube.

▶ OR **if hypoglycaemia unresponsive *or* if oral route cannot be used**

Glucagon injection p. 793 (1 mg/mL)

BY INTRAMUSCULAR INJECTION

- Child 8 years and below or body-weight up to 25 kg: 500 micrograms (0.5 mL)
- Child 9-17 years or body-weight 25 kg and over: 1 mg (1 mL)
- Adult: 1 mg (1 mL)

- OR **if hypoglycaemia prolonged *or* unresponsive to glucagon after 10 minutes**

Glucose 10% intravenous infusion

BY INTRAVENOUS INJECTION INTO LARGE VEIN
- Child: 5 mL/kg (glucose 500 mg/kg)
- Adult: 150–200 mL infused over 15 minutes

- OR **Glucose 20% intravenous infusion**

BY INTRAVENOUS INJECTION INTO LARGE VEIN
- Adult: 75–100 mL infused over 15 minutes

Seizures

CONVULSIVE (INCLUDING FEBRILE) SEIZURES LASTING LONGER THAN 5 MINUTES

- EITHER **Diazepam rectal solution p. 375** (2 mg/mL, 4 mg/mL)

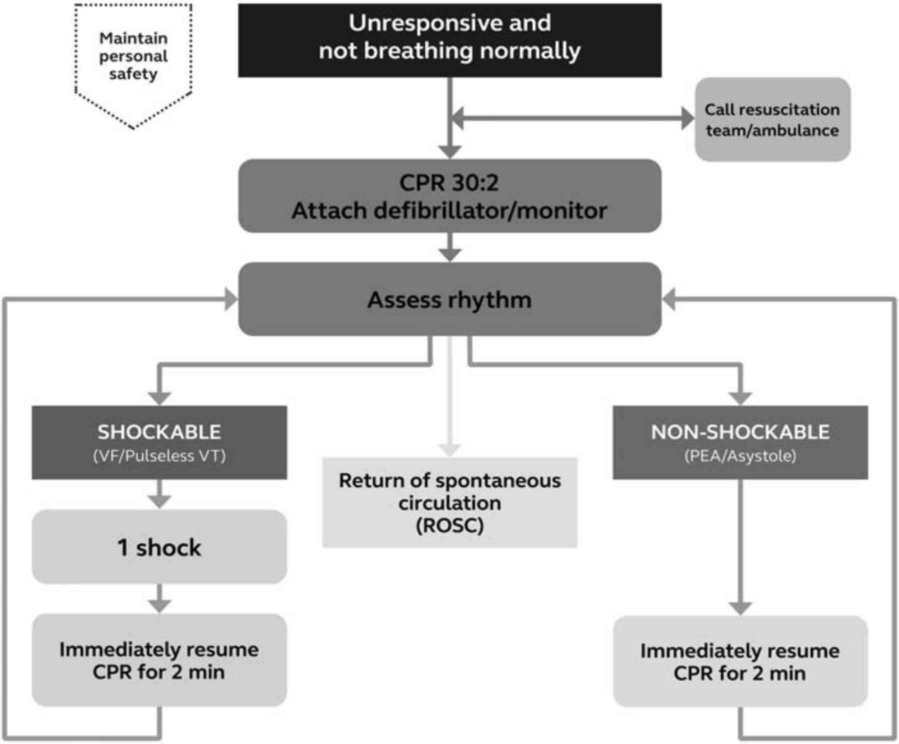
BY RECTUM
- Neonate: 1.25–2.5 mg, repeated once after 10–15 minutes if necessary
- Child 1 month-1 year: 5 mg, repeated once after 10–15 minutes if necessary
- Child 2-11 years: 5–10 mg, repeated once after 10–15 minutes if necessary
- Child 12-17 years: 10–20 mg, repeated once after 10–15 minutes if necessary
- Adult: 10–20 mg, repeated once after 10–15 minutes if necessary
- Elderly: 10 mg, repeated once after 10–15 minutes if necessary

- OR **Midazolam oromucosal solution p. 371**

BY BUCCAL ADMINISTRATION, REPEATED ONCE AFTER 10 MINUTES IF NECESSARY
- Neonate: 300 micrograms/kg [unlicensed]
- Child 1-2 months: 300 micrograms/kg (max. 2.5 mg) [unlicensed]
- Child 3 months-11 months: 2.5 mg
- Child 1-4 years: 5 mg
- Child 5-9 years: 7.5 mg
- Child 10-17 years: 10 mg
- Adult: 10 mg [unlicensed]

Adult Advanced Life Support Algorithm

Adult advanced life support



Maintain personal safety
Unresponsive and not breathing normally
Call resuscitation team/ambulance
CPR 30:2
Attach defibrillator/monitor
Assess rhythm
SHOCKABLE
(VF/Pulseless VT)
1 shock
Immediately resume CPR for 2 min
Return of spontaneous circulation (ROSC)
NON-SHOCKABLE
(PEA/Asystole)
Immediately resume CPR for 2 min

Give high-quality chest compressions, and:

- Give oxygen
- Use waveform capnography
- Continuous compressions if advanced airway
- Minimise interruptions to compressions
- Intravenous or intraosseous access
- Give adrenaline every 3–5 min
- Give amiodarone after 3 shocks
- Identify and treat reversible causes

Identify and treat reversible causes

- Hypoxia
- Hypovolaemia
- Hypo-/hyperkalaemia/ metabolic
- Hypo/hyperthermia
- Thrombosis – coronary or pulmonary
- Tension pneumothorax
- Tamponade – cardiac
- Toxins

Consider ultrasound imaging to identify reversible causes

Consider

- Coronary angiography/ percutaneous coronary intervention
- Mechanical chest compressions to facilitate transfer/treatment
- Extracorporeal CPR

After ROSC

- Use an ABCDE approach
- Aim for SpO_2 of 94–98% and normal $PaCO_2$
- 12-lead ECG
- Identify and treat cause
- Targeted temperature management
